

Farm Gate Access Risk Assessment Procedure June 2019

Access for vehicles up to B-doubles; operating at 4.6m high, Higher Mass Limits (HML) or Productivity Schemes travelling to the Farm Gate

The Farm Gate Access Risk Assessment contains a series of questions designed to assess the magnitude of risk on low volume council roads being considered for occasional access of certain combinations under this project. The risk assessment will be used to justify to the local council road manager why access should be granted. The approved risk assessment checklist has been attached and should be implemented with the support of this Procedure and the Farm Gate Access Practitioners Guide.

This procedure will offer targeted guidance to the proponent seeking access, the assessor and local council road managers.

Purpose

The purpose of this procedure is to:

- · Define what type of road, activity and vehicle type can be considered under this procedure
- Guide the assessor through each step and highlight considerations when completing the Farm Gate
 Access Risk Assessment
- Clarify roles and responsibilities for each step involved in the Farm Gate Access Risk Assessment and approval process
- Provide a clear and consistent process of reviewing and assessing particular types of access

Risks

Risks to be managed by this procedure include:

- Inconsistent and unclear information or direction provided to the assessor, resulting in poor quality or incorrect Risk Assessments
- Ensure a reasonable and accepted practice is followed by the assessor, for example how sight distance is measured and recorded or explanations on what short stacking means
- Assessments carried out for routes that do not meet the definitions prescribed in this procedure
- Currency of information in permit renewal requests whereby approved routes continue to meet the definitions outlined in this document

Scope

Farm Gate Access refers to this procedure, checklist and subsequent practitioners guide for activities associated with the following description for road, activity and vehicle types:

 Road function – Our focus is on local access roads under the care and control of Councils or otherwise in unincorporated areas. The major function for this type of road is to provide access to farms or properties and has limited connectivity to the broader road network. This project adopts the definition outlined in the Local Government Functional Road Classification Hierarchy table developed by the Institute of Public Works Engineering Australia NSW (IPWEA)¹.

- Low volume road In this project low volume is defined as roads that have limited connectivity to the broader road network and carry no more than 200 vehicles per day, where 25 or less of these vehicle movements consist of heavy vehicles operating within general access provisions.
- Occasional task this project does not seek to address access to facilities which have high volumes of movements relating to operations such as grain terminals or feedlots. This project considers an occasional task to be up to 26 return trips per annum per property. This means that access to and from the property by one vehicle equates to one trip.
- **Development type and activity** this project will specifically target local roads that provide access to properties used for primary production. Councils will not be limited in their implementation of the model; however, it will be developed giving consideration to the freight task relating to primary produce.
- Primary Producer A primary producer by definition of the Motor Vehicle Taxation Act means a person:

(a) who cultivates or uses the person's own land or that of another for the person's own benefit:

(i) for the production of fruit, grain, flowers, vegetables, tobacco or farm or agricultural produce of any description, or

(ii) for dairy farming, poultry or other bird farming, pig farming, bee keeping or oyster or fish culture, or

(iii) for a nursery, or

(iv) as a pastoralist for the rearing or grazing of horses, cattle or sheep, or

(b) who gathers leaves from which eucalyptus or other oil is to be distilled.

This procedure is applicable to the proponent who has an interest and/ or need to gain access, and activates the Risk Assessment model to be carried out in accordance with this framework.

Vehicle types considered under this framework include restricted access vehicles up to and including 26m B-doubles, vehicle combinations that are up to 4.6 metres in height, vehicle or vehicle combinations that are operated at Higher Mass Limits (HML), or being used under Productivity Schemes such as the Grain Harvest Management Scheme (GHMS) or the Livestock Loading Scheme (LLS) in accordance with the definitions outlined in the HVNL.

Road trains are considered out of scope for the purposes of this project.

This process does not remove the responsibilities of approval by the Road Manager which are prescribed under Heavy Vehicle National Law (HVNL).

Overview

Farm Gate Access aims to facilitate a greater volume of heavy vehicle access approvals for movements on low volume roads, performing an occasional task - specifically accessing the farm gate. This project complements other work being carried out to develop regional freight networks.

This approach has been developed in partnership with NSW local council road managers and enables third parties to complete a risk assessment of certain routes before it is submitted to the Road Manager who will grant approval.

The Practitioners Guide is to work in synergy with the Farm Gate Access Risk Assessment Procedure and Checklist, providing assurance that a sound and methodical process was followed during the assessment.

In failing to use the three documents in conjunction with one another will not meet the requirements to approve access.

Legal position

The Road Manager cannot delegate or forfeit their responsibility as Road Manager. The Road Manager will still need to approve an application to grant access and, as such, must be comfortable with the integrity of

¹ <u>https://higherlogicdownload.s3.amazonaws.com/IPWEA/c7e19de0-08d5-47b7-ac3f-</u>

c198b11cd969/UploadedImages/IPWEA%20Road%20Hierarchy%20posterA3.pdf

the process behind the route assessment.

The Heavy Vehicle National Law does not prescribe what needs to be considered in a route assessment but the general law requires that any approver must act reasonably. There is no specific requirement as to who should carry out the assessment but, in order to be considered reasonable, the assessor should have sufficient local knowledge and experience to provide credible and strong assurance.

In terms of the 'route assessment' - HVNL (s.156 (2) (b)) defines this as:

"...an assessment of the road infrastructure in the areas or on the routes to which the authority is to apply to decide the impact the grant of the authority will have, or is likely to have, on the road infrastructure."

It is expected that the road can be used safely given the proposed dimension and/ or mass of the vehicle and factors such as the nature of the terrain or road surface; the nature of the road and likely traffic or hazards; and obstacles such as overhead bridges, wires, or poles are considered.

Any technical assessment, such as assessing the load capacity of a bridge, is out of scope.

Practitioners Guide: Data collection methods and best practice

The Risk Assessment model has been designed to reach members of the community who desire access as an operator or land holder. Generally route assessments are carried out by technical officers who complete formal or on-the-job training and bring with them a technical skill set or background. The Practitioners Guide has been developed to demonstrate accepted methods for collecting technical data that can be used to support access on the roads for vehicle types and activities described in this procedure. This includes best 'accepted' practice while collecting and recording accurate information on:

- Roadside development
- Clear zone requirements
- Road and traffic characteristics related to the road cross section
- Truck sight distance
- Horizontal and vertical alignment (curves or bends and crests or dips)
- Swept Path analysis
- Short Stacking

Prompts on how to collect this information is contained in the Risk Assessment checklist however are explained in more detail throughout the Practitioners Guide.

Quality Assurance

Council should carry out regular audits on the quality of information provided by the Assessor. Selection of the route would be at random and council should consider carrying out a minimum number of audits per annum.

Maintenance cycle

Consideration needs to be given to the lifecycle of the process with regular reviews carried out to ensure any data referenced or best practice methods recommended remain current.

• For information regarding the application process, <u>https://help.nhvr.gov.au/cmp4/help-centre-customer</u>.

Farm Gate Access Risk Assessment Checklist

Road name(s)		Council		
Total length (km)		Date last assessed		
Assessor	Contact details		Date	
Notes				

Does the route meet the criteria outlined in the Farm Gate Access Procedure?			
If you answer 'no' to any of these questions, please refer to the process outlined in the Farm Gate Access Procedure or contact your local council for advice before			
proceeding			
(a) The type of road(s) provide access to farms or properties used for primary production activities			
(b) The road(s) have limited connectivity to the broader road network			
(c) The road(s) carry no more than 200 vehicles per day, where 25 or less of these vehicle movements are heavy vehicles.			
(d) The heavy vehicle access will provide no more than 26 movements per year per property (Note, one movement is defined as one return trip to or from the property)			

Criteria	Selection	~	Risk L M H	Action to reduce the risk severity for moderate and high risk items	~
1.0 Suitability					
1.1 What type of access is required? (select one or multiple)	4.6m				
	B-Double				
	HML				
	LLS				
	GHMS				
 1.2 Are you aware of similar vehicles travelling along the route? (e.g. under permit or already have access approved as a result of this checklist) (Refer 1 below) 1.3 Are there any signposted restrictions for heavy vehicles including mass, length or time of day travel on any roads or bridges on the route? 	Yes				
	No				
	Yes		High	Local council road manager to investigate and advise pr access granted - network restrictions already in place	ior to
	No		Low		

Criteria	Selection	✓	Risk L M H	Action to reduce the risk severity for moderate and high risk items	✓
2.0 Road environment					
2.1 What is the posted speed limit?	40km/h				
	50km/h		Low		
	60km/h				
	70km/h		Mederate	Travel at or below a 60km/h speed limit	
	80km/h		Moderate	No travel at school bus times, peak periods, inclement weather, low visibility, etc	
	90km/h			Travel at or below a 60km/h speed limit	
	ookiii/ii		-		
	100km/h			No travel at school bus times, peak periods, inclement	
	Greater than 100km/h		High	weather, low visibility, etc	
	No Visible Speed Limit				
2.2 Describe the land use along the route	Rural		Low		
	Rural/ Residential		Moderate	No travel at school bus times, peak periods, inclement weather, low visibility, etc	
	Residential		High	No travel at school bus times, peak periods, inclement	
	Commercial		High	weather, low visibility, etc	
	Industrial		High	No travel at school bus times, peak periods, inclement	
	Mixed		High	weather, low visibility, etc	
2.3 Are there any objects that can be damaged or cause	No		Low		
damage in accordance with "clear zone" requirements? (e.g. fence posts or mature vegetation) (Refer 2 below)	Yes		High	Travel at or below a 60km/h speed limit	
2.4 Could the vehicle hit any roadside structures while	Νο		Low		
travelling along the route? (e.g. pedestrian islands/refuges, signs, fencing or drains)	Yes		High	Travel at or below a 60km/h speed limit	
3.0 Road and traffic characteristics					
3.1 Describe the road surface	Sealed		Low		
	Sealed and		Modorato	Travel at or below a 60km/h speed limit	
	Unsealed		wouerate	Limit travel during or following adverse weather events	
	l la cocle d		High	Travel at or below a 60km/h speed limit	
	Unsealed			Limit travel during or following adverse weather events	
3.2 Is the road width suitable for your vehicle? (Refer 3 below)					

	Criteria	Selection	~	Risk L M H	Action to reduce the risk severity for moderate and high risk items	~
	Approximately how many vehicles travel on this road per day?	How wide is the road, including the shoulder?				
		Less than 6.8m		Low		
	i Less than 150 vehicles per day				Travel at or below a 60km/h speed limit	
Socied		Greater Than 6.8m		High	No travel at school bus times, peak periods, inclement weather, low visibility, etc.	
Sealed		Less Than 7.6m		Low		
	ii. Greater than 150 vehicles per day				Travel at or below a 60km/h speed limit	
		Greater than 7.6m		High	No travel at school bus times, peak periods, inclement weather, low visibility, etc.	
	i. Less than 150 vehicles per day	Less than 7.2m		Low		
					Travel at or below a 60km/h speed limit	
Uncooled	Greater than 7.2m		High	No travel at school bus times, peak periods, inclement weather, low visibility, etc.		
Unsealed	ii. Greater than 150 vehicles per day			Low		
					Travel at or below a 60km/h speed limit	
		Greater than 7.7m		High	No travel at school bus times, peak periods, inclement weather, low visibility, etc.	
3.3 Is the route f	at, rolling or mountainous? (Refer 4 below)	Flat		Low		
					Pilot Vehicle to be used	
		Rolling		Moderate	Rotating Beacons required	
					Headlights on	
					Pilot Vehicle to be used	
		Mountainous		High	Rotating Beacons required	
					Headlights on	
3.4 Does the roa	d contain any tight intersections or narrow	No		Low		
the road to pass	? (Refer 5 below)				Pilot Vehicle will be used	
	```''	Yes		High	Rotating Beacons required	
				]	Headlights on	
		Unsure		Moderate	Pilot Vehicle to be used	

Criteria	Se	election	~	Risk L M H	Action to reduce the risk severity for moderate and high risk items	~
					Rotating Beacons required	
					Headlights on	
3.5 Stopping Sight Distance:	Spd	Distance				
At your nominated speed, how far down the road can you see?	40	Greater than 50m		Low		
	km/h	Less than 50m		High		
	50	Greater than 70m		Low		
	km/h	Less than 70m		High		
	60	Greater than 95m		Low		
	km/h	Less than 95m		High		
		Greater than 120m		Low		
	km/h	Less than 120m		High	Travel at or below a 60km/h speed limit	
	80 km/h	Greater than 150m		Low		
		Less than 150m		High	Travel at or below a 60km/h speed limit	
	90	Greater than 185m		Low		
	km/h	Less than 185m		High	Travel at or below a 60km/h speed limit	
	100	Greater than 215m		Low		
	km/h	Less than 215m		High	Travel at or below a 60km/h speed limit	
<b>3.6</b> Do cyclists or pedestrians use the route?	No			Low		
	Yes			Moderate	Mandatory condition - No travel at school bus times, pea periods, inclement weather, low visibility, etc.	k
3.7 Is this a school bus route?	No			Low		
	Yes			Moderate	Mandatory condition - No travel at school bus times, pea periods, inclement weather, low visibility, etc.	k

Criteria	Selection		~	Risk L M H	Action to reduce the risk severity for moderate and high risk items	✓
4.0 Intersections or railway level crossings						
<b>4.1</b> Does the route connect to a main road?	Νο			Low		
	Yes			High	Route connects to main road - consent required from roa manager	ıd
4.2 Safe Intersection Sight Distance:		Distance				
intersection, how far down the road can you see a car approaching so you can proceed safely and without forcing the	40	Greater than 85m		Low		
approaching vehicle to stop, assuming the vehicle is travelling at the posted speed limit? (Refer 6 below)	km/h	Less than 85m		High		
	50	Greater than 115m		Low		
	km/h	Less than 115m		High		
	60 km/h	Greater than 150m		Low		
		Less than 150m		High		
	70 km/h	Greater than 190m		Low		
		Less than 190m		High	Travel at or below a 60km/h speed limit	
	80 km/h	Greater than 230m		Low		
		Less than 230m		High	Travel at or below a 60km/h speed limit	
	90	Greater than 275m		Low		
	km/h	Less than 275m		High	Travel at or below a 60km/h speed limit	
	100	Greater than 320m		Low		
	km/h	Less than 320m		High	Travel at or below a 60km/h speed limit	
<b>4.3</b> Is there a railway level crossing on the route? (Refer 7	No					
below)	Yes-li	ghts		Low		
	Yes-s	igns		Low		
	Yes-c	oncern		High		

Criteria	Selection	~	Risk L M H	Action to reduce the risk severity for moderate and high risk items
4.4 Is there a <i>minimum length of 29.5m</i> to prevent the	Yes		Low	
blocking of an adjacent intersection or railway level crossing? (Refer 8 below)	No		High	Local council road manager to investigate and advise prior to access granted - Short Stacking
5.0 Structures				
5.1 Are there any culverts or causeways on the route?	No			
	Yes		High	Local council road manager to investigate and advise prior to access granted - culvert or causeway on route
5.2 Are there any bridges on the route?	No			
	Yes		High	Local council road manager to investigate and advise prior to access granted - bridge on route
<b>5.3</b> If yes, are any of these timber structures?	No			
	Yes		High	Local council road manager to investigate and advise prior to access granted - timber bridge on route
6.0 Height				
6.1 Is there an object less than 4.6m in height over the road	No			
that can be struck on the route? (eg. Vegetation, signage, utilities)?	Yes		High	Local council road manager to investigate and advise prior to access granted - possible height restrictions
7.0 Adjacent communities and amenity				
7.1 Are there any schools, churches or hospitals on the route?	No			
	Yes		Moderate	No travel in peak periods, school bus times, inclement weather, low visibility, etc.
Other Applicable Measures (Optional)				

Insert supplementary information related to the route such as safety suggestions as headlights on while on route, Farm Gate to be open for Entry/Exit, Radio or phone communication with driver, contact made with surrounding neighbours of vehicles movements.

Summary of access conditions

List e.g., vehicles must travel at "x" km/h, escort required for travel, farm gate must be open for vehicles arrival, Driver training, headlights on

- All information contained in this checklist are a true and accurate recording of the route conditions on the date this assessment was carried out
- □ The data collection methods described in the Practitioners Guide have been followed

□ I understand that completing this assessment does not authorise access to the route. The completed assessment should be attached to a Permit Application and submitted to the NHVR.

#### Farm Gate Access Risk Assessment: Quick Reference Guide.

1. A similar vehicle to the one you are assessing that already uses or had used this route under permit.

2. A **clear zone** is a 'buffer' measured from the edge of the travelled way, outwards away from the road and is free from these non-frangible objects. Each clear zone (in metres) is determined based on the speed limit, volume of traffic using the road on an average day (average daily traffic or data collected over a year and divided by 365 to calculate an average) and the shape of the verge (cut or fill).

#### Suggested clear zone widths

Speed limit (km/h)	Average Daily Traffic	Clear zone width (m)		
	(ADT)	Fill	Cut	
Less than or equal to 60	Less than 750	3.0	3.0	
70-80	Less than 750	4.5	3.0	
90	Less than 750	5.5	3.5	
100	Less than 750	7.5	4.5	
110	Less than 750	8.0	5.0	

3. The **road width** should be representative of the section being assessed. Where lane width varies, use the narrowest point of the road section and make a note of this in the 'other local conditions' comment box on the checklist.

#### Minimum carriageway widths

	Roadside	Road Width			
Average Daily Traffic	Development	Sealed	Unsealed		
1-150	Rural	6.8m	7.2m		
150-500	Rural	7.6m	7.7m		

4. A '**grade**', vertical alignment or longitudinal profile along the centreline of the road refers to the steepness a crest or dip and is generally expressed as a percentage of the vertical component divided by the horizontal component.

#### General maximum grades (%)

Operating aread (km/b)	Terrain (%)					
Operating speed (kin/ii)	Flat	Rolling	Mountainous			
60	6-8	7-9	9-10			
80	4-6	5-7	7-9			
100	3-5	4-6	6-8			

5. For the purposes of this Risk Assessment, the Assessor is required to visually assess the road and indicate whether there may be concerns of **vehicles negotiating the route** and whether they are likely to track to the opposite side of the road using the width of the carriageway. Refer to 3.4 Table 4 Swept Path comparisons and graphical representations of vehicle combinations movement paths.

6. Stopping Sight Distance (SSD) is the distance to enable a normally alert driver, travelling at a speed to perceive, react and brake to a stop before reaching a hazard on the road ahead. Safe Intersection Sight Distance (SISD) is the minimum sight distance which should be provided on a major road at any intersection. SISD provides sufficient distance for a driver of a vehicle on the major road to observe a vehicle on a minor road approach moving into a collision situation and to decelerate to a stop before reaching a collision point. *Figures shown for sight distance assume the road is flat.* 

7. **Railway level crossings** have passive or active controls to guide road users. Passive sites have signs that are unchanging with no mechanical or light devices. In addition to signs, active sites are controlled by automatic warning systems such as flashing lights, automatic gates (booms, boom gates), audible devices (bells, gongs) or other devices that are activated by approaching trains.

8. In some areas the distance between intersections (including railway level crossings) are shorter than the length of some vehicles. This is referred to as '**storage**' or '**stacking distance**'. When a vehicle overhangs the adjacent intersection or railway level crossing we call this 'short stacking'. The distance between intersections or an intersection and railway level crossing must be at least 3.5 metres plus the vehicle length.

# Roles and Responsibilities

Role		Responsibilities
Roads and Maritime Services	RMS	Roads and Maritime Services is a NSW Government agency delivering safe and efficient journeys throughout NSW, managing the operations and programs of roads and waterways.
National Heavy Vehicle Regulator	NHVR	The National Heavy Vehicle Regulator (NHVR) is Australia's independent regulator for all vehicles over 4.5 tonnes gross vehicle mass.
Transport for NSW	TfNSW	Transport for NSW role is to lead the development of a safe, efficient, integrated transport system.
Local Council, Various		Seek legal advice on how this project may affect them (optional)
Road Manager		Road Managers have particular responsibilities regarding decision-making for heavy vehicle access to their road network and consenting to access to restricted access vehicles on their roads, and the conditions under which they will operate.
Proponent		The person, company, incorporated body or entity that requires HPV access along a route to a site
Assessor		The assessor is considered to be any party who participates, carries out, and/ or completes the assessment of a low volume road which is sent to the Road Manager as a request for access. The assessor may include, but is not limited to, the land holder, farmer, operator, producer, contractor, external consultant or council staff member.
Rail infrastructure managers		Manage the NSW rail network in accordance with the Rail Safety National Law <u>https://www.transport.nsw.gov.au/industry/asset-standards-authority/find-an-aeo</u>

# Acronyms, Abbreviations and Definitions

Term		Definition
Heavy Vehicle National Law	HVNL	The legislative framework that establishes prescribes and imposes all requirements relating to heavy vehicles.
High Productivity Vehicle	HPV	Higher Productivity Vehicles or HPVs are truck-and-trailer combinations that provide the ability to shift more freight more efficiently, with the spin-off of greater environmental and safety performance.
Swept path		The calculation and analysis of the movement and path of different parts of a vehicle when that vehicle is undertaking a turning manoeuvre.
Short stacking		Some railway crossings are prone to vehicles stopping on the railway tracks due to factors involving short storage or stacking distances between the crossing and a nearby intersection, and/or traffic congestion which results in vehicle queues extending back over the crossing. Also, the crossing itself may contribute to queues extending back into nearby intersections.
Permit		A vehicle that exceeds the General Mass and Dimension Limits, 19 metres in length, 4.3m in height and 2.5 metres in width, must carry a permit that is issued to the vehicle/combination or a notice. A Notice is freely available from the National Heavy Vehicle Regulator and must be

		complied with the vehicle must fit inside the envelope requirements of the Notice. Once your vehicle or combination does not fit into this envelop a Permit must be applied for from the NHVR. RMS and Local Councils also have the delegation to issue permits for intrastate travel for some vehicle types.	
Checklist or Risk Assessment Model	Attachment 1	A series of questions designed to assess the magnitude of risk on a low volume road being considered for occasional 4.6m high or HML heavy vehicle access under this project.	
RFIC	Road Freight Industry Council	The purpose of the Road Freight Industry Council is to provide expert advice to the Minister for Roads and Ports, Transport for NSW (TfNSW) and Roads and Maritime Services (RMS). The work of the Council focuses on road freight transport issues that affect road safety, efficiency and productivity in relation to operational and customer service matters.	
NCSC	Network Connectivity Sub- Committee	The purpose of the Network Connectivity Sub-Committee is to provide expert advice on network connectivity and access issues and identify strategies to address connectivity constraints and is established under the auspice of the Road Freight Industry Council (RFIC)	
HML	Higher Mass Limit	Allow particular heavy vehicles to access additional mass entitlements providing:	
		<ul> <li>Operators of vehicles or combinations running HML on triaxle groups are accredited under the Mass Management Module of the National Heavy Vehicle Accreditation Scheme (NHVAS), with an accreditation label fitted to the hauling unit; and</li> <li>Vehicles are fitted with certified road friendly suspension.</li> </ul>	
4.6m high	4.6m	A heavy vehicle must not be higher than— (a) for a vehicle built to carry cattle, horses, pigs or sheep—4.6m; or	
		(b) for a vehicle built with at least 2 decks for carrying vehicles—4.6m; or Note—	
		(c) for a double-decker bus—4 $4m$ ; or	
		(d) for another vehicle—4.3m	
		To operate at the 4.6m height, which exceeds the general access limits, the vehicle must utilise the National Class 2 Heavy Vehicle 4.6m High Livestock Carrier Authorisation (Notice) 2014 (no. 1)	
Road Manager	RM	² As a road manager, local government is recognised in legislation as being responsible for consenting to access to restricted access vehicles on their roads, and the conditions under which they will operate. The Heavy Vehicle National Law (HVNL) requires local government to formally consent to the operation of restricted access vehicles on their roads before a permit can be issued. This is intended to empower local government to ensure safety for all road users, protect and efficiently manage access to important council infrastructure, such as roads and bridges, and to preserve and manage public amenity.	
Restricted Access Vehicle Route Assessment Tool	RAVRAT	The RAVRAT tool guides local government practitioners through a consistent route assessment process, focused specifically upon the road infrastructure assessment criterion that is most relevant to the local roads environment. The system is able to assess routes for prescriptive, PBS and Over Size Over Mass (OSOM) freight movements.
