

13 Construction and maintenance considerations

The identification of constructability issues has been undertaken following the guidance of the RMS Constructability Assessment Issue Register. The issues identified through this process will be considered as part of the option development process.

Maintenance considerations have been included in the development of the options. The road design has taken future maintenance into consideration, with reference to drainage issues and the provision of adequate space to undertake this type of work once the project has been built.

The new bridges will require additional time for inspections and servicing due to the fact that there are more elements to inspect and maintain. Mobilisation and demobilisation costs will remain the same for all the options presented.
