

Transport is committed to implementing best practice data and information management enabled in a digital environment.

Transport procures and owns service and asset data and information in relation to its current and future Transport Network, increasingly in digital form and using various technologies.

Data and information is collected, created, maintained and applied on behalf of and in compliance with Transport requirements by contracted service providers, cluster agencies and Transport for NSW.

Transport will ensure this data and information is managed as an asset. This will enable informed customer focused decision making in relation to planning, delivery and management of a safe, sustainable and integrated transport system, by having the right data and information, at the right time.

The Data and Information Asset Management Policy is supported by the following principles:

- Single Source – Ensuring service and asset data is accurate, current, reliable and not duplicated
- Collaboration – Increasing access and sharing, reducing latency for improved decision making
- Automation – Reducing or eliminating manual work associated with creating or sharing data
- Interoperability – Reducing or eliminating double handling or translation of data between systems
- Mobility – Enabling access to and input of data from multiple locations including the field
- Visualisation – Incorporating methods to develop, coordinate and check service and asset data spatially
- Data Governance – Comply with information management policies, including open data, data information custodianship & information security

We promote a transparent and collaborative culture seeking to improve performance by:

- Continuously improving access to Transport for NSW service and asset data and information
- Continuously improving collaboration and sharing of service and asset data and information managed by multiple information stewards and custodians, across both project and asset life cycles
- Continuously improving service and whole of life asset investment decisions
- Continuously capturing lessons learnt and best practice from projects and transition to/from service providers

Rodd Staples
Secretary
1 July 2018

This Policy applies to:

- Transport for NSW
- Department of Transport
- Roads and Maritime Services
- Sydney Trains
- NSW Trains
- RailCorp
- State Transit Authority
- Sydney Ferries
- Service Providers to TfNSW
