

Automatic Train Protection

Warrimoo

COMMUNITY NOTIFICATION

November 2020

Transport for NSW is boosting safety across the electrified rail network by delivering new Automatic Train Protection (ATP) technology.

Project overview

ATP will make the train network safer and more reliable by ensuring trains operate within the permitted speed limit.

The technology will provide real-time speed and signal information to train drivers. The system includes:

- installation of electronic equipment on rail lines to continually monitor train speed
- installation of electronic equipment on suburban and Intercity trains which provides information on the train's speed, distance and direction.

ATP is being rolled out across the Sydney Trains and NSW TrainLink electrified network.

Upcoming activities at Warrimoo

During **November**, we will continue excavation work inside the rail corridor adjacent to Warrimoo Train Station.

While this work will occur during the day (Monday to Friday), the equipment required to undertake the work will be delivered and removed from the site at night time, outside regular work hours. This is to ensure safe access for workers, residents and road users.

Equipment delivery and removal will occur via the access gate on the Great Western Highway opposite Warrimoo General Store and Post Office **between 9pm and midnight, on two week nights**. We do not anticipate the full three hours to be required on each occasion.

What you may notice

All work activities will occur within the rail corridor, with equipment to be used including an excavator, work vehicles, and various hand and power tools.

Traffic control will be in place at the access gate for the duration of the equipment delivery and removal. During equipment removal and delivery one of the eastbound lanes of the Great Western Highway will be closed to ensure safe access to the gate. Traffic control will be in place to provide direction to motorists and pedestrians.

Transport for NSW is committed to minimising noise impacts on the community. We switch off equipment when it is not being used, place equipment as far away from properties as possible and monitor our work activities to make sure noise levels are being managed effectively.
