FAUNA CROSSINGS

JULY 2014

Fauna crossings will be provided to address the safety of road users and fauna alike. Crossings will consist of culvert style underpasses and rope bridges to provide for the key local fauna identified as part of the Environmental Assessment process.

This will include:

- Inclusion of dedicated fauna underpasses with fauna fencing and fauna furniture and dual use fauna movement and drainage underpasses as well as rope bridges that are expected to be used by a variety of arboreal mammals.
- Bridges across creek lines will provide further opportunities for fauna to cross.
