

M6 Stage 1

Asbestos Factsheet

We are underway with our work to build your new and upgraded community facilities as part of the M6 Stage 1 project.

Asbestos management

As part of our work, excavation and clearing will take place in some areas. These activities may result in the discovery of asbestos.

Discovering these materials is not an unusual occurrence as it was common for asbestos to be used in a range of building and construction material up until 1987.

What is asbestos?

There are two main types of asbestos.

- **Bonded asbestos** is the most commonly found asbestos in the built environment. It is firmly interwoven within a material and, under normal circumstances, is unlikely to become airborne. Examples include roofing material, ceiling tiles, floor tiles, cement sheeting, gutters, rainwater pipes and water tanks.
- **Non-bonded asbestos** can be crumbled or reduced to powder by hand pressure when dry and is easier to release into the air when disturbed. Examples include insulation around pipes, electrical equipment and concrete formwork.

Who can I talk to if I have an enquiry?

If you would like further information, please contact the project team on [1800 789 297](tel:1800789297) or email M6Stage1@transport.nsw.gov.au

How do we manage asbestos material?

The potential for asbestos material was identified in the Review of Environmental Factors (REF) for the community recreational facilities.

We have also identified controls as part of the Construction Environmental Management Plan (CEMP) and other site specific management plans.

To view the REF, visit our interactive portal at nswroads.work/M6portal

Our CEMP includes an Unexpected Finds Procedure for managing asbestos in locations that may not have been identified in the REF or in other investigations.

What safety measures are in place?

We are working in line with the Environmental Protection Authority (EPA) and SafeWork NSW guidelines to ensure we appropriately manage and remove asbestos according to our environmental and health obligations.

We will use the following safety procedures to manage asbestos:

- air quality will be monitored during the removal of non-bonded asbestos
- signs, barriers and temporary fencing will surround areas containing asbestos
- a hygienist will be on site to monitor and control the asbestos removal
- water sprays will be used to suppress dust
- any material containing asbestos will be encapsulated on site or loaded, transported and disposed of at licensed facilities by specially trained and licensed personnel.

For more information, please visit safework.nsw.gov.au

Supporting our community

Currently infrastructure construction projects are considered essential to the economy and will continue as planned across the city and the state.

The M6 Stage 1 project will deliver 5,300 jobs and support the local economy. The safety and wellbeing of our workforce and the wider community is our highest priority. Our people are following hygiene and appropriate social distancing measures and will continue to do so.

Recreational Facilities timeline

Construction commenced
August 2020

Synthetic fields complete
Mid 2021

Playgrounds, skate park, and other facilities complete
Late 2021

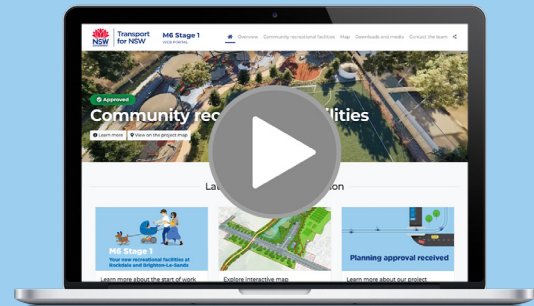

All recreational facilities complete and open to community
Late 2021

Learning more about our work

Visit our online interactive portal to check out our projects maps, images and view our latest planning documents.

As construction progresses, you will also be able to see the transformation of the sites by watching our time lapse camera.

Please visit nswroads.work/M6portal to learn more.

Contact our team

Our team will continue to keep you updated during construction of the recreational facilities and the M6 Stage 1.

If you would like to learn more about our project please contact us.
