In response to a letter by Mark Coure references - 00288033 and 00248768

1. What research has been done on the impact of the Uber and other ride sharing apps on the taxi and hire car business?

According to Mark Coure - The implementation of Uber has had no detrimental effects on the existing taxi and hire car businesses. This is a total nonsense. I have personally suffered a 30% loss of business due to this unwanted and annoying competition. The statistics that the government produces are just fabricated nonsense to justify and hide draconian policies.

Uber drivers take all the big fares and leave the small annoying fares for taxi drivers to do. The government is turning Australia into a 3rd world country with 3rd world standards of transport.

The authorization process for Uber drivers is a joke. Its just an online form filing exercise with no guarantees of validity. It is just an accident waiting to happen.

Uber is scab labour, un-Australian and anti-union based imported garbage
