---

It's hard to describe that am I living in a developed or a a third world country at least corruption is very much open in a 3rd world country but slowly realizing it that it exists here as well when lot of countries could have banned rideshare without a second thought it's a shame here as to my understanding the law was very clear to passenger act well nothing will happen as this are just words and for some it doesn't have any meaning so in your language if u claim that 70% is rank nd hail nd the remaining 30% is app based then fair go policy if u remember what was the base for this country then rideshare drivers should pay 30% of the costs which taxis pay nd if u can't even do that then as an australian you believe in human rights than what is going on with uber drivers us HUMAN EXPLOITATION if u understand nd if not then hey why do you guys care really show your double faced emotions just let them do nd operate in whatever way they want to but let me tell u those drivers who are driving for uber are in much more danger on road as they have to drive 16 to 18 hours thanks to no limit on cars on the road , if I would be a rider nd if would have used rideshare nd if in any case something would have happened because of any accident or something then I would have actually suied the govt for not looking after my safety nd allowing an illegal service to operate leaving my safety in jeopardy , how many more cases of criminal nature would you need before you could actually take action against a company to allow its drivers to drive without any proper background checks nd leave all the things just tell me why a normal person who have brains nd commonsense would ever pay upto 40% extra on a more bad service like taxis would u ever pay which not lot of people would nd never understand thatvit is because of high operating costs ? So my sincere request is to leave us on our fate rather than playing your politics nd wasting tax payers money on all this B S because it has been already been decided by ur govt so why all this propaganda for , if really would have been in the interest of the the consumers which it is all about nd if u really claim then simply you could have reduced the cost of operating a taxi nd kind of deregulated the industry which could have been more safer but why would it be bothered at least their are lots of true australian who support the taxi industry then duel headed serpents , so please my true advice is stop all this nonsense and let uber operate it in anyway shape or form which it wants to operate .
