C. NSW mobile speed cameras	C1
D. NSW heavy vehicle average speed cameras	D1

1 Executive summary

The purpose of the Annual Review of NSW Speed Camera Programs is to monitor speed cameras in NSW to ensure they are having a positive road safety effect. This report was prepared in 2021, using data up until the end of the 2019 calendar year.

The NSW Centre for Road Safety (CRS) has reviewed all NSW speed cameras against the criteria in the *NSW Speed Camera Strategy 2012* (the Strategy), culminating in this report. This document is the ninth in a series of annual reports that addresses the recommendation from the 2011 NSW Auditor-General's audit of speed cameras, to provide the community with information about the road safety impact of speed cameras.

This report has identified that speed cameras continue to provide road safety benefits. Overall, trauma reductions at fixed, red-light and average speed camera locations have exceeded the trauma reductions observed across NSW since those cameras were installed. In addition, the mobile speed camera program continues to deliver road safety benefits, compared to the period before the program was reintroduced onto NSW roads.

If an individual camera is found not to have a positive road safety effect, CRS will consider alternative road safety measures at the location. The findings from this annual review also guide future speed enforcement priorities.

1.1 How NSW reviews speed cameras

The review criteria for speed camera programs and individual camera locations are provided within the Strategy. Broadly speaking, review recommendations are measured by two key criteria:

- Reduction in casualty crashes and casualties, and
- Reduction in infringement rates.

At least five years of crash and casualty data are required to make an assessment of a camera's safety benefit. The criteria and methodology are outlined within sections 4 and 7 of this review.

1.1.1 Fixed and red-light speed cameras

Most fixed speed cameras, and approximately two-thirds of red-light speed cameras, have now been installed for at least 5 years. As a result, there is sufficient data available to reliably assess road safety benefits, and this review has developed recommendations to retain, monitor or review these cameras. Where there is not yet 5 years of post-installation data available, recommendations have not been made.

1.1.2 Mobile speed cameras

Because mobile speed cameras are designed to generally deter speeding across the road network, and because they move regularly, the annual review examines crash and speed data for the entire state, rather than individual mobile speed camera locations.

1.1.3 Average speed cameras

There are now 24 average speed enforcement lengths where 5 years of data are available, and the program continues to deliver a road safety benefit.

NSW is currently expanding the heavy vehicle average speed camera program to metropolitan areas.

1.2 Key findings

1.2.1 Fixed speed camera program

Program size as at 31 December 2019: 140 cameras at 110 locations¹

Median camera installation date: 1 May 2003

Overall, there has been a reduction in road trauma at fixed speed camera locations since the cameras were installed, compared with the five year period prior to installation.

Specifically, at fixed speed camera locations there has been a:

- 40 per cent reduction in casualty crashes
- 63 per cent reduction in fatalities
- 45 per cent reduction in injuries.

The reduction in fatalities and injuries represents a saving of \$529 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period:

- 23 per cent reduction in casualty crashes
- 33 per cent reduction in fatalities
- 26 per cent reduction in injuries.

It should also be noted, alongside the crash data outlined above, that there has also been a notable increase in traffic volumes. Over the periods that fixed digital speed cameras have been reviewed within this report, there has been a 24 per cent increase in traffic volume across NSW.²

¹ Of the 110 fixed speed camera locations, seven locations operate in warning mode and six locations are high risk sites located in tunnels. Recommendations are not provided for these warning mode and high risk locations.

² Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

Individual Camera Locations

Of the 110 fixed speed camera locations, seven locations operate in warning mode and six locations are high risk sites located in tunnels. Recommendations are not provided for these 13 locations.

For the remaining 97 fixed speed camera locations:

- 78 locations were found to offer continued safety benefits,
- 4 locations were identified for ongoing monitoring in future years,
- 5 locations had insufficient data to review, and
- 10 locations were ineligible for review.

No additional fixed digital speed camera locations were identified for comprehensive review within this current iteration of the annual review of speed cameras, however community consultation has recently been completed for a number of speed camera locations identified for comprehensive review in previous annual reviews. CRS will work with an independent road safety expert to determine the way forward for those locations.

None of the 10 highest infringing fixed speed camera locations were identified in this review for ongoing monitoring.

1.2.2 Red-light speed camera program

Program size as at 31 December 2019: 210 cameras at 189 intersections

Median camera installation date: 26 February 2013

Overall, there has been a reduction in road trauma at red-light speed camera locations since the cameras were installed, compared with the five year period prior to installation.

Specifically, at red-light speed camera locations there has been a:

- 35 per cent reduction in fatal and serious injury crashes
- 77 per cent reduction in fatalities
- 36 per cent reduction in serious injuries
- 59 per cent reduction in pedestrian casualties.

The reduction in fatalities and serious injuries represents a saving of \$150 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period:

- 7 per cent increase in fatal and serious injury crashes
- 12 per cent reduction in fatalities
- 8 per cent increase in serious injuries
- 33 per cent reduction in pedestrian casualties.

It should also be noted, alongside the crash data outlined above, that there has also been a notable increase in traffic volumes. Over the period that red-light speed cameras have been reviewed within this report, there has been a 14 per cent increase in traffic volume across NSW.³

Individual Camera Locations

Of the 189 red-light speed camera locations, 44 locations have not yet been installed for 5 years. Recommendations are not provided for these 44 locations.

For the remaining 145 locations:

³ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

- 110 locations were found to offer continued safety benefits,
- 34 locations were identified for ongoing monitoring in future years, and
- 1 location was ineligible for review.

No additional red-light speed camera locations were identified for comprehensive review within this current iteration of the annual review of speed cameras.

1.2.3 Mobile speed camera program

Program size as at 31 Dec 2019: 7,000 hrs of enforcement / month at 1,024 locations

This report is based on data up until the end of the 2019 calendar year. As such, this report is not representative of changes to the Mobile Speed Camera program that were announced in November 2020.

Annual speed survey data indicate that the mobile speed camera program continues to deliver road safety benefits, compared to results prior to the reintroduction of the mobile speed camera program in 2010.

The speed survey results show that there has been a decrease in the proportion of light vehicles exceeding the speed limit over the last 10 years, for all speed zones. When comparing the 2019 results against the 2018 results there has been an increased proportion of light vehicles exceeding the speed limit, for all speed zones except for in the 70 km/h zone. The percentage of vehicles exceeding the speed limit by 10 km/h or more has decreased in all speed zones except in the 90 km/h (small sample), 100 km/h and 110 km/h.

The speed survey results also indicate an increased proportion of heavy vehicles exceeding the speed limit, for all speed zones except for in the 40 km/hr and 80 km/h zone. The percentage of heavy vehicles exceeding the speed limit by 10 km/h or more has increased in all speed zones except in the 40 km/h, 50 km/hr and 80 km/hr.

In 2019 there were a total of 29,162 infringements issued from mobile speed camera enforcement resulting in \$5.9 million of fines. The total number of mobile speed camera infringements issued in 2019 increased by 14 per cent compared to 2018.

Over 99 per cent of vehicles passing mobile speed cameras are not infringed for speeding, and this high rate of compliance has remained consistent since 2010 when the program was reintroduced in NSW.

The mobile speed camera program continues to deliver road safety benefits when compared to the most recent period without the program in operation, and there has been a 15 per cent increase in traffic volume across NSW since the mobile speed camera program was reintroduced in 2010.⁴

1.2.4 Average speed camera program

Program size as at 31 December 2019: 25 lengths

Median camera installation date: 16 December 2011

Overall, there has been a reduction in road trauma involving heavy vehicles on NSW average speed enforcement lengths since those lengths were installed, compared with the five year period prior to installation.

Across heavy vehicle average speed enforcement lengths, there has been a:

⁴ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

- 29 per cent reduction in casualty crashes involving a heavy vehicle
- 51 per cent reduction in fatalities from crashes involving heavy vehicles
- 18 per cent reduction in serious injuries from crashes involving heavy vehicles.

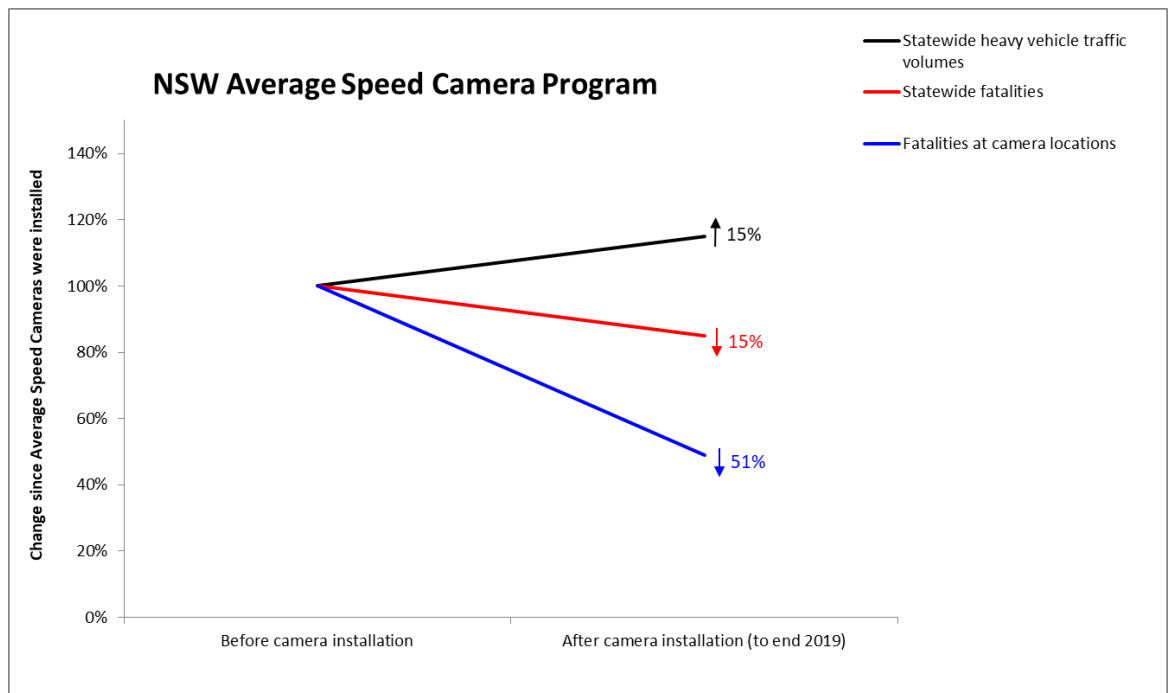

The reduction in fatalities and serious injuries represents a saving of \$174 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period for crashes involving heavy vehicles:

- 18 per cent reduction in casualty crashes involving a heavy vehicle
- 15 per cent reduction in fatalities from crashes involving heavy vehicles
- 15 per cent increase in serious injuries from crashes involving heavy vehicles.

It should also be noted, alongside the crash data outlined above, that there has been a notable increase in heavy vehicle traffic volumes. Over the periods that average speed enforcement lengths have been reviewed within this report, there has been a 15 per cent increase in heavy vehicle volumes across NSW.⁵

NSW is currently expanding the heavy vehicle average speed camera program to metropolitan areas, and CRS will continue to monitor the program.

⁵ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

2 Introduction

2.1 The NSW Speed Camera Strategy

The *NSW Speed Camera Strategy* (the Strategy) provides an integrated framework for speed enforcement in NSW, and aims to improve the transparency of NSW speed camera programs. The Strategy was developed in consultation with the NSW Police Force and NRMA Motoring and Services, and reinforces the Government's commitment to reducing fatalities and serious injuries on NSW roads.

The NSW Auditor-General has found that speed cameras change driver behaviour and improve road safety.⁶ The Auditor-General also recommended that speed camera performance information be regularly made available to the public. One of the key actions in the Strategy is therefore an annual review of speed camera programs against defined criteria.

2.2 Annual review of NSW speed camera programs

This annual review monitors automated speed enforcement in NSW. This includes fixed speed cameras, red-light speed cameras, mobile speed cameras and average speed cameras. However, this does not include the speed enforcement conducted by the NSW Police Force.

This report was prepared in early 2021, using data up until the end of the 2019 calendar year. Detailed analysis for NSW speed camera locations is provided within Appendices A – D of this report.

However, detailed analysis is not included for fixed speed cameras operating in warning mode.⁷ Crash and infringement data is instead provided for these cameras, within Appendix A. Detailed analysis is also not included for fixed speed cameras at five high risk tunnel locations. Speed cameras were generally installed at these locations when the tunnel was constructed, and therefore no pre-installation data are available for analysis.

Based on the findings of the annual review, cameras which are not delivering the expected road safety benefits will be more comprehensively investigated. These comprehensive investigations may result in the removal and relocation of the camera.

The findings from the annual review also inform future speed enforcement operations, and address NRMA Motoring & Services' request for an assessment of all high infringing speed camera locations.

2.3 The speeding problem

Speeding, which encompasses excessive speed (driving above the speed limit) or inappropriate speed (driving too fast for the prevailing conditions), is unquestionably recognised as a major contributing factor in both the number and severity of crashes in NSW.

⁶ https://www.audit.nsw.gov.au/ArticleDocuments/200/Improving_Road_Safety_Media_Release.pdf.aspx?Embed=Y

⁷ For speed cameras operating in warning mode, warning letters are issued to motorists detected speeding, unless they exceed the speed limit by more than 30 km/h, in which case a court attendance notice is issued and drivers face significant penalties. A three-strikes system also applies, where if a registered operator of a vehicle is issued two warning letters from the one warning mode camera, an infringement will be issued for a third offence and any further offences at that location.

Speeding increases the risk of having a crash, and increases the risk of death or serious injury in the event of a crash. Studies of survival and impact speed show that small increases in travel speed can result in large increases in braking distances and impact speed, resulting in both an increased risk of a crash and a more severe outcome. This is especially the case for crashes with less protected road users such as pedestrians and cyclists.

2.4 Safety benefits of camera enforcement

Speed camera enforcement is an important road safety initiative with proven road safety benefits, and is a commonly employed method of speed enforcement in many best practice road safety jurisdictions worldwide. Speed enforcement helps to reduce the incidences of speeding on our roads, which in turn reduces the risk of crashes and reduces the likelihood of death or serious injuries in the event of a crash.

Speed enforcement activities aim to reduce speeding by increasing the perceived likelihood of being caught and punished. Speed cameras generally tend to detect an initial high number of infringements followed by a rapid and sustained decrease in infringements as drivers modify their behaviour. This is also reflected by a reduction in crashes over that time.

Appendix A contains graphs of the infringement trends for individual NSW fixed speed camera locations.

2.5 Transparent management of NSW speed camera programs

2.5.1 Speed camera locations are available to drivers

The NSW Centre for Road Safety website (<http://roadsafety.transport.nsw.gov.au>) lists all speed camera locations in NSW, allowing members of the public to find the locations of all fixed, red-light and mobile speed cameras, and the positions of all average speed camera zones.

Members of the public are also able to nominate locations for speed cameras via the safer roads website (www.saferroadsnsw.com.au).

2.5.2 Speed camera revenue directly funds road safety initiatives

All fines from speed and red light cameras are paid into the Community Road Safety Fund. This funds road safety initiatives including engineering works, enhanced enforcement by the NSW Police Force, public education campaigns and community grants.

Speeding fines issued by police are not paid into the Community Road Safety Fund.

3 Types of speed camera programs in NSW

Speed cameras are automated speed enforcement tools that supplement enforcement conducted by the NSW Police Force.

The NSW Police Force routinely nominates locations to be considered for automated speed enforcement, as cameras can operate in locations that may be difficult for police to enforce. Members of the public are also able to nominate locations for speed cameras, via the NSW safer roads website at www.saferroadsnsw.com.au.

Table 1 shows the four types of speed cameras used in NSW.

Table 1: Types of speed camera enforcement in NSW

Speed cameras used in NSW			
Camera Type	Main purpose	Introduced	Program Size (as at 31 Dec 2019)
Fixed speed cameras	Location specific, to address black spot / high risk locations	1997	140 cameras at 110 locations ⁸
Red-light speed cameras	Location specific, to address high risk intersections	2009	210 cameras at 189 intersections.
Mobile speed cameras	General network deterrence	Re-introduced in 2010. <i>(This program was first introduced in 1991, but ceased operation in Dec 2008)</i>	1,024 locations, 7,000 hours of enforcement/month
Average speed cameras	Route enforcement (for heavy vehicles only)	2010	25 lengths

3.1 Fixed speed cameras

Fixed speed cameras are located at road lengths where there is a demonstrated crash history or a high crash risk. These cameras detect and deter speeding at a specific location on the road network.

3.2 Red-light speed cameras

Red-light speed cameras are installed at signalised intersections where drivers are vulnerable to right angle crashes and there is an elevated risk of a pedestrian crash. These cameras detect and deter both speeding and red-light running, both of which can result in severe injuries even in lower speed crashes.

⁸ Of the 110 fixed speed camera locations, seven locations operate in warning mode and six locations are high risk sites located in tunnels. Recommendations are not provided for these warning mode and high risk locations.

3.3 Mobile speed cameras

Mobile speed cameras are moved around the road network at various times and locations. This means drivers are less able to predict where enforcement will occur, and so are more likely to comply with the speed limit more often.

This report was prepared in 2021, using data up until the end of the 2019 calendar year. During the period of the review, mobile speed cameras operated from highly visible vehicles, with enforcement conducted by private contractors managed by Transport for NSW. The prevailing speed limit was displayed on several warning signs.

The benefit of mobile speed cameras in reducing speeding is not limited to mobile speed camera locations or the time the camera is located there; they produce a sustained change in driver behaviour by increasing the real and perceived likelihood that speeding can be enforced anywhere at any time.

3.4 Average speed cameras

The NSW average speed camera program addresses heavy vehicle speeding along travel routes with a demonstrated history of heavy vehicle crashes and/or speeding. The program targets heavy vehicles because they are over-represented in crashes on known heavy vehicle routes.

Average speed enforcement works by measuring the amount of time it takes a heavy vehicle to travel between points and then calculating the average speed of the vehicle. If the vehicle's average speed is faster than the speed limit for the length of road, the driver will be infringed for speeding.

4 Review Criteria for reviewing speed cameras

Speed cameras are used in NSW to reduce the number of people killed and injured in crashes.

The following sections outline the criteria that guide the review of speed camera performance in NSW.

4.1 Measuring the performance of speed camera programs

Table 2: Criteria for measuring the performance of speed camera programs

Program	Measure of Performance
Fixed speed camera program	Reduction in vehicles speeding at fixed speed camera locations
	Reduced frequency or severity of crashes at fixed speed camera locations
Red-light speed camera program	Reduction in frequency and severity of crashes at enforced intersections
	Reduction in frequency and severity of crashes at all signalised intersections (due to deterrent effect across the network)
Mobile speed camera program	Reduction in road trauma across the entire road network
	Reduction in speed-related crashes across the entire road network
	Reduction in speeding across the entire road network
Average speed camera program	Reduction in heavy vehicle speeding on enforcement lengths
	Reduction in the frequency and severity of heavy vehicle crashes on enforcement lengths

Results for the above are presented in Section 8.

4.2 Measuring the performance of individual speed cameras

Table 3: Criteria for measuring the performance of individual speed cameras

Camera Type	Performance data	Measure of performance
Fixed speed cameras	Speeds	Reduction in vehicles speeding within 500 metres of the camera
	Compliance data	Increase in compliance at camera location and/or reduction in infringement rates
	Crash data	Reduction in casualties and crashes within 500 metres of the camera
	Risk	Reduction in risk at the location (for example low level of speeding and/or crashes in tunnels)
Red-light speed cameras	Speeds	Reduction in vehicles exceeding speed limit at the intersection
	Compliance data	Increase in compliance at the intersection and/or reduction in infringement rates
	Crash data	Reduction in casualties and crashes at intersection
Mobile speed cameras	Annual speed surveys	Reduction in vehicles exceeding speed limit across the road network, by testing a random sample of locations
	Compliance data	Increase in compliance rates and/or reduction in infringement rates
	Crash data	Reduction in crashes and casualties across NSW
Average speed camera program	Speeds	Reduction in heavy vehicle speeding within enforcement lengths
	Compliance data	Increase in heavy vehicle compliance within the enforcement length and/or reduction in heavy vehicle infringement rates
	Crash data	Reduction in heavy vehicle crashes within enforcement lengths

Results for the above are presented in Appendices A – D.

5 Data context

5.1 Road crash data

The crash statistics recorded by Transport for NSW in the CRS crash recording database, Safe System Analytics (SSA), are confined to those crashes which conform to the national guidelines for reporting and classifying road vehicle crashes⁹, based on the following criteria:

- The crash was reported to the Police,
- The crash occurred on a road open to the public,
- The crash involved at least one moving road vehicle, and
- The crash involved at least one person being killed or injured or at least one motor vehicle being towed away.

The method of reporting tow away crash data changed in October 2014, and as such is no longer comparable to the before period. As a result, this review has focussed on casualty, fatal and serious injury crashes, compared to some of the reviews completed in previous years. This is further discussed in section 7.

In 2019, there was a change to the methodology used by NSW Health to define a serious injury. This change would result in a significant reduction in the number of serious injury crashes compared with previous years. Transport for NSW determined that the most appropriate course of action was to adopt the new serious injury definition for all crash records dating back to 2005.

This change has impacted significantly on certain findings in this report compared with previous reviews, most notably the findings related to the red-light speed camera program.

5.2 Injury severity

Crash data is presented by severity of injury, and defined as follows:

- **Fatality:** a person who dies within thirty days from injuries received in a road traffic crash.
- **Serious injury:** a person identified in SSA (casualty or driver or rider) who is matched to a hospital admission record on the same day or on the day after a crash and did not die within 30 days of the crash, and is admitted with at least one injury diagnosis; or linked to an iCare (Lifetime Care) participant record.
- **Moderate injury:** a person identified in SSA (casualty or driver or rider) who is matched to an emergency department attendance record on the same day or on the day after a crash but was not killed or not subsequently admitted to hospital; or a previously defined Minor/Other or No Injury SSA record matched to a SIRA CTP record with a MAIS score of 2 (Moderate) or higher.
- **Minor / Other injury:** a person identified as an injury in SSA who is not matched to a hospital admission record or emergency department attendance record; or a previously defined No Injury SSA record matched to a SIRA CTP record with an MAIS score of 1 (Minor).

⁹ More information about how crash data is processed in NSW is available online at www.roadsafety.transport.nsw.gov.au.

- **Injury – Severity uncategorised:** a person identified as an injury in SSA prior to 2005 for which data linkage with health records is not available.
- **Casualty:** any person killed or injured because of a crash.
- **Casualty crash:** a crash that results in at least one person killed or injured.

Crash data reported from 2005 onwards includes additional detail regarding injury severity, and are categorised as:

- Serious Injury,
- Moderate Injury,
- Minor / Other Injury.

Prior to 2005, crash data was not matched to hospital admissions or emergency department presentations, so all non-fatal injuries prior to 2005 were uncategorised with respect to the severity of injury.

5.2.1.1 Updated serious injury definition

In previous years, NSW defined a serious injury to be an injury from a crash which resulted in a hospital admission.

Under the current definition, a serious injury is defined as:

- A person matched to a hospital admission that identifies an injury,
or
- A person that has a SIRA icare (Lifetime Care) claim.

This has decreased the number of serious injuries per year due to the removal of hospital admissions for reasons other than injury.

In addition, further investigation and linkage of hospital data has improved the identification of serious injuries, and refreshed some data, as outlined below.

5.2.1.2 Inclusion of additional moderate injuries

The Centre for Road Safety has identified a number of people injured in crashes that did not report to police as having been injured at the time of the crash, but have subsequently made a claim for an injury. These records were identified within Compulsory Third Party (CTP) insurance claims.

Additional records of people injured in a crash were also identified within the NSW Government's emergency department presentation records.

As a result, a number of moderate injuries have been added into SSA for people that were previously recorded as not injured. This had the effect of increasing the numbers of moderate and minor injuries for years 2005 to 2013 (when compared to the totals reported in some previous years).

6 Data parameters

6.1 Five years of data

Typically, at least five years of data are required to make an assessment of a camera's performance.¹⁰

As some camera locations or lengths have been operational for less than five years, the data for these locations are insufficient to reliably assess performance. Preliminary observations have instead been provided for these locations.

6.2 Time periods analysed

Data for the period before the installation of the camera (the "before" period) has been compared against data after the camera's commencement date (the "after" period, when warning letters and then infringements are issued).

To assess the current performance of the speed camera, the most recent five calendar year period (i.e. 2015 - 2019) is selected as the "after" period.

6.2.1 Pre-installation periods

For fixed, red-light and average speed camera programs, the five year "before" period ends three months prior to the "commencement date." This is to ensure that the "before" period does not capture the "pre-installation period" when behavioural changes may result from the presence of not-yet operational camera housing.

However, it should be noted that a significant portion of the red-light speed camera locations previously featured a wet-film red-light camera. (The wet-film red-light program preceded the red-light speed camera program). 85 of the 189 red-light speed camera locations previously featured a wet-film red-light camera.

Wet-film red-light cameras were operational for different periods of time, requiring there to be camera housing (poles and camera boxes) at the roadside at these locations. As a result, "before" data for a significant number of red-light speed cameras may have been impacted by drivers' perceptions that there was camera enforcement in place at these locations. It can be assumed that this would have improved drivers' compliance at these locations, compared to other sites where there were no camera housings in place.

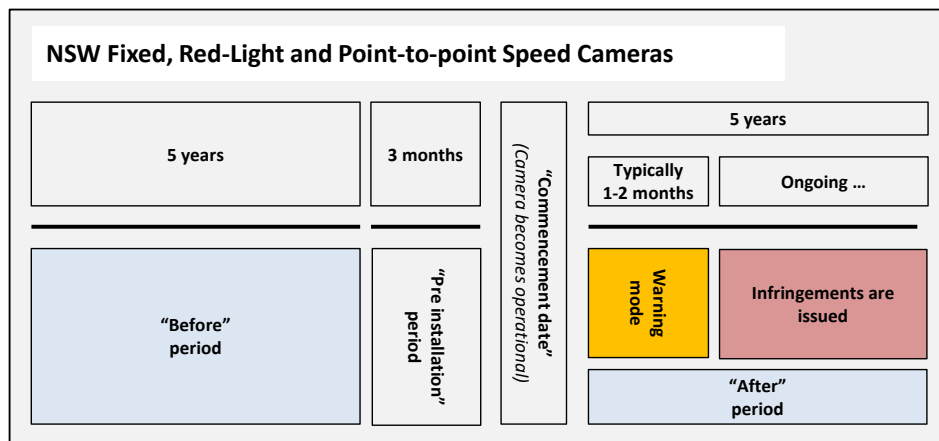

6.2.2 Warning mode periods

Fixed and red-light speed cameras generally operate in warning mode for a one-month period after the "commencement date". A one-month warning mode period also applied for mobile speed cameras when the program was introduced, but has not been applied since then.

NSW average speed camera lengths generally operate in warning mode for a two-month period after the "commencement date".

¹⁰ Austroads (2009). *Guide to Road Safety Part 8: Treatment of Crash Locations*. Publication No. AGRS08/09.

Figure 1: Before, After and Warning Mode periods

6.3 Crashes selected for analysis

When reviewing fixed, red-light and average speed cameras, crash data were examined at individual speed camera locations.

When reviewing mobile speed cameras, crash data were examined for the entire state, due to the nature of mobile speed cameras and their purpose of creating a general deterrence effect across the NSW road network.

6.4 State-wide crash data

State-wide crash data is provided to compare the crash outcomes at fixed and red-light speed camera locations against the rates of change observed across NSW.

6.5 State-wide comparison traffic volume data

The Australian Bureau of Infrastructure, Transport and Regional Economics publishes the yearbook of Australian Infrastructure Statistics each year.¹¹

NSW state-wide measures of vehicle kilometres travelled (VKT) as calculated for the yearbook are the basis of the state-wide vehicle volumes cited within this report.

6.6 State-wide speed survey data

Vehicle speeds were assessed state-wide via the CRS annual speed survey program.

In 2019, speed surveys for the CRS annual speed survey program were conducted at 166 NSW locations, including a range of roads with a range of speed limits, to gather current information about the speeding behaviour of both light vehicle drivers and heavy vehicle drivers.

The surveys measure free travel speeds, with a headway of four seconds. That is, only the speeds of vehicles that are unimpeded by other traffic are measured. Therefore the survey provides a measure of the speed that drivers choose to travel rather than a measure of traffic congestion.

¹¹ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

Speed surveys are not undertaken at specific speed camera enforcement locations. Because of this, this report instead uses infringement data at camera locations as a proxy for speed data.

6.7 Infringement data

Infringement data analysed in this report include penalty notices from July 2002 onwards. No earlier infringement data are available.

All fines from speed cameras are directed to the Community Road Safety Fund to pay for road safety programs across the state. Infringement data for red-light speed cameras, fixed speed cameras and mobile speed cameras are publicly available through the Revenue NSW website (<http://www.revenue.nsw.gov.au/info/statistics>).

7 Review methodology

7.1 Fixed speed camera locations

7.1.1 Fixed speed cameras analysed

While at the end of 2019 there were 110 fixed speed camera locations across NSW, road safety benefits were only assessed in detail for 97 fixed speed camera locations within this report.

13 fixed speed camera locations were excluded, as follows:

- Seven locations are currently operating in warning mode.¹² This report includes information on crashes, warning letters and infringements at these locations within Appendix A (sections A4 & A5).
- Six locations are located in tunnels (and were sometimes referred to in the review as “high risk” locations). These cameras were generally installed when the tunnel was constructed, therefore no pre-installation data are available. Post installation crash and infringement data for these locations is presented at section A6.

The 97 fixed speed camera locations analysed in this report have been operational for the following periods:

Table 4: Operational duration of NSW fixed speed cameras

NSW fixed speed cameras	
Operational for 5 years or more:	92 locations
Operational for less than 5 years:	5 locations
Total:	97 locations

7.1.2 Road length analysed for each camera

Crash data were typically examined within 500 metres either side of fixed speed cameras.

For fixed speed cameras located within a school zone, crash data were examined from patch-to-patch (i.e. the length of road designated as a school zone, as identified by the start and end 40 km/h patches marked on the road).

For locations with more than one camera in operation (where cameras are less than 100 metres apart), the crash analysis length was for 500 metres either side of the mid-point of the two cameras.

One fixed speed camera location - the M1 Princes Motorway (formerly the F6, Southern Freeway) Gwynneville - had two cameras operating approximately 1,000 metres apart and infringing in different directions. Within this report, the two cameras were listed as separate locations for the directions they enforce.

¹² For speed cameras operating in warning mode, warning letters are issued to motorists detected speeding, unless they exceed the speed limit by more than 30 km/h, in which case a court attendance notice is issued and drivers face significant penalties.

A three-strikes system also applies, where if a registered operator of a vehicle is issued two warning letters from the one camera location, an infringement will be issued for a third offence and any further offences at that location.

7.1.3 Recommendations

This report considered “before” and “after” crash analysis, and whether the fixed speed camera location has previously been comprehensively reviewed, to develop recommendations as follows:

Table 5: Developing recommendations for fixed speed cameras

Recommendation	Trigger	Outcome
Review	Major roadworks have been undertaken at the location <i>or</i>	TfNSW will undertake a comprehensive review of the camera location.
	There has been a statistically significant increase ¹³ in the number of casualty crashes, and the camera has not been reviewed in the last 5 years.	
Retain and monitor	There has been an increase in the number of casualty crashes, but it is not a statistically significant result.	The camera will continue to be used at the location. The location will also be flagged for ongoing monitoring in future reviews.
Retain	There has been no increase in casualty crashes <i>or</i>	The camera will continue to be used at the location.
	There has been an increase in the number of casualty crashes, but it is not a statistically significant result, and the location has been reviewed within the last 5 years <i>or</i>	
	There has been a statistically significant increase ¹⁴ in the number of casualty crashes, but the location has been reviewed within the last 5 years.	
Insufficient data	There is less than 5 years of ‘after’ data available.	The camera will be assessed once 5 years of “after” data is available.
Ineligible	There is a review currently underway at the location, <i>or</i>	TfNSW will complete the comprehensive review.
	The camera has been removed.	Nil.

¹³ A p-value of 0.05 has been applied to determine statistical significance

¹⁴ A p-value of 0.05 has been applied to determine statistical significance

7.1.4 Comprehensive reviews

Comprehensive reviews are undertaken as per the process in previous years. Depending on the findings of each comprehensive review, the fixed speed camera may be removed, and road safety treatments implemented to address any identified road safety risks. These treatments may involve improved signage, road works, traffic facilities, speed zoning reviews and targeted communications.

Transport for NSW is continuing a program of comprehensive speed camera reviews at the following locations, and has recently completed a program of community consultation:

- **Hungry Head** - Giinagay Way (formerly the Pacific Highway), between Boundary Road and Ballards Road
- **Valla Beach** - Giinagay Way (formerly the Pacific Highway), between Valla Beach Road and Oyster Creek
- **Bomaderry** - Bolong Road, between Beinda Street and Coomea Street
- **Brogo** - Princes Highway, between Pioneer Close and Brogo River
- **Burringbar** - Tweed Valley Way, between Blakeney's Road and Cooradilla Road
- **North Narrabeen** - Pittwater Road, between Garden Street and Namona Street (*School Zone*)
- **Queanbeyan** - Lanyon Drive, between Tompsitt Drive and Hoover Road
- **Rydalmere** - Victoria Road, between Park Road and John Road (*School Zone*)
- **Hartley** - Great Western Highway, between Mid Hartley Road and Blackmans Creek
- **Terrigal** - Terrigal Drive, between Brunswick Road and Bellbird Avenue (*School Zone*)
- **Moore Park** – ANZAC Parade at Lang Road (*RLSC location*).

7.1.5 Additional technical notes

Additional technical notes for the analysis of fixed speed cameras:

1. The commencement date listed for each location refers to the date that the fixed speed camera commenced infringement (or warning mode) at that location. For locations where more than one fixed speed camera is in operation, the date listed refers to the date that the *first camera* started infringing at that location, unless otherwise specified.
2. For each location, the “before” and “after” periods vary depending on the date the camera commenced infringement, and exclude the three-month period directly before the commencement date.
For each location, the “before” period was defined as the five-year period up to three months prior to the “commencement date” (when infringements commence). The “after” period was defined as the most recent five-year calendar period (2015 - 2019).
3. In instances when there was less than five years of “before” data, the “before” period was adjusted so that it represented an equivalent five-year period.

Additional technical notes for the analysis of fixed speed cameras:

4. The percentage reduction for crashes and casualties are based on the annual averages in crashes and casualties at each location in the “before” period and the “after” period. This allows an approximate comparison to be made between the five-year “before” period and the most recent five calendar year “after” period (2015 - 2019).
5. The estimated casualty cost for the “before” period and the most recent five calendar year “after” period was calculated using the willingness to pay methodology, which reflects the accumulated value the NSW community is willing to pay or forgo in exchange for a reduction in the probability of crash related injuries and road crash deaths on NSW roads.
The casualty costs used were based on the costs for the weighted average of urban and non-urban fatal and injury reductions, as follows:
 - * \$7,752,786 per fatality,
 - * \$495,874 per serious injury,
 - * \$77,472 per moderate or minor/other injury, and
 - * \$216,079 per uncategorised injury.
6. For each fixed speed camera location, a test of significance of the observed change in casualty crashes was conducted using the conditional method.¹⁵ This approach compared the number of casualty crashes in the “after” period with the conditional distribution of the casualty crashes in the “after” period given the total casualty crashes in both the “before” and “after” periods.
7. Data for the crash analysis have not been ranked and are presented alphabetically according to the location description of the camera location.
8. Crash costs are based on figures from TfNSW Economic Parameter Values, available at <https://www.transport.nsw.gov.au/news-and-events/reports-and-publications/tfnsw-economic-parameter-values>

7.2 Red-light speed camera locations

7.2.1 Red-light speed cameras analysed

At the end of 2019, there were 209 red-light speed cameras in total, operating at 189 intersections around Sydney, Newcastle and Wollongong. 19 intersections featured two or more cameras.

All red-light speed camera intersections were analysed in this report, and they have been operational for the following periods:

NSW red-light speed cameras	
Operational for 5 years or more:	145
Operational for less than 5 years:	44
Total:	189

¹⁵ Przyborowski, J., Wilenski, H., 1940. Homogeneity of results in testing samples from Poisson series. *Biometrika* 31, 313–323.

7.2.2 Road length analysed for each camera

Crash data were examined within 10 metres of each intersection with a red-light speed camera.

7.2.3 Analysis of specific crash types

In addition to total casualties at each location, pedestrian casualties were specifically examined given the greater exposure of pedestrians at signalised intersections and the higher likelihood of severe casualty outcomes for this group due to their lack of protection in a crash.

Data were also examined for adjacent, right-through and rear-end casualty crashes, as these are the crash types that typically occur at intersections. Adjacent and right-through crashes are often more severe as drivers and passengers are not as protected from side impact crashes, with low-speed side impact crashes potentially resulting in severe injuries. The frequency and severity of these crash types are expected to reduce at intersections enforced by red-light speed cameras.

Red-light speed cameras are intended to counteract the potential increase in rear-end crashes by also enforcing speed, as it is easier for drivers to brake in time to avoid a rear-end collision when they are driving at lower speeds.

7.2.4 Recommendations

This is the fourth year that sufficient data has been available to assess individual red-light speed camera locations.

This review considered “before” and “after” crash analysis to develop these recommendations. No red-light speed camera locations have previously been reviewed, so this was not a factor in developing recommendations.

Table 6 (overleaf) outlines the process for developing recommendations for red-light speed camera locations.

Table 6: Developing recommendations for red-light speed cameras

Recommendation	Trigger	Outcome
Review	There has been a statistically significant increase ¹⁶ in the number of fatal and serious injury crashes.	TfNSW will undertake a comprehensive review of the camera location.
Retain and monitor	There has been an increase in the number of fatal and serious injury crashes but it is not a statistically significant result.	The camera will continue to be used at the location. The location will also be flagged for ongoing monitoring in future reviews.
Retain	There has been no increase in fatal and serious injury crashes.	The camera will continue to be used at the location.
Insufficient data	There is less than 5 years of 'after' data available.	The camera will be assessed once 5 years of 'after' data is available.
Ineligible	There is a review currently underway at the location	TfNSW will complete the comprehensive review.

7.2.5 Additional technical notes

Additional technical notes for the analysis of red-light speed cameras

1. To identify crashes at each intersection, CRS initially examined crashes geo-coded to be within 200 metres of the traffic signals. Crashes were then assigned to the enforced intersection if they occurred within, or up to 10 metres from, the intersection.
2. These crashes were attributed to the relevant intersection by taking into account the geo-coding as well as the street name, identifying feature(s), and intersection type.
3. Where unclear, the correct location of the crash was confirmed or inferred from the original police report.
4. The commencement of the warning letter period was listed for each camera. For the analysis of intersections with two cameras, the "after" period was based on the earlier of the two commencement dates.
5. Data for each crash type (adjacent, right- and rear-end) was reported based on Road User Movement (RUM) codes. RUM codes describe the first impact that occurred during the crash. Adjacent crashes are indicated by RUM code 10; Right-crashes are coded 21 and rear-end crashes are coded 30. More information on RUM codes can be found in the Definition and notes to support road crash data at <http://roadsafety.transport.nsw.gov.au/downloads/definitions-notes.pdf>
6. The improvement rates for crashes and casualties were based on the annual averages in crashes and casualties at each location before and after the cameras were installed. This allowed an approximate comparison to be made between the five year "before" period and the available data for the "after" period until December 2019 (which is less than five years for a number of red-light speed camera locations).

¹⁶ A p-value of 0.05 has been applied to determine statistical significance

Additional technical notes for the analysis of red-light speed cameras

7. The estimated casualty cost for the “before” period and the most recent five calendar year “after” period was calculated using the willingness to pay methodology, which reflects the accumulated value the NSW community is willing to pay or forgo in exchange for a reduction in the probability of crash related injuries and road crash deaths on NSW roads. The casualty costs used were based on the costs for the urban fatal and injury reductions,
 - * \$7,425,549 per fatality,
 - * \$445,526 per serious injury, and
 - * \$68,550 per moderate or minor/other injury.
8. Crash data were not ranked and were presented alphabetically by suburb of the camera location.
9. Crash costs are based on figures from TfNSW Economic Parameter Values, available at <https://www.transport.nsw.gov.au/news-and-events/reports-and-publications/tfnsw-economic-parameter-values>

7.3 Mobile speed camera locations

7.3.1 Road lengths analysed

The entire NSW road network was analysed to review the general deterrence effect of the mobile speed camera program.

7.3.2 Program structure and periods of enforcement

The mobile speed camera program delivered 7,000 enforcement hours per month at 1,024 locations.

7.4 Average speed enforcement lengths

7.4.1 Average speed enforcement lengths analysed

The average speed camera program only targets heavy vehicles. The program includes 25 enforcement lengths ranging from 7 – 94km, and includes most major NSW highways. Enforcement lengths were installed over the following years:

Year	Lengths installed	
2010	2	(5 years of crash data is available for these lengths)
2011	14	
2012	4	
2013	1	
2014	3	
2015	1	(Less than 5 years of crash data is available for the lengths)
2016	0	
2017	0	
2018	0	
2019	0	
Total:	25	

As for previous years, heavy vehicle crash and infringement data are presented to facilitate analysis of the current impact of individual average speed enforcement lengths.

8 Results and discussion

This review has found that speed cameras are continuing to improve road safety in NSW. Results from the fixed, red-light, mobile and average speed camera programs show that drivers are changing their behaviour, which overall is resulting in a reduction in crashes and casualties at camera locations and across the road network. NSW's four speed camera programs are individually considered below.

8.1 Fixed speed cameras

Program size as at 31 December 2019: 140 cameras at 110 locations¹⁷

Median camera installation date: 1 May 2003

The analysis of individual fixed speed camera locations is available at **Appendix A**.

Overall, there has been a reduction in fatal crashes and casualty crashes at fixed speed camera locations since the cameras were installed, compared with the five year period prior to installation.

Specifically, at fixed speed camera locations there has been a:

- 40 per cent reduction in casualty crashes
- 63 per cent reduction in fatalities
- 45 per cent reduction in injuries.

The reduction in fatalities and injuries represents a saving of \$529 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period:

- 23 per cent reduction in casualty crashes
- 33 per cent reduction in fatalities
- 26 per cent reduction in injuries.

It should also be noted, alongside the crash data discussed above, that there has also been a notable increase in traffic volumes. Over the periods that fixed digital speed cameras have been reviewed within this report, there has been a 24 per cent increase in traffic volume across NSW.¹⁸

8.1.1 Individual fixed speed camera locations

Analysis within Appendix A has identified the following findings for individual camera locations:

¹⁷ Of the 110 fixed speed camera locations, seven locations operate in warning mode and six locations are high risk sites located in tunnels. Recommendations are not provided for these warning mode and high risk locations.

¹⁸ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

Table 7: Fixed speed camera locations status

Camera Status:		Number of Cameras
Insufficient data	A more comprehensive analysis over a longer time period is required before drawing any conclusions.	5
Ineligible	The camera has been removed or a review is currently underway	10
5 years of “after” data is available for the camera.	Retain	78
	Retain and monitor	4
	Review	0
Total:		97

The following table identifies fixed speed cameras with notable reductions in casualty crashes:

Table 8: Top performing fixed speed cameras

Location	Casualty crashes		Change in casualty crashes	% change
	Before	After		
Hinterland Way , Ewingsdale	14	0	↓ 14	↓ 100%
Greystanes Road , Greystanes	13	1	↓ 12	↓ 92%
Blackwall Drive , Wardell	7	1	↓ 6	↓ 86%
River Street , Woodburn	5	1	↓ 4	↓ 80%
Princes Highway , Bulli	26	6	↓ 20	↓ 77%

8.1.2 Fixed speed cameras identified to review / monitor

CRS has identified four camera locations that recorded an increase in casualty crashes. These increases were not statistically significant and the locations will be monitored in future years.

Table 9: Key crash data for identified fixed speed cameras

	Pre-Installation						Post-Installation					
	Crashes at mid-block	Crashes on curves	Wet surface crashes	Head-on crashes	Run-off-road crashes	Single vehicle crashes	Crashes at mid-block	Crashes on curves	Wet surface crashes	Head-on crashes	Run-off-road crashes	Single vehicle crashes
Bonnyrigg	16	2	11	1	8	8	3	0	1	0	0	0
Lochinvar	6	0	2	0	3	3	4	0	0	2	0	0
Nords Wharf	8	3	5	0	9	9	2	3	3	0	3	3
Rankin Park	9	9	9	2	8	8	6	3	3	0	3	1
Total	39	14	27	3	28	28	15	6	7	2	6	4
							↓ 62%	↓ 57%	↓ 74%	↓ 33%	↓ 79%	↓ 86%

Percentage change:

8.1.2.1 Bonnyrigg (Elizabeth Drive)

Casualty crashes at the Bonnyrigg (Elizabeth Drive) fixed digital speed camera location rose from 12 in the four years prior to installation of the camera, to 16 in the most recent five years (to the end of 2019).

However, despite the rise in the overall number of casualty crashes, the crash types likely to be improved by the presence of a fixed speed camera have improved over these periods. Speeding has also fallen by approximately 67 per cent at this location.

These outcomes represent a substantial road safety gain – particularly considering that vehicle volumes have risen by an estimated 29 per cent at this location since the camera was installed in the year 2000.

8.1.2.2 Lochinvar

Casualty crashes at the Lochinvar fixed digital speed camera location rose from three in the four years prior to installation of the camera, to five in the most recent five years (to the end of 2019).

However, despite the rise in the overall number of casualty crashes, the crash types most likely to be improved by the presence of a fixed speed camera have improved or remained constant over these periods. Speeding has also fallen by approximately 85 per cent at this location.

These outcomes represent a substantial road safety gain – particularly considering that vehicle volumes have risen by an estimated 29 per cent at this location since the camera was installed in 2000.

8.1.2.3 Nords Wharf

Casualty crashes at the Nords Wharf fixed digital speed camera location rose from two in the five years prior to installation of the camera, to four in the most recent five years (to the end of 2019).

However, despite the rise in the overall number of casualty crashes, the crash types most likely to be improved by the presence of a fixed speed camera have improved or remained constant over these periods. Speeding has also fallen by approximately 94 per cent at this location.

These outcomes represent a substantial road safety gain – particularly considering that vehicle volumes have risen by an estimated 25 per cent at this location since the camera was installed in 2003.

8.1.2.4 Rankin Park

This location was previously comprehensively reviewed and was retained after being determined to be contributing a road safety benefit.

Casualty crashes at the Rankin Park fixed digital speed camera location rose from three in the five years prior to installation of the camera, to nine in the most recent five years (to the end of 2019).

However, despite the rise in the overall number of casualty crashes, the crash types most likely to be improved by the presence of a fixed speed camera have improved over these periods. Speeding has also fallen by approximately 93 per cent at this location.

These outcomes represent a substantial road safety gain – particularly considering that vehicle volumes have risen by an estimated 25 per cent at this location since the camera was installed in 2003.

8.2 Red-light speed cameras

Program size as at 31 December 2019: 210 cameras at 189 intersections

Median camera installation date: 26 February 2013

The analysis of red-light speed camera locations is available at **Appendix B**.

Overall, there has been a reduction in fatal crashes and serious injury crashes at red-light speed camera locations since the cameras were installed, compared with the five year period prior to installation.

Specifically, at red-light speed camera locations there has been a:

- 35 per cent reduction in fatal and serious injury crashes
- 77 per cent reduction in fatalities
- 36 per cent reduction in serious injuries
- 59 per cent reduction in pedestrian casualties.

The reduction in fatalities and serious injuries represents a saving of \$150 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period:

- 7 per cent increase in fatal and serious injury crashes
- 12 per cent reduction in fatalities
- 8 per cent increase in serious injuries
- 33 per cent reduction in pedestrian casualties.

It should also be noted, alongside the crash data discussed above, that there has also been a notable increase in traffic volumes. Over the period that red-light speed cameras have been reviewed within this report, there has been a 14 per cent increase in traffic volume across NSW.¹⁹

8.2.1 Individual red-light speed camera locations

Analysis within Appendix B identifies the following findings for individual camera locations:

Table 10: Red-light speed camera location status

Camera Status:		Number of Fixed Speed Cameras
Insufficient data	A more comprehensive analysis over a longer time period is required before drawing any further conclusions.	44
5 years of “after” data is available for the camera.	Retain	110
	Retain and monitor	34
	Ineligible	1
Total:		189

The following table identifies red-light speed cameras with notable reductions in fatal / serious injury crashes:

¹⁹ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

Table 11: Top performing red-light speed cameras

Location	Fatal / Serious Injury crashes		Change in FSI crashes	% change
	Before	After		
Paddington / Surry Hills - South Dowling Street at Fitzroy Street / Moore Park Road	10	0	↓6	↓100%
Rockdale - Princes Highway at Bay Street / The Seven Ways	9	1	↓8	↓88.9%
Strathfield - Arthur Street at Centenary Drive	8	1	↓7	↓87.5%
Warwick Farm - Hume Highway at Bigge Street	7	1	↓6	↓85.7%
Campbelltown - Moore-Oxley Bypass at Broughton Street	5	1	↓4	↓80%

8.2.2 Red-light speed cameras identified to retain / monitor

34 locations recorded an increase in fatal and serious injury crashes – but that was not a statistically significant result. This figure was lower than the previous year in which there were 39 locations which recorded an increase in fatal and serious injury crashes. The 34 locations will be monitored closely in future years. 11 of these locations have been identified for monitoring for at least the past three years. Additional analysis for these locations is shown below.

Table 12: Key crash data for identified red-light speed cameras

	Pre-Installation					Post-Installation			
	Pedestrian casualties	Adjacent casualty crashes	Right through casualty crashes	Rear end casualty crashes		Pedestrian casualties	Adjacent casualty crashes	Right through casualty crashes	Rear end casualty crashes
Bexley - Forest Road at Harrow Road	1	1	4	7		2	1	2	11

	<i>Percentage change:</i>					<i>Nil.</i>	↓ 21%	↓ 37%	↑ 25%

8.2.2.1 Bexley (Forest Road at Harrow Road)

Fatal and serious injury crashes have increased from one crash in the five years prior to the installation of the camera, to three crashes in the most recent five calendar years to the end of 2019.

One of the crash types likely to be improved by the presence of a red-light speed camera (right through casualty crashes) has improved at this location, while two of the crash types (pedestrian and rear end casualty crashes) have worsened. Red-light running and speeding have also fallen by approximately 77 per cent and 76 per cent respectively, at this location.

8.2.2.2 Canley Vale (Sackville Street at Canley Vale Road)

Fatal and serious injury crashes have increased from one crash in the five years prior to the installation of the camera, to three crashes in the most recent five calendar years to the end of 2019.

One of the crash types likely to be improved by the presence of a red-light speed camera (rear end casualty crashes) has improved at this location, while two of the crash types (adjacent and right through casualty crashes) have worsened. Red-light running and speeding have also fallen by approximately 81 per cent and 80 per cent respectively, at this location.

Overall, these outcomes represent a road safety gain, particularly considering that traffic volumes have grown by an estimated 13 per cent at this location since the camera was installed in 2011.

8.2.2.3 Castle Hill (Showground Road at Victoria Avenue)

Fatal and serious injury crashes have increased from zero crashes in the five years prior to the installation of the camera, to four crashes in the most recent five calendar years to the end of 2019.

One of the crash types likely to be improved by the presence of a red-light speed camera (pedestrian casualty crashes) has remained steady at this location, while three of the crash types (adjacent, right through and rear end casualty crashes) have worsened. Red-light running and speeding have also fallen by approximately 57 per cent and 80 per cent respectively, at this location.

Overall, these outcomes may still represent a road safety gain, particularly considering that traffic volumes have grown by an estimated 13 per cent at this location since the camera was installed in 2011.

8.2.2.4 Five Dock (Fairlight Street at Ramsay Road)

Fatal and serious injury crashes have increased from two crashes in the five years prior to the installation of the camera, to four crashes in the most recent five calendar years to the end of 2019.

Two of the crash types likely to be improved by the presence of a red-light speed camera (pedestrian and adjacent casualty crashes) have improved at this location, while two of the crash types (right through and rear end casualty crashes) have remained steady. Red-light running and speeding have also fallen by approximately 78 per cent and 100 per cent respectively, at this location.

Overall, these outcomes represent a substantial road safety gain, particularly considering that traffic volumes have grown by an estimated 15 per cent at this location since the camera was installed in 2010.

8.2.2.5 Kirrawee (Acacia Road at President Avenue)

Fatal and serious injury crashes have increased from two crashes in the five years prior to the installation of the camera, to three crashes in the most recent five calendar years to the end of 2019.

Two of the crash types likely to be improved by the presence of a red-light speed camera (adjacent, right through and rear end casualty crashes) have improved at this location, while one of the crash types (pedestrian casualty crashes) has remained steady. Red-light running and speeding have also fallen by approximately 80 per cent and 77 per cent respectively, at this location.

Overall, these outcomes represent a substantial road safety gain, particularly considering that traffic volumes have grown by an estimated 13 per cent at this location since the camera was installed in 2011.

8.2.2.6 Kogarah Bay (Park Road at Princes Highway)

Fatal and serious injury crashes have increased from one crash in the five years prior to the installation of the camera, to four crashes in the most recent five calendar years to the end of 2019.

Two of the crash types likely to be improved by the presence of a red-light speed camera (adjacent and right through casualty crashes) have improved at this location, while two of the crash types (pedestrian and rear end casualty crashes) have remained steady. Red-light running and speeding have also fallen by approximately 62 per cent and 80 per cent respectively, at this location.

Overall, these outcomes represent a substantial road safety gain, particularly considering that traffic volumes have grown by an estimated 13 per cent at this location since the camera was installed in 2011.

8.2.2.7 Milperra (Newbridge Road at Henry Lawson Drive)

Fatal and serious injury crashes have increased from one crash in the five years prior to the installation of the camera, to three crashes in the most recent five calendar years to the end of 2019.

Two of the crash types likely to be improved by the presence of a red-light speed camera (pedestrian and right through casualty crashes) have improved at this location, while one of the crash types (rear end casualty crashes) has worsened.

Red-light running and speeding have also fallen by approximately 86 per cent and 99 per cent respectively, at this location.

Overall, these outcomes represent a substantial road safety gain, particularly considering that traffic volumes have grown by an estimated 15 per cent at this location since the camera was installed in 2010.

8.2.2.8 North Ryde (Wicks Road at Epping Road)

Fatal and serious injury crashes have increased from one crash in the five years prior to the installation of the camera, to four crashes in the most recent five calendar years to the end of 2019.

One of the crash types likely to be improved by the presence of a red-light speed camera (adjacent casualty crashes) has improved at this location, while one of the crash types (rear end casualty crashes) has worsened. Red-light running and speeding have also fallen by approximately 54 per cent and 75 per cent respectively, at this location.

Overall, these outcomes represent a road safety gain, particularly considering that traffic volumes have grown by an estimated 15 per cent at this location since the camera was installed in 2010.

8.2.2.9 Petersham (Gordon Street at New Canterbury Road)

Fatal and serious injury crashes have increased from zero crashes in the five years prior to the installation of the camera, to one crash in the most recent five calendar years to the end of 2019.

Two of the crash types likely to be improved by the presence of a red-light speed camera (adjacent and right through casualty crashes) have improved at this location, while one of the crash types (rear end casualty crashes) has worsened. Red-light running has also fallen by approximately 85 per cent at this location.

Overall, these outcomes represent a substantial road safety gain, particularly considering that traffic volumes have grown by an estimated 15 per cent at this location since the camera was installed in 2010.

8.2.2.10 South Wentworthville (Cumberland Highway at Old Prospect Road)

Fatal and serious injury crashes have increased from three crashes in the five years prior to the installation of the camera, to four crashes in the most recent five calendar years to the end of 2019.

One of the crash types likely to be improved by the presence of a red-light speed camera (right through casualty crashes) has improved at this location, while one of the crash types (rear end casualty crashes) has worsened. Red-light running and speeding have also fallen by approximately 68 per cent and 77 per cent respectively, at this location.

Overall, these outcomes represent a road safety gain, particularly considering that traffic volumes have grown by an estimated 13 per cent at this location since the camera was installed in 2011.

8.2.2.11 Thornleigh (Pennant Hills Road at Parkes Street)

Fatal and serious injury crashes have increased from zero crashes in the five years prior to the installation of the camera, to two crashes in the most recent five calendar years to the end of 2019.

Three of the crash types likely to be improved by the presence of a red-light speed camera (adjacent, right through and rear end casualty crashes) have remained steady at this location, while one of the crash types (pedestrian casualty crashes) has worsened. Red-light running and speeding have also fallen by approximately 56 per cent and 63 per cent respectively, at this location.

Overall, these outcomes may still represent a road safety gain, particularly considering that traffic volumes have grown by an estimated 15 per cent at this location since the camera was installed in 2010.

8.3 Mobile speed cameras

The analysis of the mobile speed camera program is available at **Appendix C**.

There were 353 fatalities on NSW roads in 2019. This was an increase compared with the 2018 figure (347) but was significantly below the 2009 figure of 453 (prior to the reintroduction of mobile speed cameras in 2010).

The NSW fatality rate per 100,000 population was 4.4 in 2019. This was slightly higher than the 2018 figure (4.3) but remains significantly below the 2009 figure of 6.4.

Annual speed survey data indicate that the mobile speed camera program continues to deliver road safety benefits, compared to results prior to the reintroduction of the mobile speed camera program.

8.3.1 Light vehicles

NSW speed survey data for the last nine years shows a reduced proportion of light vehicles exceeding the speed limit, across most speed zones.

Comparing the 2019 speed survey results against those from 2018, there is was an increased proportion of light vehicles exceeding the speed limit, for all speed zones except for in the 70 km/h zone. The percentage of vehicles exceeding the speed limit by 10 km/h or more has decreased in all speed zones except in the 90 km/h (small sample), 100 km/h and 110 km/h.

8.3.2 Heavy vehicles

Comparing the 2019 speed survey results against those from 2018, there is was an increased proportion of heavy vehicles exceeding the speed limit, for all speed zones except for in the 40 km/hr and 80 km/h zone. The percentage of heavy vehicles exceeding the speed limit by 10 km/h or more has increased in all speed zones except in the 40 km/h, 60 km/hr and 80 km/hr.

8.3.3 Infringements

In 2019 there were a total of 29,162 infringements issued from mobile speed camera enforcement resulting in \$5.9 million of fines. The cost of conducting the mobile speed camera program in 2019 was \$12.7 million.

The total number of mobile speed camera infringements issued in 2019 increased by 22 per cent compared to 2018.

8.3.4 Vehicle compliance rate

In 2019 the compliance rate was 99.9%. This high rate of compliance has remained consistent since 2010 when the program was reintroduced.

Overall, the trend in road fatalities, infringements and annual speed survey data demonstrates that the mobile speed camera program has delivered road safety benefits over the years since the program was re-introduced in 2010.

8.4 Average speed cameras

The analysis of the average speed camera program is available at **Appendix D**.

8.4.1 Crash Data

Overall, there has been a reduction in fatal crashes and casualty crashes involving a heavy vehicle on NSW average speed enforcement lengths since those lengths were installed, compared with the five year period prior to installation.

Across heavy vehicle average speed camera lengths, there has been a:

- 29 per cent reduction in casualty crashes involving a heavy vehicle
- 51 per cent reduction in fatalities from crashes involving heavy vehicles
- 18 per cent reduction in serious injuries from crashes involving heavy vehicles.

The reduction in fatalities and serious injuries represents a saving of \$174 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period for crashes involving heavy vehicles:

- 18 per cent reduction in casualty crashes involving a heavy vehicle
- 15 per cent reduction in fatalities from crashes involving heavy vehicles
- 15 per cent increase in serious injuries from crashes involving heavy vehicles.

It should also be noted, alongside the crash data discussed above, that there has also been a notable increase in heavy vehicle traffic volumes. Over the period that heavy vehicle average speed enforcement lengths have been reviewed within this report, there has been a 15 per cent increase in heavy vehicle volume across NSW.²⁰

8.4.2 Infringement Data

A total of 2,091 speeding infringements, resulting in total fines of \$988,862 were issued at NSW average speed camera lengths in 2019.

Overall, there has been a reduction in fatal crashes and casualty crashes involving a heavy vehicle on NSW average speed enforcement lengths since those lengths were installed, compared with the five year period prior to installation.

This represents a particularly notable road safety improvement when compared to NSW heavy vehicle volumes, which have risen 15 per cent over the same period.²¹

NSW is currently expanding the heavy vehicle average speed camera program to metropolitan areas, and CRS will continue to monitor the program.

²⁰ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

²¹ Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*

A. NSW fixed speed cameras

A.1 The NSW fixed speed camera program

As at 31 December 2019, there were 140 fixed speed cameras in place at 110 locations across NSW. The median installation date for NSW fixed speed cameras was 1 May 2003.

Fixed speed cameras are located at specified road lengths where there is a demonstrated crash history or a high crash risk, to detect and deter speeding at specific locations.

In managing the program, Transport for NSW (TfNSW) may increase the warning letter period and/or use Variable Message Signs to increase driver awareness of camera locations, where the trend in warning letters or number of infringements issued deems this appropriate. TfNSW also conducts ongoing site maintenance to ensure that signage is effectively placed and not obscured by roadside objects, such as trees.

A table outlining the detailed analysis of 97 NSW fixed speed camera locations is provided overleaf, and data about those individual camera locations are provided on pages A7 – A103.

Detailed analysis is not provided for 10 fixed speed camera locations, for the following reasons:

- Seven locations are currently operating in warning mode.¹ This report includes information on crashes, warning letters and infringements at these locations within sections A4 & A5.
- Six locations are located in tunnels (and were sometimes referred to in the review as “high risk” locations). These cameras were generally installed when the tunnel was constructed, therefore no pre-installation data are available. Post installation crash and infringement data for these locations is presented at section A6.

¹ For speed cameras operating in warning mode, warning letters are issued to motorists detected speeding, unless they exceed the speed limit by more than 30km/h, in which case a court attendance notice is issued and drivers face significant penalties.

A three-strikes system also applies, where if a registered operator of a vehicle is issued two warning letters from the one camera location, an infringement will be issued for a third offence and any further offences at that location.

A.2 NSW fixed speed camera locations

	Location	Cameras	Road	Status	Page
1	Ashfield (sz)	1	Hume Highway, between Murrell Street and Queen Street	Retain	A7

Total:		120			

Crash and infringement data for these 97 camera locations are individually presented overleaf.

(sz: school zone)

9820: Ashfield - Hume Highway, between Murrell Street and Queen Street

School zone: Ashfield Public School

This location is 410m (patch to patch) in length, and is enforced with one camera. The camera commenced operating on 7 August 2007.

Casualties and Casualty Crashes

	5 years before installation ¹	5 years to end 2019	
		Count	Percentage Change ²

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 28% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.
- The infringement graph details the trend in infringements at this location since the camera began operating. Roadworks and camera maintenance may influence the number of infringements issued.
- This location was reviewed in 2013 due to concerns about the increase in casualties in recent years. In the 2013 review it was recommended that the speed camera be retained.

9534: Auburn - Parramatta Road, between Harbord Street and Duck Street

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 15 May 2002.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 23% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since the camera began operating. Roadworks and camera maintenance may influence the number of infringements issued.

- This location was reviewed in 2013 due to concerns about the increase in casualties in recent years. The review found that during 2011 there were 28 casualties. This significant increase in the number of casualties included one crash involving a bus, resulting in 11 casualties. The number of casualty crashes has reduced in the following years. Speeding infringements were also found to have significantly reduced following the introduction of the speed cameras. It was recommended that the speed cameras be retained.

9616: Bar Point - M1 Pacific Motorway, between Jolls Bridge and Mt White Exit Ramp

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 10 April 2006.

Status : **Retain and monitor**

(There has been an increase in casualty crashes at this location, but the increase is not statistically significant. This location has not previously identified for review.)

- When comparing the pre installation period to the most recent five year period, there has been a 7% increase in casualty crashes at this fixed speed camera location. The increase in casualty crashes is not statistically significant. The data presented do not account for the prevailing statewide trend.
- The infringement graph details the trend in infringements at this location since July 2002. Infringement data before this date is not available. The spike in infringements from July 2007 can be attributed to the camera commencing speed enforcement of both directions of traffic where it previously enforced one direction. Since then, there has been a reduction in speeding behaviour at this location over time. Roadworks and camera maintenance may influence the number of infringements issued.
- A desktop review of this location was undertaken in 2015.

9612: Brogo - Princes Highway, between Pioneer Close and Brogo River

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 2 May 2003.

¹ Ending 7 September 2001, 3 calendar months before installation.

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 41% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since July 2002. Infringement data before this date is not available. Roadworks and camera maintenance may influence the number of infringements issued.

- This location was reviewed in 2012 due to concerns that crashes and casualties at this location had increased. The comprehensive review found that the camera only has an impact on the eastbound direction of traffic because the camera only enforces in this direction and there is a very wide median at the camera location. Therefore the camera was found to be effective and this crash analysis looks only at the eastbound carriageway of New South Head Road.

9669: Engadine - Heathcote Road, between Forum Drive and New Illawarra Road

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 4 June 2017.

¹ Ending 4 April 2002, 3 calendar months before installation.

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 69% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.
- The infringement graph details the trend in infringements at this location since the camera began operating. Roadworks and camera maintenance may influence the number of infringements issued.
- This location was reviewed in 2013 due to concerns about the increase in crashes and casualties in recent years. The 2013 review found that since the speed camera was installed, the number of crashes per year had decreased. The review also found that the number of injury crashes per year decreased. While there was one fatal crash with one fatality prior to the installation of the speed camera, there have been no fatalities since the camera has been in operation. Therefore based on this information, the speed camera has been retained.

9637: Gateshead - Pacific Highway, between Sydney Street and Macquarie Avenue

School zone: Hunter Sports High School, Gateshead Public School, St Mary's High School

This location is 820m (patch to patch) in length, and is enforced with one camera.

The camera commenced operating on 30 May 2000.

Status : [Retain and monitor](#)

(There has been an increase in casualty crashes at this location, but the increase is not statistically significant. This location has not previously identified for review.)

- When comparing the pre installation period to the most recent five year period, there has been a 33% increase in casualty crashes at this fixed speed camera location. The increase in casualty crashes is not statistically significant. The data presented do not account for the prevailing statewide trend.
- The infringement graph details the trend in infringements at this location since July 2002. Infringement data before this date is not available. The spike in infringements from September 2007 was due to the camera commencing speed enforcement of both directions of traffic where it previously enforced one direction. Roadworks and camera maintenance may influence the number of infringements issued.
- This location was reviewed in 2012 due to concerns that casualties had increased slightly. The comprehensive safety review found that since the speed camera was installed, traffic volumes had increased significantly due to mining activities in the Hunter region. Given the increase in traffic volume, the adjusted casualty rate indicated that the speed camera has been effective in reducing casualties. Further, there was strong community support for the retention of the speed camera due to its location in a school zone where safety is a high priority. Therefore the speed camera at this location was retained.

9813|9814: Maroubra - Malabar Road, between Mons Avenue and Duncan Street

School zone: St Mary and St Joseph's Primary, Maroubra Bay

This location is 680m (patch to patch) in length, and is enforced by 2 cameras.

Both cameras commenced operating on 20 June 2007.

Casualty Crashes	11	6	↓ 45%
Casualty Cost:	\$3.03M	\$1.30M	↓ 57%

¹ Ending 20 March 2007, 3 calendar months before installation.

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 45% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since the camera began operating. The spike in infringements in early 2015 is due to a number of infringements having been issued in error. Infringement notices were withdrawn. Roadworks and camera maintenance may influence the number of infringements issued.

9582: Mayfield West - Pacific Highway, between Werribee Street and Tourle Street

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 23 December 2002.

Casualties and Casualty Crashes

¹ Ending 27 November 2002, 3 calendar months before installation.

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Ineligible**

(There is currently a review underway at this location.)

- When comparing the pre installation period to the most recent five year period, there has been a 73% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since the camera began operating. The extended period of camera downtime from December 2010 to June 2012 was due to road works. The subsequent spike in infringements in June 2012 may be attributed to a change in speed limit as the area became a school zone in March 2012. Roadworks and camera maintenance may influence the number of infringements issued.

- In 2014, major road safety and traffic works commenced at this location. The camera and accompanying signage has been removed. The location will be reviewed now that works are complete and a final decision will be made about the need for ongoing enforcement.

- For the 2017 Annual Review, this location was analysed as a School Zone.

9802|9803: Toongabbie - Fitzwilliam Road, between Reynolds Street and Binalong Road

School zone: Toongabbie Public School

This location is 590m (patch to patch) in length, and is enforced by 2 cameras. Both cameras commenced operating on 16 May 2007.

Status : **Ineligible**

(There is currently a review underway at this location.)

- When comparing the pre installation period to the most recent five year period, there has been a 40% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since July 2002. Infringement data before this date is not available. The spike in infringements from May 2011 can be attributed to the speed limit changing from 100km/h to 80km/h. The speed limit was changed due to the poor safety record of this section of the Pacific Highway. Following an adjustment period, the graph shows there has been a reduction in speeding from the end of 2012. Roadworks and camera maintenance may influence the number of infringements issued.

9548: Valley Heights - Great Western Highway, between The Valley Road and Sun Valley Road

This location is 1000m in length, and is enforced with one camera.

¹ Ending 28 October 2008, 3 calendar months before installation.

² The percentage change is based on annualised crash data to allow for a direct comparison between the pre and post installation time periods. Red values indicate an increase.

Status : **Retain**

(There has been no increase in casualty crashes.)

- When comparing the pre installation period to the most recent five year period, there has been a 17% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since the camera began operating. Roadworks and camera maintenance may influence the number of infringements issued.

9570: Wardell - Blackwall Drive, between Coolgardie Road and Fitzroy Street

This location is 1000m in length, and is enforced with one camera.
The camera commenced operating on 24 February 2003.

Casualties and Casualty Crashes

	5 years before installation ¹	5 years to end 2019	
		Count	Percentage Change ²

- When comparing the pre installation period to the most recent five year period, there has been a 21% decrease in casualty crashes at this fixed speed camera location. The data presented do not account for the prevailing statewide trend.

- The infringement graph details the trend in infringements at this location since July 2002. Infringement data before this date is not available. Roadworks and camera maintenance may influence the number of infringements issued.

A. NSW fixed speed cameras

A.3 Fixed speed camera locations with the most infringements

In April 2013, NRMA Motoring & Services called for an assessment of all high infringing speed camera locations across the state to determine whether the cameras were appropriately placed and clearly signposted.

The NSW Centre for Road Safety (CRS) has identified the 10 fixed speed camera locations with the highest number of infringements detected in 2019, detailed in the table overleaf. Cameras in high-risk locations are excluded.

The 10 speed camera locations are on main roads with high traffic volumes. None of the 10 highest infringing fixed speed camera locations were identified in this review for review or ongoing monitoring.

All camera locations had high compliance rates with more than 99 per cent of drivers passing the cameras without being infringed for speeding. This demonstrates that most drivers are aware of the cameras and do not exceed the speed limit, with less than one per cent of drivers penalised. It is this high level of compliance that provides road safety benefits. Compliance data compares the number of vehicles that pass a camera with the number of infringements issued by the camera.

CRS will continue to monitor infringement numbers at camera locations to identify and address any ongoing road safety risks. As is the case currently, Transport for NSW (TfNSW) may increase the warning letter period and/or use Variable Message Signs to increase driver awareness of speed camera locations, where the trend in warning letters or number of infringements issued deems this appropriate. Ongoing site maintenance is also conducted by TfNSW to ensure that signage is effectively placed and not obscured by roadside objects, such as trees.

Fixed speed camera locations with the most infringements

	Location (commencement date)	Number of cameras	Infringements (Total: 2018)	Infringements (Total: 2019)	Compliance rate (2019)
1	Mount Victoria - Great Western Highway, between Mitchells Lookout Road and Ambermere Drive (July, 2015)	1	18,877	15,797	99.64%
2	Moore Park - Cleveland Street between Anzac parade and South Dowling Street (school zone) (November, 2007)	2	15,789	12,997	99.87%
3	Ulmarra - Big River Way between River Street and George Street (November, 2019)	2	N/A	11,638	99.69%
4	Ewingsdale – Hinterland Way, between St Helena Road and Ewingsdale Road (September, 2006)	1	8,244	11,559	99.67%
5	Randwick - Avoca Street, between Howard Street and Barker Road (school zone) (June, 2007)	1	7,732	10,244	99.87%
6	Kogarah - Princes Highway, between Gray Street and President Avenue (school zone) (July, 2003)	2	9,541	9,648	99.96%
7	Wahroonga - Pacific Highway between Gilda Avenue and Woodville Avenue (school zone) (January, 2009)	2	10,328	9,039	99.95%
8	Rosebery/Alexandria - Botany Road, between Gardeners Road and Gillespie Street (school zone) (June, 2007)	2	7,907	7,394	99.91%
9	Gwynneville - M1 Princes Motorway, between Northern Distributor Overpass and Gipps Road Overpass (Northbound) (August, 2003)	1	8,410	6,921	99.92%
10	Bankstown - Hume Highway, between Rookwood Road and Stacey Street (school zone) (July, 2007)	2	6,022	6,691	99.96%

A. NSW fixed speed cameras

A.4 Fixed speed cameras operating in warning mode

Following the results of the 2011 audit of speed cameras, the then Minister for Roads and Freight directed the deactivation of fixed speed cameras that were found to not be delivering the expected road safety benefit at 38 locations.

However, cameras at seven of locations remain in warning mode following reviews by the Centre for Road Safety and safety concerns expressed by the community.

These seven warning mode locations are not included in the detailed analysis provided earlier within this appendix. Crash and infringement results for 2019 are instead provided overleaf.

A.5 ‘Three strikes’ warning scheme

These seven cameras began operating in warning mode at different times, starting from August 2011. By July 2012, cameras at all seven locations commenced operating under a ‘three strike’ scheme where vehicle owners receive an infringement notice on the third speeding offence at any of the seven locations. Vehicles detected speeding more than 30km/h over the speed limit receive a court attendance notice and face significant penalties.

The table overleaf shows that there is a significant decrease in the number of warning notices from the issuing of a first warning notice, to the second warning notice and subsequent infringement notice for a third strike.

Performance at fixed speed camera locations operating in warning mode (2019)

Location (commencement date)	No. of cameras	Casualty crashes and casualties 2019					Warning letters and infringements issued under '3 strikes' program				Court attendance notices issued		
		Fatalities	Serious injuries	Moderate injuries	Minor / other injuries	Casualty crashes	1 st warning letter	2 nd warning letter	3 rd speeding offence (infringement issued)	Total number of warning letters and letters and infringements	Vehicles speeding >30km/h	Vehicles speeding >45km/h	Total number of notices issued
1. Bangalow Road, Clunes (August 2011)	1	0	0	0	0	0	5,083	540	278	5,901	335	45	380
2. Spit Road, Mosman / Beauty Point (June 2012)	2	0	1	1	5	6	3,533	430	218	4,181	50	9	59
3. Carlingford Road, North Epping (school zone) (June 2012)	1	0	0	0	0	0	2,488	367	189	3,044	34	12	46
4. Giinagay Way, Urunga (January 2012)	1	0	0	0	0	0	1,562	224	125	1,911	61	36	97
5. President Avenue, Gymea (school zone) (August 2011)	1	0	0	1	2	2	1,183	136	50	1,369	28	2	30
6. Eastern Valley Way, North Willoughby (July 2012)	1	0	1	2	1	3	718	79	26	823	10	3	13
7. Eastern Arterial Road, Gordon (June 2012)	1	0	1	0	0	1	238	18	11	267	6	0	6
Totals:	8	0	3	4	8	12	14,805	1,794	897	17,496	524	107	631

A. NSW fixed speed cameras

A.6 Fixed speed cameras at high risk locations

There are fixed speed cameras in place at the following high risk locations:

	Location	Cameras	Road
1	Bardwell Park / Arncliffe	2	M5 Motorway
2	Darlinghurst	2	Eastern Distributor
3	Lane Cove	2	Lane Cove Tunnel
4	Sydney	2	Sydney Harbour Tunnel
5	Woolloomooloo / East Sydney	2	Cross City Tunnel
6	Croydon	2	WestConnex M4 East Tunnel
	Total:	12	

These cameras were generally installed when the tunnel was constructed, therefore no pre-installation data are available for these high risk locations. Recommendations are not provided for these high risk locations.

Crash and infringement data are presented on pages A109 – A113. The WestConnex M4 East Tunnel fixed speed cameras commenced operation on 12 September 2019 and due to the limited period of operation, no data is presented for this location.

9551|9552: Bardwell Park/Arncliffe - M5 Motorway

This is a high risk location that is enforced with fixed speed cameras, because it is difficult for the NSW Police to enforce. The length of each enforced direction is:

- Camera 1 (eastbound) 3975m
- Camera 2 (westbound) 3965m

The cameras commenced operating on 1 August 2002.

- In the eastbound direction, there were 6 casualty crashes in the 2019 data. This resulted in 3 serious injuries, 2 moderate injuries, and 2 minor injuries.
- In the westbound direction, there were 5 casualty crashes in the 2019 data. This resulted in 1 serious injury, 2 moderate injuries, and 2 minor injuries.
- The infringement graphs show the number of infringements issued at this location by direction, as well as the trend in infringements. Roadworks and camera maintenance may influence the number of infringements issued.

Camera 1 Eastbound

Camera 2 Westbound

9635|9641: Darlinghurst - Eastern Distributor

This is a high risk location that is enforced with fixed speed cameras, because it is difficult for the NSW Police to enforce. This location is 1645m in length, and the two cameras commenced operating on:

- Camera 1 (Northbound) 30 November 2000
- Camera 2 (Southbound) 30 November 2000

- In the northbound direction, there was 1 casualty crash in the 2019 data. This resulted in 1 minor injury.
- In the southbound direction, there was 1 casualty crash in the 2019 data. This resulted in 1 minor injury.
- The infringement graphs show the number of infringements issued at this location by direction, as well as the trend in infringements. Roadworks and camera maintenance may influence the number of infringements issued.

Camera 1 Northbound

Camera 2 Southbound

9655|9656: Lane Cove - Lane Cove Tunnel

This is a high risk location that is enforced with fixed speed cameras, because it is difficult for the NSW Police to enforce. The length of each enforced direction is:

- Camera 1 (eastbound) 3610m
- Camera 2 (westbound) 3615m

The cameras commenced operating on 25 March 2007.

- In the eastbound direction, there were no casualty crashes in the 2019 data.
- In the westbound direction, there were no casualty crashes in the 2019 data.
- The infringement graphs show the number of infringements issued at this location by direction, as well as the trend in infringements. Roadworks and camera maintenance may influence the number of infringements issued.

Camera 1 Eastbound

Camera 2 Westbound

9800|9801: Sydney - Sydney Harbour Tunnel

This is a high risk location that is enforced with fixed speed cameras, because it is difficult for the NSW Police to enforce. The length of each enforced direction is:

- Camera 1 (northbound) 2295m
- Camera 2 (southbound) 2295m

The cameras commenced operating on 2 August 2002.

- In the northbound direction, there were 2 casualty crashes in the 2019 data. This resulted in 2 serious injuries, and 1 minor injury.
- In the southbound direction, there was 1 casualty crash in the 2019 data. This resulted in 2 moderate injuries.
- The infringement graphs show the number of infringements issued at this location by direction, as well as the trend in infringements. Roadworks and camera maintenance may influence the number of infringements issued.

Camera 1 Northbound

Camera 2 Southbound

9613|9614: Woolloomooloo/East Sydney - Cross City Tunnel

This is a high risk location that is enforced with fixed speed cameras, because it is difficult for the NSW Police to enforce. The length of each enforced direction is:

- Camera 1 (eastbound) 2145m
- Camera 2 (westbound) 2090m

The cameras commenced operating on 5 September 2005.

- In the eastbound direction, there were no casualty crashes in the 2019 data.
- In the westbound direction, there were no casualty crashes in the 2019 data.
- The infringement graphs show the number of infringements issued at this location by direction, as well as the trend in infringements. Roadworks and camera maintenance may influence the number of infringements issued.

Camera 1 Eastbound

Camera 2 Westbound

B. NSW red-light speed cameras

B.1 The red-light speed camera program

As at 31 December 2019, there were 210 red-light speed cameras in place at 189 locations across NSW. The median installation date for NSW red-light speed cameras was 26 February 2013.

Red-light speed cameras are installed at specific signalised intersections where drivers are vulnerable to right angle crashes and there is an elevated risk of a pedestrian crash. These cameras detect and deter both speeding and red-light running, both of which can result in severe injuries even in lower speed crashes.

In managing the program, Transport for NSW (TfNSW) may increase the warning letter period and/or use Variable Message Signs to increase driver awareness of camera locations, where the trend in warning letters or number of infringements issued deems this appropriate. TfNSW also conducts ongoing site maintenance to ensure that signage is effectively placed and not obscured by roadside objects, such as trees. In late 2012, TfNSW also improved the road signs at red-light speed camera locations.

A table outlining NSW red-light speed camera locations is provided overleaf, and data about individual camera locations are provided on pages B9 – B197.

B.2 Red-light speed camera locations

Red-light speed cameras are installed across NSW, as follows:

	Location	Cameras	Road	Status	Page
1	Adamstown	1	Park Avenue at Northcott Drive	Retain	B9
2	Alexandria	1	Collins Street at O'Riordan Street	Retain and monitor	B10
3	Alexandria / Waterloo	2	McEvoy Street at Botany Road	Retain and monitor	B11
4	Ashfield	1	Frederick Street at Hume Highway	Retain	B12
5	Auburn	1	Chisholm Road at Mona Street	Retain	B13
6	Auburn	1	Rawson Street at Northumberland Road	Insufficient data	B14
7	Auburn	1	Rawson Street at Station Road	Retain	B15

B. NSW red-light speed cameras

B.3 Red-light speed camera locations with the most infringements

In 2013, NRMA Motoring & Services called for an assessment of all high infringing speed camera locations across the state to determine whether the cameras were appropriately placed and clearly signposted.

The 10 red-light speed camera locations with the highest number of infringements for the 2019 calendar year are detailed in the table overleaf, and discussed below.

B.3.1 Total infringements

All of the 10 red-light speed camera locations with the most infringements are on roads with significant traffic volumes.

All ten camera locations will be retained based on the analysis included at pages B20, B58, B59, B86, B98, B125, B126, B137, B173, B187. The majority of infringements were issued for speeding offences at the Lambton, North Ryde, Pennant Hills, Darlinghurst and West Pymble camera locations, while the majority of infringements are issued for red-light offences at the Sydney, Haymarket, Bankstown and Neutral Bay camera locations.

B.3.2 Composition of speed and red-light infringements

Across the red-light speed camera program:

- Approximately 61 per cent of infringements at red-light speed camera locations are attributed to running a red light, and
- Approximately 39 per cent of infringements at red-light speed camera locations are attributed to speeding.

For the 10 highest infringing camera locations, the division between the two types of infringements is site-dependent, with six of the locations having a higher proportion of speed infringements and four having a higher proportion of red-light infringements.

B.3.3 Compliance rate

The compliance rate shown in the table overleaf compares the number of vehicles that pass a camera with the number of infringements issued by the camera.

All camera locations had high compliance rates with more than 99 per cent of drivers passing the cameras without being infringed for red-light running and/or speeding. This demonstrates that most drivers stop on a red signal and do not exceed the speed limit, with less than one per cent of drivers penalised. It is this high level of compliance that provides road safety benefits.

Red-light speed camera locations with the most infringements

	Location (commencement date)	Number of cameras	Infringements (Total: 2018)	Infringements (Total: 2019)	% of red light and speed infringements (2019)	Compliance rate (2019)
1	Lambton - Griffiths Road at Turton Road (June 2011)	1	8,411	10,165	94.20% speed 5.80% red-light	99.78%
2	Sydney - Elizabeth Street at Park Street (September 2014)	1	10,729	9,822	48.21% speed 51.79% red-light	99.85%
3	Haymarket - George Street at Pitt Street / Quay Street (June 2013)	2	10,262	7,453	12.96% speed 87.04% red-light	99.88%
4	Bankstown - Stacey Street at Hume Highway (April 2013)	1	7,290	6,070	2.09% speed 97.91% red-light	99.94%
5	North Ryde - Cox's Road at Lane Cove Road (school zone) (April 2013)	3	7,322	5,996	66.99% speed 33.01% red-light	99.97%
6	Pennant Hills - Pennant Hills Road at Beecroft Road (school zone) (September 2010)	1	3,595	4,658	92.16% speed 7.84% red-light	99.95%
7	Darlinghurst - Oxford Street at Crown Street (September 2014)	2	6,992	4,637	67.85% speed 32.15% red-light	99.96%
8	Darlinghurst - Craigend Street at McLachlan Avenue (August 2010)	1	4,705	4,611	63.57% speed 36.43% red-light	99.97%
9	West Pymble - Ryde Road at Lady Game Drive (December 2010)	1	6,155	4,569	98.29% speed 1.71% red-light	99.96%
10	Neutral Bay - Falcon Street at Merlin Street (July 2014)	1	5,170	3,724	24.68% speed 75.32% red-light	99.97%

C. NSW mobile speed cameras

C.1 The NSW Mobile Speed Camera Program

Mobile speed cameras work like fixed speed cameras, but are moved in vehicles from location to location. 7,000 hours of mobile speed enforcement are delivered per month, at 1,024 locations across NSW.

Mobile speed cameras are effective because they are unpredictable. Their operation creates a general deterrence against speeding and crash reduction across the whole network – not just at camera locations.

This report was prepared in 2021, using data up until the end of the 2019 calendar year. During the period of the review, the NSW Mobile speed camera program has operated as follows:

NSW Mobile Speed Camera Program				
Year	Number of vehicles	Number of locations	Number of hours/month	Policy
2010-11	6	142	930	Bi-directional enforcement
2012-16	45	640 <i>(by mid 2012)</i>	7,000 <i>(by mid-2014)</i>	Enhanced visibility (vehicles & signage), single direction enforced
2017-19	45	1,024	7,000	

C.2 Initial impact of the reintroduction of the program

The reintroduction of the mobile speed camera program resulted in an immediate reduction in the NSW road toll. In August 2011, the review of the NSW mobile speed camera program¹ found that in the first year of operation there was a 19 per cent statistically significant reduction ($p < 0.001$) in fatalities throughout NSW since the re-introduction of mobile speed cameras (chi-square test of independence at 0.05 probability level).

In the year before mobile speed cameras (19 July 2009 – 18 July 2010) there were 446 fatalities in NSW, whereas in the year after mobile speed cameras (19 July 2010 – 18 July 2011) there were 357 fatalities. This represents a saving of 89 lives and an estimated community saving of around \$575 million (based on willingness-to-pay methodology 2011).

C.3 Impact on the NSW Road toll in recent years

The ongoing impact of the mobile speed camera program has also impacted the road toll in recent years.

¹ NSW Centre for Road Safety (2011). NSW Mobile Speed Camera Review. NSW Centre for Road Safety.

C.3.1.1 NSW road fatalities

There were 353 fatalities on NSW roads in 2019. This was a slight increase on the 2018 figure (347) and was significantly below the 2009 figure of 453.

C.3.1.2 NSW fatality rate per 100,000 population

The NSW fatality rate per 100,000 population was 4.4 in 2019. This was a slight increase compared with the 2018 rate of 4.3, and significantly lower than the 2009 figure of 6.4.

C.3.1.3 Speed related fatalities and serious injuries

There were 136 fatalities from speed in 2019. This represents a 34 per cent reduction on 2009 figures (before the mobile speed camera program was reintroduced in NSW).

There were 1,062 serious injuries from speed related crashes in 2019. This represents a 15 per cent decrease on 2009 figures:

Figure C1: Speed-related fatalities and injuries, 2009-2019

Speed related fatalities and serious injuries have also fallen by a greater proportion than total fatalities, while total serious injuries, across NSW have increased, for the same period:

	2009	2019	% Change
NSW excessive speed fatalities	207	136	-34%
NSW total fatalities	453	353	-22%
NSW speed-related serious injuries	1,243	1,062	-15%
NSW total matched serious injuries	4,903	4,592	-6%

C.4 Annual speed survey

Data from the annual speed survey are presented overleaf, along with comparison data from 2009-2019.

Results are presented separately for light and heavy vehicles, and show:

- mean speed;
- 85th percentile speed (i.e. speed that 85 per cent of vehicles are below and 15 per cent of vehicles are exceeding);
- percentage exceeding the speed limit by up to 10 km/h; and
- percentage exceeding the speed limit by more than 10 km/h.

Vehicle speeds are assessed state-wide through annual speed surveys undertaken by the Centre for Road Safety at the same locations every year. These speed surveys are conducted across NSW on a range of roads with a range of speed limits to gather current information about speeding behaviour of both light vehicles and heavy vehicles.

In 2019 annual speed surveys were conducted at 166 locations across NSW. They were not undertaken at specific speed camera enforcement locations. The annual speed surveys measure free travel speeds, with a headway of four seconds. That is, only the speeds of vehicles that are unimpeded by other traffic are measured. Therefore the survey provides a measure of the speed that drivers choose to travel rather than a measure of traffic congestion.

Table C1: Mean speed and 85th percentile speed survey results, 2012-2019

Light vehicles:

Posted speed limit	Mean speeds (km/h)							85th percentile speeds (km/h)

^ Small samples may result in greater fluctuations year to year.

* Note HV Speed Limit is 100 km/h and results presented indicate the percentage of HVs exceeding 100 km/h in this section.

C.4.1.1 Results for default urban and rural speed zones

Light vehicles

In 2019, light vehicle speed survey results indicate:

- 50 km/h speed zones
 - 42.7 per cent of drivers were travelling up to 10 km/h above the posted speed limit, and a further 7.3 per cent were exceeding the speed limit by 10 km/h or more.
 - The 85th percentile speed was 55.8 km/h, the mean speed was 49.5 km/h.
- 100 km/h speed zones
 - 31.5 per cent of drivers were travelling up to 10 km/h above the posted speed limit, and a further 6.5 per cent were exceeding the speed limit by 10 km/h or more.
 - The 85th percentile speed was 102.3 km/h, the mean speed was 94.7 km/h.

Heavy vehicles

In 2019, heavy vehicle speed survey results indicate:

- 50 km/h speed zones
 - 42.2 per cent of drivers were travelling up to 10 km/h above the posted speed limit, and a further 6.5 per cent were exceeding the speed limit by 10 km/h or more.
 - The 85th percentile speed was 55.2 km/h, the mean speed was 49.1 km/h.
- 100 km/h speed zones
 - 24.7 per cent of drivers were travelling up to 10 km/h above the posted speed limit, and a further 3.1 per cent were exceeding the speed limit by 10 km/h or more.
 - The 85th percentile speed was 100.6 km/h, the mean speed was 94.3 km/h.

C.4.1.2 Trends in speed survey results

Light vehicles

Over the last ten years the general trend has been an increase in the proportion of light vehicles complying with the speed limit across all speed zones. This can be seen in Figure C2 (presented overleaf), along with:

- A significant increase in compliance in 2010, coinciding with the introduction of mobile speed cameras.
- 80 km/h zones have had the highest rate of compliance since 2012, with almost 80 per cent of drivers driving within the speed limit.
- 40 km/h school zones continue to have the lowest rate of compliance, with only approximately 40 per cent of drivers driving within the speed limit.

Figure C2: Annual speed survey results, light vehicle compliance rate (percentage of vehicles travelling within the speed limit) by speed zone

Heavy Vehicles

The speed survey results also indicate that there is a reduced proportion of heavy vehicles exceeding the speed limit over the last ten years.

Comparing the 2019 results against the 2018 results, there was no reduction in the mean of heavy vehicle speeding in 100 km/h zones, but a slight increase in 110 km/h zones.

C.5 Mobile speed camera infringements

In 2019 there were a total of 29,162 infringements issued from mobile speed camera enforcement resulting in \$5.9 million of fines. The cost of conducting the mobile speed camera program for 2019 was \$12.7 million.

The total number of mobile speed camera infringements issued in 2019 increased by 14 per cent compared to 2018.

The below graph shows the mobile speed camera program infringement data and the number of enforcement hours per month. This report is based on data up to the end of the 2019 calendar year. The graph shows that there was a marked decrease in the number of infringements issued from the end of June 2014 onwards. At that time, the number of enforcement hours reached 7,000 per month, and have not increased over and above that point (within the period of this report, up to end 2019). It can be seen that the number of monthly infringements has decreased since that time, as motorists have changed their behaviour at the locations where mobile speed cameras enforce.

Figure C3: Speeding infringements issued and number of enforcement hours conducted by mobile speed cameras by month

The above graph depicts some peaks in infringement numbers when new sites are in use more frequently. In the months following the use of new sites, the number of infringements decreased or stabilised. This trend is to be anticipated; for example fixed speed enforcement follows the same type of pattern, with the difference being that fixed speed cameras remain in the same place and continually enforce meaning that reductions in infringements are more consistent.

The reduction in infringements from the start of 2012 can be attributed to the enhanced visibility of mobile speed camera vehicles as well as additional signage being placed before a mobile speed camera to ensure drivers see and recognised the enforcement activity. At the same time, mobile speed cameras also switched from enforcing in both directions to single direction enforcement, further contributing to the lower volume of infringements.

C.6 Compliance at all mobile speed camera locations

Figure C4 below shows the compliance rate of vehicles at mobile speed camera locations. Compliance data compares the number of vehicles that pass a camera with the number of fines detected by the camera. As can be seen below, over 99 per cent of vehicles passing mobile cameras are not infringed for speeding. In 2019 the compliance rate was 99.9%. This high rate of compliance has remained consistent since 2010 when the program was reintroduced.

Figure C4: Compliance rate of vehicles at mobile speed camera locations

C.7 Supporting initiatives

CRS has developed and implemented a speed camera public education campaign that has supported the rollout of the mobile speed camera program.

Evidence shows that enforcement and strong public education campaigns change driver behaviour and help prevent speed-related crashes and trauma through awareness of enforcement.

C.8 Summary

Overall, the trend in road fatalities, infringements and annual speed survey data demonstrates that the mobile speed camera program has delivered road safety benefits over the years since the program was re-introduced in 2010.

D. NSW heavy vehicle average speed cameras

D.1 The NSW heavy vehicle average speed camera program

As at 31 December 2019, there were 25 average speed enforcement lengths across NSW. The median commencement date for NSW average speed enforcement lengths was 16 December 2011.

The program addresses heavy vehicle speeding along travel routes with a demonstrated history of heavy vehicle crashes and/or speeding. The program targets heavy vehicles because they are over-represented in crashes on known heavy vehicle routes and when they are involved in accidents they tend to be more serious due to their size and weight.

Average speed camera enforcement works by measuring the amount of time it takes a heavy vehicle to travel between two points and then calculating the speed of the vehicle. If the vehicle's average speed is faster than the speed limit for the length of road, the driver will be infringed for speeding.

D.2 NSW heavy vehicle average speed enforcement lengths

	Road	Section	Approximate Length (km)
1	Pacific Highway	Between Harwood and New Italy	35
2	Great Western Highway	Between Meadow Flat and Raglan	26
3	Federal Highway	Between Goulburn and Collector	20
4	Blackwall Drive	Between Woodburn and Wardell	18
5	Pacific Highway	Between Nabcac and Taree	17
6	Mitchell Highway	Between Molong and Cundumbul	28
7	Hume Highway	Between Coolac and Yass	72
8	Hume Highway	Between Gundagai and Coolac	16
9	Monaro Highway	Between Bredbo and Cooma	28
10	Gwydir Highway	Between Glen Innes and Inverell	57
11	Pacific Highway	Between Port Macquarie and Kempsey	36
12	Oxley Highway	Between Gunnedah and Tamworth	60
13	New England Highway	Between Muswellbrook and Aberdeen	7
14	Newell Highway	Between Peak Hill and Tomingley	10
15	Newell Highway	Between Eumungerie and Gilgandra	30
16	New England Highway	Between Muswellbrook and Singleton	36
17	Pacific Highway	Between Kew and Port Macquarie	15
18	Pacific Highway	Between Urunga and Valla	13
19	Picton Road	Between Wilton and Cataract	17
20	Golden Highway	Between Sandy Hollow to Merriwa	28
21	Newell Highway	Between Forbes and West Wyalong	94
22	Pacific Highway	Between Ballina and Wardell	16
23	Pacific Highway / Blackwall Drive	Between Tyndale and Harwood	21
24	Mount Ousley Road	Between Bulli and Gwynneville	15
25	Great Western Highway	Between Mount Victoria and Lithgow	15

D.3 Enforcement periods

These lengths were installed as follows:

Year	Lengths installed	
2010	2	(5 years of crash data is available for these lengths)
2011	14	
2012	4	
2013	1	
2014	3	
2015	1	(Less than 5 years of crash data is available for the lengths)
2016	0	
2017	0	
2018	0	
2019	0	
Total:	25	

Crash and infringement data for the average speed camera program are presented in Table D1 overleaf.

D.4 Crash Data

Overall, there has been a reduction in fatal crashes and casualty crashes involving a heavy vehicle on NSW average speed enforcement lengths since those lengths were installed, compared with the five year period prior to installation.

Across heavy vehicle average speed camera lengths, there has been a:

- 29 per cent reduction in casualty crashes involving a heavy vehicle
- 51 per cent reduction in fatalities from crashes involving heavy vehicles
- 18 per cent reduction in serious injuries from crashes involving heavy vehicles.

The reduction in fatalities and serious injuries represents a saving of \$174 million to the community.

The trauma reductions at camera locations compare to the following rates of change observed across NSW over the same period for crashes involving heavy vehicles:

- 18 per cent reduction in casualty crashes involving a heavy vehicle
- 15 per cent reduction in fatalities from crashes involving heavy vehicles
- 15 per cent increase in serious injuries from crashes involving heavy vehicles.

It should also be noted, alongside the crash data discussed above, that there has been a notable increase in heavy vehicle traffic volumes. Over the periods that average speed enforcement lengths have been reviewed within this report, there has been a 15 per cent increase in heavy vehicle volume across NSW.¹

Totals:								874	1,231	1,547	2,801	2,817	2,129	2,055	2,091

D.5 Infringement Data

A total of 2,091 speeding infringements, resulting in total fines of \$988,862 were issued at NSW heavy vehicle average speed enforcement lengths in 2019.

This represents an average of 84 infringements per length during the 2019 calendar year.

D.6 Summary

Overall, there has been a reduction in fatal crashes and casualty crashes involving a heavy vehicle on NSW average speed enforcement lengths since those lengths were installed, compared with the five year period prior to installation.

This represents a notable road safety improvement when compared to NSW heavy vehicle volumes, which have risen 15 per cent over the same period.²

NSW is currently expanding the heavy vehicle average speed camera program to metropolitan areas, and CRS will continue to monitor the program.

² Estimates for Vehicle Kilometres Travelled (VKT) estimated in *Yearbook 2020: Australian Infrastructure Statistics, Statistical Report, BITRE*
