

Dapto Station improvements

More Trains, More Services and Transport Access Program

February until March 2023

Transport for NSW acknowledges the Traditional Owners and Custodians of the lands on which we work and pay respects to Elders past and present. We recognise and celebrate the diversity of Aboriginal peoples and their ongoing cultures and connections to the lands and waters of NSW.

More Trains, More Services

The More Trains, More Services program will simplify and modernise the rail network creating high capacity, turn up and go services for many customers.

The work we are completing at Dapto Station will support the introduction of the Mariyung fleet, a new fleet of intercity trains that will offer improved safety, accessibility and comfort for customers travelling on the T4 Illawarra Line.

As part of the program, we are extending platforms, upgrading infrastructure, and re-building the maintenance depot at Dapto Station.

For more information about the More Trains, More Services program, please visit the website.

Transport Access Program

The Transport Access Program is delivering accessible, modern, secure, and integrated transport infrastructure across the State.

As part of the program, we are upgrading the level crossing, pedestrian zone, installing a formal kiss-and-ride zone, widening Platform 1, regrading Platform 2 and upgrading the station bathrooms, waiting room, footpaths, kerbs and ramps.

For more information about the Transport Access Program work, please visit the website.

What work are we doing?

In the coming months we will be:

- carrying out overhead wiring and signalling work inside the rail corridor
- testing and commissioning electrical track circuits, signals, and automatic train protection infrastructure
- surveying all installed equipment
- removing office infrastructure and spoil stockpiles from our site compound adjacent to Station Street
- track tamping and welding activities
- platform and maintenance building finishing work
- installing handrails at the Bong Bong Road ramp and re-grading the ramp landing. Alternate access will be in place and sign posted
- relocating fencing and screens on the Platform 1 canopy, and completing installation of services on the platform
- upgrading the ramp and door to the Family Accessible Toilet. Temporary facilities will be available, and sign posted
- installing fittings and fixtures on the Platform 1 canopy during the scheduled Sydney Trains trackwork periods, when no trains will be running, and the station will be closed.

Standard construction hours

Standard construction hours on this project are between **7am and 6pm Monday to Friday and 8am and 1pm on Saturdays.**

Weekend work

Some work will take place outside of standard construction hours.

From 6pm Friday 3 March until 7am Monday 6 March we will be working outside of standard construction hours.

Why we work outside of standard construction hours

We schedule work outside of standard construction hours during Sydney Trains trackwork periods when no trains are running, minimising disruptions to commuter services and improving the safety of our construction team and customers.

What will this mean for you?

You may notice:

- workers and vehicles
- noise from machinery and equipment.

Postponed or cancelled work

Due to several factors associated with work in the rail corridor, there is always a possibility that some of our planned work may be postponed or cancelled. If you would like to be updated on cancelled work, please contact us through the formal avenues listed below.

Managing our impacts

We understand construction activities may cause disruption to our closest neighbours, so every effort will be made to minimise the impacts where possible, including:

- turning off equipment when not in use and using non-tonal reversing alarms to reduce potential noise impacts
- locating equipment as far away from residents and businesses as possible
- directing lighting away from residents
- conducting on-site monitoring to enable compliance with strict environmental conditions relating to noise, vibration and dust management.
