More Trains, More Services

Wolli Creek Power Supply Upgrade Project

Over the next ten years the More Trains, More Services program will simplify and modernise the rail network, creating turn up and go services for many customers. It means customers can expect more frequent train services, with less wait times, less crowding and more seats on a simpler, more reliable network.

Project update

Early work and preliminary site investigations started in August with site establishment and main construction work starting in the coming months. Construction will take around two and a half years to complete.

Work we are doing to improve the network for customers and our staff

The works at Wolli Creek include:

- Getting more power to the train network to run the new trains that are coming on the T4 and T8 lines. We are doing this by building a new electrical substation within the rail corridor at Wolli Creek Junction
- removing the Undercliffe electrical substation and Wolli Creek sectioning hut
- realigning and installing new overhead wiring and signalling so the trains can operate safely and efficiently.

What you will notice

Activities being undertaken in September include:

- site investigation work
- survey and geotechnical investigations
- laydown area established for materials and equipment
- condition assessments.

Staying Safe

We are continuing to deliver projects across NSW while ensuring the safety of all staff and the community. In line with current Australian Government guidelines around slowing the spread of Coronavirus and social distancing, all work will be carried out at a safe physical distance where possible and necessary hygiene practices will be observed.

Construction hours

To support the industry and continue the delivery of critical infrastructure, the NSW Government has introduced new rules allowing construction sites to operate on weekends and public holidays.

Standard construction hours are now 7am to 6pm every day, including public holidays.

These changes have been made to make sure we can keep our work sites safe through social distancing and support the health and wellbeing of our workers.

The project team understands extending construction hours to weekends and public holidays may cause disruption for the community but all efforts will be made to minimise impacts where possible and ensure we adhere to strict environmental conditions relating to noise, vibration and dust management.
