# Princes Highway upgrade

Jervis Bay Road and Princes Highway intersection upgrade | April 2022

The Jervis Bay Road and Princes Highway intersection upgrade project has been approved for construction. Early work is on track to start in late 2022.

This follows the completion of the environmental assessment and analysis of feedback on the Review of Environmental Factors report and concept design.

## Find out more

The detailed design contract has been awarded to Arcadis Australia Pacific Pty Ltd and detailed design work has started. This will include finalising the design of the project before construction starts.

## Thank you for your feedback

Transport for NSW received 146 submissions on the concept design and environmental assessment in mid-2021. Feedback raised a number of considerations around traffic and safety impacts as well as other matters related to property, biodiversity and Aboriginal heritage.

103 comments were also received on a proposed multi-modal transport facility. Feedback included suggestions that would encourage transport customers to use the facility.

Visit [nswroads.work/jervisbayroad](https://nswroads.work/jervisbayroad) to view the Submissions Report.

**Better, safer and more reliable**  
trips for locals, freight and visitors

## Key improvements

The concept design includes a grade separated interchange, or flyover, with roundabouts on either side on Jervis Bay Road.

Following a review of feedback and more design work, important improvements have been made to the project. These include:

- Better connection with the planned Princes Highway further south, including a new local road to the south-east of the intersection. This would connect to the highway when the upgrade south of the intersection is complete.
- Details of the new multi-modal transport facility, including bus bays, a kiss and ride facility, car parking and shared path connections, bus shelters, bicycle racks and lighting. This would be subject to need and funding.
- Safer access to local roads including Old Princes Highway and Willowgreen Road
- Improvements to improve wildlife connectivity and reduced visual impacts
- More information on how we'll effectively manage traffic during construction.
