

# More Trains, More Services

## T8 Power Supply Upgrade project

### What happened in September?

During September, we continued with preliminary site investigations in preparation for construction which will commence next year.

### What's planned next?

Throughout October, we will continue with the following activities:

- geotechnical, survey, potholing investigations between Chalmers Street and Mortuary Tunnel
- site investigation at Domestic and International stations.

Once complete, the project will provide the necessary power to support the increase in the number of trains operating along the T8 Airport line.

### How do we consider the community?

Standard construction hours on this project are **7am to 6pm** Monday to Friday, weekends and public holidays.

The project team understands construction activities may cause disruption for the community. Every effort will be made to minimise impacts where possible such as traffic control and signage for vehicles and cyclists travelling near site investigation locations. We will also ensure we adhere to strict environmental conditions relating to noise, vibration and dust management.

### Where will work take place?

The above map shows the project area for this project, including the Gibbons Street site access point.

### Will there be out of hours work?

Some out of hours work may be required to complete the site investigations. The community will be notified seven days in advance of night work being carried out. Night work would proceed depending on weather and site conditions, and is subject to change

### How are we staying safe?

We continue to deliver projects across NSW while ensuring the safety of all staff and the community. In line with current Australian Government guidelines around slowing the spread of Coronavirus and social distancing, all work will be carried out at a safe physical distance where possible and necessary hygiene practices will be observed.

## About More Trains, More Services

Over the next ten years the More Trains, More Services program will simplify and modernise the rail network so that customers can expect more frequent train services, with less wait times, less crowding and more seats on a simple, more reliable network.
