

Automatic Train Protection

Epping

COMMUNITY NOTIFICATION

March 2021

Transport for NSW is boosting safety across the electrified rail network by delivering new Automatic Train Protection (ATP) technology.

Project overview

ATP will provide additional safety benefits and more reliable services by ensuring trains operate within the permitted speed limit.

The technology will provide real-time speed and signal information to train drivers. The system includes:

- installation of electronic equipment on rail lines to continually monitor train speed
- installation of electronic equipment on suburban and intercity trains which provides information on the train's speed, distance and direction.

ATP is being rolled out across the Sydney Trains and NSW TrainLink electrified network.

Upcoming activities at Epping

Between 6am and 6pm Saturday 13 and Sunday 14 March 2021 we will be installing electronic safety equipment in the rail corridor. This work is taking place during a scheduled trackwork weekend to ensure the safety of workers and that work does not interrupt other rail operations.

Access to the rail corridor will be via gates in the commuter car park off Cambridge Street. Please see map of the work area and access gate overleaf. There will be no traffic impacts as a result of this work.

What you may notice

Equipment used during the work activity will include hand tools, including an electric saw and drill. Higher noise generating work involving hand held power tools is only expected to occur for short periods.

Transport for NSW is committed to minimising noise impacts on the community. We switch off equipment when it is not being used, place equipment as far away from properties as possible and monitor our work activities to make sure noise levels are being managed effectively.

Keeping the community informed

If you would like to speak with the project team about this work, please contact us through the details provided below. Thank you for your patience and understanding during these important safety improvements to the rail network.
