

More Trains, More Services

Kingsgrove to Beverly Hills Asset Rationalisation

What corridor work are we doing between Beverly Hills and Kingsgrove stations?

As part of work on the More Trains, More Services program, we are removing redundant track and infrastructure from the rail corridor between Beverly Hills and Kingsgrove stations. This work will facilitate improved movement and management of train services, and remove unnecessary maintenance costs.

The More Trains, More Services program aims to simplify and modernise the rail network so that customers can expect more frequent and reliable train services in the future.

What construction will be undertaken as part of this project?

Construction activities will include:

- removal, realignment and installation of new overhead wiring and signalling equipment so trains can operate safely and efficiently

- removal of approximately 200m of redundant track to declutter and simplify the network
- installation of modern infrastructure to support improved services

When will work start, and how long will it take?

Our activity between Beverly Hills and Kingsgrove will start in May 2021 is expected to take approximately 7 months to complete.

What's next?

Site investigation work will be begin shortly to further inform the technical design for this work. Site compounds will be established to store project materials and machinery, as indicated in the image above.

From **8pm Monday 3 until 5am Friday 7 May**, we will be working at night during a scheduled Sydney Train's track work period, while services are not running.

Standard construction hours

To support the construction industry through Coronavirus, the NSW Government have extended an amendment to the legislation regarding standard construction hours. This amendment enables activities across all our sites to be carried out between 7am and 6pm on weekdays, weekends and public holidays.

Working outside of standard construction hours

To maintain a high standard of safety and reliability across the transport network, Sydney Trains' carry out track work outside of peak times, mostly overnight or on weekends to minimise or avoid disruption to commuter services. Sections of the tracks are closed so our construction team can work safely and efficiently while fixing and upgrading the track and surrounding infrastructure.

We schedule the majority of our work outside of standard construction hours to coincide with Sydney Trains' track work periods, when no passenger services are running, and power isolations are in place.

Working during trackwork periods minimises disruptions to commuter services and improves the safety of our construction team and customers.

For up to date information about services during these times, please visit transportnsw.info or call 131 500.

About More Trains, More Services

Over the next ten years the More Trains, More Services program will simplify and modernise the rail network so that customers can expect more frequent train services, with less wait times, less crowding and more seats on a simpler, more reliable network.

Minimising impacts

The project team understands that construction activities may cause disruption for the community and every effort will be made to minimise impacts where possible, including:

- turning off equipment when not in use and using non-tonal reversing alarms to reduce potential noise impacts to the surrounding community
- locating equipment as far away from residents and businesses as possible
- stopping work at regular intervals to allow for respite periods
- directing lighting away from residents
- conducting on-site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration and dust management.
