

Richmond Bridge duplication and traffic improvements - investigations underway

The Richmond Bridge duplication has been identified as a solution to help reduce congestion in the Richmond area.

Roads and Maritime Services are assessing traffic volumes, travel times and queue lengths at various locations within and around Richmond and North Richmond as part of investigations for duplicating the Richmond Bridge over the Hawkesbury River. The study area is outlined in green below.

Traffic counters including cameras were installed from **Monday 10 December 2018** for one week to collect traffic data.

How will the work affect you?

Cameras were installed at various locations within the study area in Richmond and North Richmond without any disruptions to residents or motorists.

The information collected will help inform planning for the bridge.

Next steps

In addition to completing the traffic study, Roads and Maritime will carry out preliminary environmental investigations.

Community and stakeholder input is a key component of the project. We will talk to the community and stakeholders in coming months and encourage feedback as part of early planning for the bridge duplication.

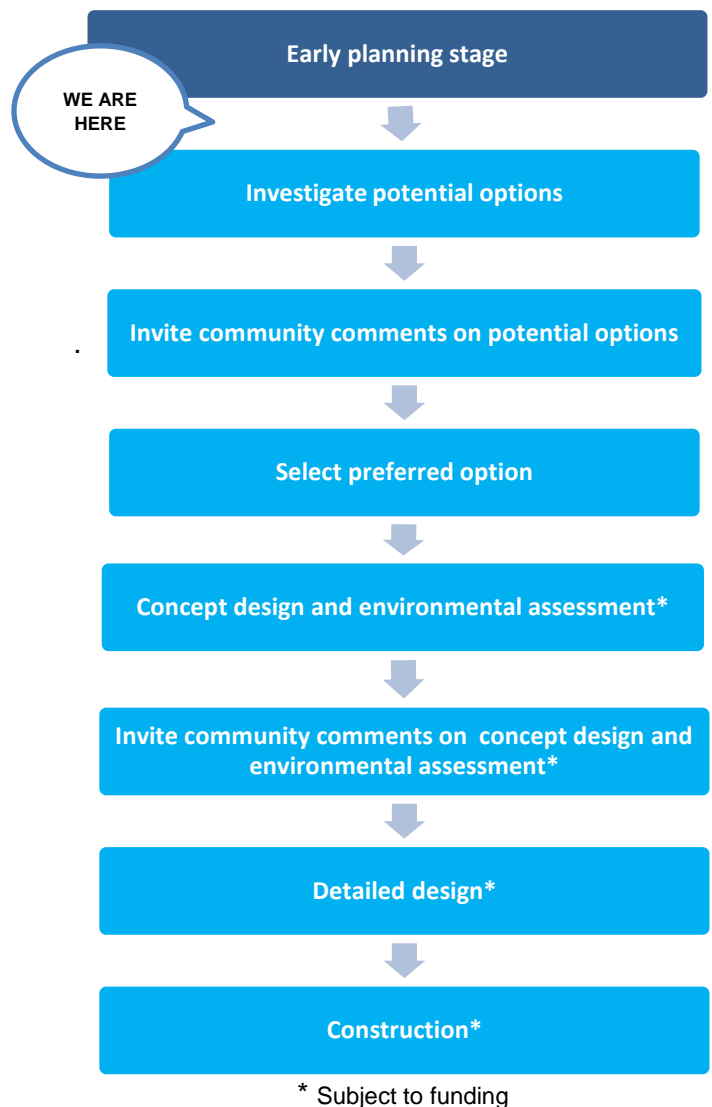

A community update will be delivered to residents and businesses in the Richmond and North Richmond area in early 2019.
