

## More Trains, More Services Kiama Station

Transport for NSW | June – July 2022

### More Trains, More Services

The More Trains, More Services program is delivering platform extensions and rail asset upgrades between Sydney's CBD and the South Coast to support the introduction of the Mariyung fleet.

### What's next at Kiama?

Having already extended both ends of Platforms 1 and 2 by eight metres at Kiama Station, the project team have moved off the platforms and into the rail corridor. In the coming months, we will continue working on asset upgrades inside the rail corridor between the Kiama Smash Repairs and Kiama Station. Our main activities include installation of overhead wiring footings, construction of new underground cable routes and drainage upgrades.

### Upcoming night work

In June, some activities are required to take place outside of standard construction hours between **6pm Friday 17 June and 7am Monday 20 June**.

This work has been scheduled to take place during Sydney Trains trackwork periods when no trains are running, minimising disruptions to commuter services and improving the safety of our construction team and customers.

We understand construction activities may cause disruption to our closest neighbours, and every effort will be made to minimise the impacts where possible.

### Standard construction hours

Standard construction hours on this project are **7am-6pm Monday to Friday and 8am-1pm on Saturdays**.

### You might hear us working to build a better network

Our construction activities in June and July include use of vacuum trucks, excavators with rock breakers, concrete trucks and spoil trucks.

If noise is anticipated to be intrusive at your address, we will contact you directly to discuss additional mitigation measures specific to your situation.

We would like to apologise in advance for any disruption you may experience as we work to upgrade the network for future service improvements.

### Minimising community impacts

We understand construction activities may cause disruption to our closest neighbours, and every effort will be made to minimise the impacts where possible, including conducting on-site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration, and dust management.
