

Arncliffe Station Platform Canopy Extension

More Trains, More Services

June and July 2023

Transport for NSW acknowledges the Gweagal, Bidjigal and Gadigal Clans as the Traditional Custodians of the lands on which we work and pay respects to Elders past and present.

Upcoming work

In June work will be restarting at Arncliffe Station in preparation for the resurfacing and paving work to be completed at the southern end of Platforms three and four.

When and where we'll be working

This work will take place from **6am Saturday 1 July to 7pm Sunday 2 July 2023**, during a scheduled Sydney Trains trackwork period when no trains will be running. Scheduling construction work outside standard construction hours enables our project team to complete essential activities safely. There will be signage directing people to alternative transport and for pedestrians to access the station concourse.

All work being completed will be on platforms three and four and includes:

- resurfacing sections of asphalt
- some paving on the platform
- some electrical work.

Some of this work may generate higher than normal noise levels. Any impacted residents will be contacted directly prior to the work occurring. All work is dependent on weather and site conditions and is subject to change.

What will this mean for you?

The commuter car park will be closed from **5pm Monday 26 June until 5pm Friday 7 July 2023** to allow for deliveries to facilitate this work. Signage will be installed to notify commuters.

From **Monday 3 July to Friday 14 July 2023**, due to the platform resurfacing work, tactiles will be temporarily removed from Platforms three and four and be replaced with a temporary visual yellow line. Once the new asphalt has cured, new permanent tactiles will be installed in this area.

Managing our impacts

We understand construction activities may cause disruption to our closest neighbours, and every effort will be made to minimise the impacts where possible, including:

- turning off equipment when not in use and using non-tonal reversing alarms to reduce potential noise impacts
- locating equipment as far away from residents and businesses as possible
- directing lighting away from residents
- conducting on-site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration and dust management.
