

Automatic Train Protection

Mortdale

COMMUNITY NOTIFICATION

November 2020

Transport for NSW is boosting safety across the electrified rail network by delivering new Automatic Train Protection (ATP) technology.

Project overview

ATP will provide additional safety benefits and more reliable services by ensuring trains operate within the permitted speed limit.

The technology will provide real-time speed and signal information to train drivers. The system includes:

- installation of electronic equipment on rail lines to continually monitor train speed
- installation of electronic equipment on suburban and intercity trains which provides information on the train's speed, distance and direction.

ATP is being rolled out across the Sydney Trains and NSW TrainLink electrified network.

Upcoming activities at Mortdale

Between 10pm and 6am, Monday 9 November to Friday 13 November, for a maximum of two nights, we will be completing routine maintenance on electronic safety equipment previously installed in the rail corridor.

Work will only be done one night during this time to ensure the safety of the team and that work does not interrupt other required operations.

Access to the rail corridor will be via gates in the Mortdale Station carpark off Coleborne Avenue. Please see map of the work area overleaf. There will be no traffic impacts as a result of this work.

What you may notice

Equipment used during the work activity will include drills and other hand tools. Higher noise generating work involving power tools is only expected to occur for short periods.

Transport for NSW is committed to minimising noise impacts on the community. We switch off equipment when it is not being used, place equipment as far away from properties as possible and monitor our work activities to make sure noise levels are being managed effectively.
