

Edmondson Park North Commuter Car Park

Commuter Car Park Program

July 2023

Transport for NSW acknowledges the Traditional Custodians of the land and pays respects to Elders past and present.

Construction is underway on the Edmondson Park North Commuter Car Park, which will provide approximately 900 new parking spaces. This will result in a net increase of over 700 additional parking spaces for transport customers when the existing car park to the north of the station is closed to the public.

What work are we doing?

The following activities are planned for July:

- Modifying the access road to the new commuter car park
- Internal fit out work including electrical and plumbing
- Installing structural steel and façade panels

When and where we'll be working

We'll be working within the site compound off Soldiers Parade, Edmondson Park.

Standard work hours are **7am to 6pm, Monday to Friday and 8am to 1pm, Saturday.**

The tower cranes are anticipated to be removed starting from July. This will involve the delivery of a mobile crane to assist with the removal outside of standard work hours due to being oversized.

What will this mean for you?

You may notice:

- Workers and vehicles
- Traffic controllers and signage along Soldiers Parade

- Noise from machinery and equipment, including excavators, rollers, road saws, graders, tipping trucks, concrete mixers, concrete pump trucks, service vehicles, various delivery vehicles, mobile cranes, tower cranes, forklifts, generators and hand tools

Managing our impacts

Our site has been designed to minimise impact to the community and environment. This includes:

- Fencing for safety and security
- Reducing our noise as much as possible
- Targeted lighting to minimise light spill
- Traffic control to help manage construction traffic entering and leaving our site

Sustainability Initiatives

Several sustainability initiatives have been implemented during construction to date. These include:

- Separating construction waste to assist in the resource recovery process
- Constructing elements such as retaining walls out of recycled concrete blocks
- Capturing rainwater for reuse on site to suppress dust
- Using a battery powered generator, which has replaced multiple diesel generators and significantly reduced emissions
