1.0 Introduction

Transport for NSW (TfNSW) proposes to upgrade the Old Narrandera Road and Travers Street intersections at the Olympic Highway in Wagga Wagga, NSW. The proposal is shown in **Figure 1.1** for the Old Narrandera Road (ONR) intersection and **Figure 1.2** for the Travers Street intersection.

This report provides an assessment of the potential noise and vibration impacts associated with the construction of the proposal and the change in operational road traffic noise impacts.

A description of the concept design is provided in the Review of Environmental Factors (REF) and detailed concept design plans are included in the REF. The concept design may be further refined during the detailed design phase. The key features for the proposal are summarised in **Table 1.1**.

Table 1.1 Key features

Key Features
Old Narrandera Road Intersection
• Building a second right turn lane for traffic exiting Old Narrandera Road onto the Olympic Highway • Extending the current Boorooma Street ramp to form a second southbound through lane on the Olympic Highway, merging south of the intersection • Retaining the current right-turn lane from the Olympic Highway into Old Narrandera Road • Retaining the current left-turn slip lane from the Olympic Highway into Old Narrandera Road • Installation of traffic lights at the intersection of Old Narrandera Road and the Olympic Highway, and associated utility connections • Construction of a second northbound through lane on the Olympic Highway from Old Narrandera Road to Boorooma Street exit. • Property acquisition (up to 1.4 hectares (ha)) in the south-western corner of the intersection • Extension of existing culverts under the Olympic Highway and Old Narrandera Road • Potential changes to the existing road cutting south of the intersection to allow for a second northbound lane. This may include cutting into the road cutting and constructing retaining walls. • Native vegetation removal (up to 10.06 ha), including the removal of up to 0.61 ha of a threatened ecological community and 26 hollow-bearing trees (HBTs) • General construction activities, including embankment widening, excavation and adjustments to existing cut batters, drainage works, scour protection works, street lighting, construction access tracks, medians, possible noise wall construction, and relocation of existing utilities such as street lights and electricity poles/lines. • Construction access tracks will be retained permanently to provide future safe access for inspection and maintenance of the road, traffic signals and utilities

Key Features
Travers Street Intersection
• Relocating the intersection about 80 metres (m) south of the existing roundabout to allow for two southbound lanes on the Olympic Highway • Building about 200 m of new road as a realignment of Travers Street • Installing traffic lights at the new intersection and associated utility connections • Reconfiguring Olympic Highway lanes at the new intersection to include turning lanes into Travers Street • Changes to the Moorong Street northern connection onto the Olympic Highway to create a left-in left-out arrangement • Building of a northbound right turning lane into Travers Street • Changes to Olympic Highway northbound lanes south of the Travers Street intersection, with traffic to merge into a single lane before the intersection and new right turning lane • Native vegetation removal (up to 1.42 ha), including removal of seven HBTs • Removing the roundabout and existing Travers Street connection to the Olympic Highway. Part of this road may be retained to provide access to the Wiradjuri walking track • Extending the horse underpass culvert at the Olympic Highway, increase the headwall and wingwall height and installation of traffic barriers • Changes to the horse pathway both sides of the Olympic Highway horse underpass culvert, including relocation of the pathway and the installation of fencing or similar to control the risk of horses bolting • Providing driveway access and parking on the old Travers St road pavement for the Wiradjuri Walking Track • Potential temporary relocation and/or widening of the Wiradjuri Walking Track under the Gobbagombalin Bridge • General construction activities including changes to the existing roundabout pavement levels and medians, noise treatment work, construction access tracks, temporary relocation of fencing, temporary relocation of existing shared user path and relocating existing utilities such as street lights and electricity poles/lines.

Ancillary facilities would be established to support the proposal at both intersections, including site compounds, stockpile areas, parking areas and temporary fencing. Several possible ancillary sites have been identified by Transport. The ancillary sites used as part of the proposal would be selected by the construction contractor during the delivery phase. Separate ancillary sites are expected to be used for work carried out at each intersection. For the purposes of the REF, all potential ancillary sites have been assessed to help inform site selection and minimise the potential environmental impacts of the proposal.

The proposed work is scheduled to start in late 2022/early 2023. The construction period for the proposal would likely be staged, although this would be confirmed by the construction contractor during delivery. Work on each intersection are expected to occur concurrently. The total construction time for both intersections to be completed concurrently is expected to be up to 12 months.

2.0 Assessment Methodology

This noise and vibration impact assessment (NVIA) has been prepared in accordance with the following guidelines and legislative requirements:

- NSW Road Noise Policy, Department of Environment, Climate Change and Water, 2011 (RNP, DECCW)
- Interim Construction Noise Guideline NSW Department of Environment and Climate Change, 2009 (ICNG, DECC)
- Procedure – Preparing an Operational Traffic and Construction Noise and Vibration Assessment Report, v 1.6, Roads and Maritime, 2016 (The Procedure)
- Noise Criteria Guideline, Roads and Maritime, 2015 (NCG)
- Noise Mitigation Guideline, Roads and Maritime, 2015 (NMG)
- Noise Model Validation Guideline, Roads and Maritime, 2018 (NMVG)
- Construction Noise and Vibration Guideline, Roads and Maritime, v 1.0, 2016 (CNVG)
- Noise Policy for Industry, Environment Protection Authority, 2017 (NPfI, EPA).

Prediction of the operational road traffic noise levels was undertaken with the proprietary computer noise modelling software SoundPLAN version 8.2, using the Calculation of Road Traffic Noise (CoRTN) calculation method.

The operational noise model was constructed using 3-Dimensional terrain comprised of 3-Dimensional (3-D) survey drawings, 2-Dimensional (2-D) concept design and the existing ground surface from LIDAR survey.

Construction noise impacts were predicted using computer noise modelling with SoundPLAN version 8.2. The construction noise scenarios were modelled based on noise source emissions for road construction plant and equipment given in the Roads and Maritime Construction Noise Estimator Tool (revision 4 August 2016).

3.0 Existing Ambient Noise Environment

The proposal area in the vicinity of the works consists primarily of residential housing, rural residential land and commercial/industrial premises as shown in **Figure 3.1** and **Figure 3.2**. Noise catchment areas (NCAs) have been identified in the vicinity of the works for the purposes of assessing operational and construction noise impacts, as shown in **Figure 3.3** and **Figure 3.4**.

3.1 Measured existing noise levels

Existing noise levels were measured at a single location within the proposal area to quantify the levels of existing road traffic noise and to establish background noise levels. The results of the noise monitoring are summarised in **Table 3.1**. The noise monitoring results are presented in **Appendix A**.

Noise levels were measured in accordance with *AS AS2702-1984 Acoustics – Methods for the measurement of road traffic noise*. Simultaneous traffic counts were measured for the duration of the noise monitoring from 26 February 2021 to 04 March 2021.

The microphone at the monitoring location had line-of-sight to vehicles on the Olympic Highway and was positioned approximately 45 m from the nearest lane edge. There is an intervening gully between the monitoring location and the built-up road embankment.

Meteorological data was obtained from the Bureau of Meteorology (BoM) Automatic Weather Station at Wagga Wagga Airport, and periods of unsuitable weather conditions (high wind conditions or rainfall) were excluded from the noise monitoring data. The BOM measured windspeeds were adjusted from 10 m height to 3 m height using the method nominated by Gowan et al. (2004), to more appropriately reflect windspeed at the microphone height. Rainfall was not measured during the logging period. Additional filtering of the raw data was also undertaken to remove extraneous noise including dog barking. The results of this filtering are demonstrated in Figures A1.11-A1.14 within **Appendix A**.

Table 3.1 Noise Monitoring Results

Location	$L_{Aeq(15\ hour)}$ RNP Day 7 am - 10 pm	$L_{Aeq(9\ hour)}$ RNP Night 10 pm -7 am	RBL CNVG Day 7 am - 6 pm	RBL CNVG Eve 6 pm - 10 pm	RBL CNVG Night 10 pm - 7 am
23 Sunvale Crescent, Estella (backyard)	54.9	49.9	45.6	46.9	30.6

3.2 Local noise environment

The measured background noise levels presented in **Table 3.1** would be representative of the background noise levels within 100m corridor of the Olympic Highway, due to the dominance of road traffic noise.

For the Old Narrandera Road intersection, there is a mixture of R1, RU1 and R5 land use zones in the area surrounding the Proposal site including the Ancillary sites. Based on the NPfI the R1 area would fall within the Urban Residential category, the RU1 and R5 zones fall within a Rural Residential receiver category.

For the Travers Street intersection, there is a mixture of R1, B1, R3, RU1 and R5 land use zones in the area surrounding the Proposal site including the Ancillary sites. Based on the NPfI the R1 and B1 areas fall within the Urban Residential category, the R3, RU1 and R5 zones fall within a Rural Residential receiver category.

The adopted background noise levels for the noise catchment areas within this assessment are presented in **Table 3.2**.

Table 3.2 Noise Catchment Areas and Adopted Background Noise Levels, dB(A)

Intersection	Noise Catchment Area	Adopted RBLs, dB(A)		
		Day 7 am - 6 pm	Evening 6 pm - 10 pm	Night 10 pm - 7 am
Old Narrandera Road Intersection	ONR-NCA1 - Road corridor	46	46 (47)[1]	31
	ONR-NCA2 - Urban Residential	45	40	31 (35)[2]
	ONR-NCA3 - Rural Residential	40	35	30
Travers Street Intersection	T-NCA1 - Road corridor	46	46 (47)[1]	31
	T-NCA2 - Urban Residential	45	40	35
	T-NCA3 - Rural Residential	40	35	30

Notes: [1] Values shown in brackets represent the measured RBLs, however, as they are greater than the day period RBL the day period RBLs have been adopted in accordance with the NPfI, where the evening and night periods cannot be greater than the day period.
[2] The measured RBL was adopted as representative of the local area, rather than the nominated receiver category RBL shown in brackets.

4.0 Operational Noise Assessment

4.1 Noise Criteria

The noise criteria applicable to the proposal are given in the NCG. As the proposal outcome is primarily to improve safety, the changes to the road alignment are only minor and the proposal does not seek to increase the traffic carrying capacity for the road, therefore the operational noise has been assessed under the minor works criteria as described in the NCG. The assessment guideline for minor works in the NCG is the existing noise criteria in the Road Noise Policy (RNP), which is that the works should not increase noise levels by more than 2.0 dB(A) relative to the existing noise levels at the worst affected receiver. Receivers in the NCG are defined to include residences, schools, childcare centres, places of worship and health care institutions.

4.2 Triggers for qualifying a receiver for consideration of noise mitigation

The trigger that qualifies a receiver for consideration of noise mitigation is whether the works will result in an increase of road traffic noise greater than 2.0 dB(A). This trigger is considered to be applicable for receivers of all types of land use.

4.3 Operational noise assessment

4.3.1 Modelling methodology

Prediction of the operational road traffic noise levels was undertaken with the proprietary computer noise modelling software SoundPLAN version 8.2, using the Calculation of Road Traffic Noise (CoRTN) calculation method (NSW modified version).

The operational noise model was constructed using 3-Dimensional terrain data comprised of 3-Dimensional survey drawings, 2-Dimensional concept design and the existing ground surface from LIDAR survey. Receiver buildings were constructed in the model based on building outlines identified from orthorectified aerial photography and receiver (window) heights were assumed to be 1.8 m above ground level. Ground absorption was modelled as 50% absorptive for non-road surfaces, and reflective for road surfaces.

4.3.2 Traffic Modelling Parameters

Existing traffic counts collected simultaneously with the noise monitoring are presented in **Appendix B**. Forecast traffic volumes used in the noise modelling were provided by Roads and Maritime. The traffic volumes used in the modelling are shown in **Appendix C** and summarised in **Table 4.1** and **Table 4.2**. Road pavements were assumed to be dense graded asphalt (DGA) and speeds were modelled as the posted speed limits of 80 km/h for the Olympic Highway and 70 km/h for Old Narrandera Road and 60 km/h for Travers Street. This proposal does not seek to increase the traffic carrying capacity for the road and therefore there is no difference between the traffic volumes for the no-build and build cases.

Table 4.1 Forecast traffic volumes used in noise modelling – Old Narrandera Road Intersection

Note: [1]Old Narrandera Road intersection southern approach volumes adopted as the North approach volumes for the Travers Street Intersection.

4.3.3 Model Validation

The noise model was validated by comparing the measured existing road traffic noise levels in the proposal area against the predicted road traffic noise levels that were modelled using the existing road terrain and the traffic volumes that were measured on site simultaneously with the noise monitoring for the weekday period. The comparison between the measured and modelled noise levels is shown in **Table 4.3**.

Table 4.3 Model Validation Results

Location	Day – LAeq(15 hour)			Night – LAeq(9 hour)			Difference Day-Night	
	Measured	Modelled	Diff.	Measured	Modelled	Diff.	Measured	Modelled
23 Sunvalue Crescent, Estella	55.6	62.5	6.9	50.4	55.4	5.0	5.2	7.1

As shown in **Table 4.3**, the noise model was found to be over-predicting at the noise monitoring location during both day and night time periods. The differences between measured and modelled values are expected to be primarily due to the height difference between the road embankment and monitoring location. The microphone had direct line-of-sight to the road as the road is elevated on an embankment and there is an intervening gully between the road edge and the monitoring location. However, the microphone height was less than a meter above the level of the road surface. A local 1.9 m sheetmetal fence in the intervening gully parallel to the road has also been incorporated within the noise model, however, it has limited influence on the noise predictions. The over-prediction of the validation model can be attributed to the terrain cross-section between the road and the monitoring location, and the ability of CoRTN to evaluate the attenuation over this unique cross-section. It is likely the noise model overpredicts the contribution of the tyre noise reported at the monitoring location. This is considered to be a localised issue and only occurring at the monitoring location due to the relationship between the elevation of the road surface and the elevation of the microphone. As a result, the camber of the road and condition of the verge become critical components in the propagation of tyre noise to the microphone location. This overprediction is unlikely to be reflected at the location of the buildings of the nearest sensitive receivers. As a result, this assessment is based on the modelled predictions without the inclusion of calibration factors. In this instance, any over-prediction will lead to a conservative outcome.

4.3.4 Predicted Noise Levels

As described in **Section 4.1**, the proposed upgrades to the Old Narrandera Road and Travers Street intersections are considered minor works. Due to the minor changes in road alignment resulting from the proposed upgrades, the potential noise impacts have been assessed at the sensitive receivers which are nearest to the construction footprint of each intersection. The predicted noise levels at these sensitive receivers are shown in **Appendix D**.

The change in the noise levels comparing the no-build and build cases are presented graphically in **Figure 4.1** to **Figure 4.8**.

In relation to the Old Narrandera Road intersection upgrade, **Figure 4.1** and **Figure 4.2** present the difference map the year 2024 for the $L_{Aeq(15\ hour)}$ (day) and $L_{Aeq(9\ hour)}$ (night) periods respectively. **Figure 4.3** and **Figure 4.4** present the difference map for the year 2034 for the $L_{Aeq(15\ hour)}$ (day) and $L_{Aeq(9\ hour)}$ (night) periods respectively.

In relation to the Travers Street intersection upgrade **Figure 4.5** and **Figure 4.6** present the difference map the year 2024 for the $L_{Aeq(15\ hour)}$ (day) and $L_{Aeq(9\ hour)}$ (night) periods respectively. **Figure 4.7** and **Figure 4.8** present the difference map for the year 2034 for the $L_{Aeq(15\ hour)}$ (day) and $L_{Aeq(9\ hour)}$ (night) periods respectively.

The difference map contours demonstrate that the forecast change in the predicted noise levels is very minor and generally less than 1 dB(A) in the areas with sensitive receivers.

As shown graphically in **Figure 4.1** to **Figure 4.8** and in the tabulated results presented in **Appendix D**, the proposal is not expected to result in an increase of road traffic noise of more than 2.0 dB(A) at any receiver. As the changes in road alignment are only minor at each intersection, the minor works noise criteria have been applied and therefore the proposal will not require the inclusion of operational noise mitigation measures.

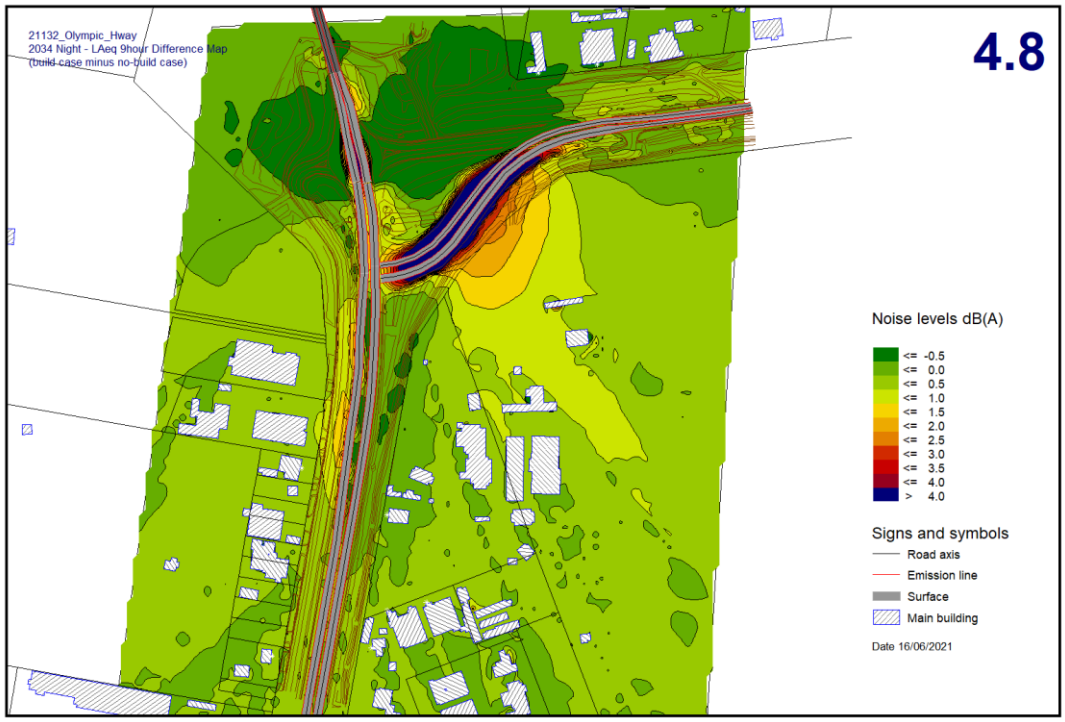

Figure 4.8 2034 Night – $L_{Aeq(9\ hour)}$ noise level difference map (build case minus no-build case) – Travers Street Intersection

4.4 Maximum Noise Level Assessment

An assessment has been undertaken to consider the potential for an increase in maximum noise levels during the night-time period from heavy vehicle movements on the Olympic Highway as a result of the introduction of the proposed signalised intersections.

The proposed Old Narrandera Road intersection upgrade involves the introduction of the signalised intersection. The introduction of the signalised intersection at Old Narrandera Road has the potential to increase the occurrence of maximum noise events from heavy vehicles due to acceleration or deceleration of the vehicles approaching or leaving the intersection.

The proposed Travers Street intersection upgrade is to replace an existing roundabout. At the existing Travers Street intersection, heavy vehicles would already accelerate or decelerate from the existing intersection due to the presence of the roundabout. On that basis, it is anticipated that there would be no increase in the occurrence of maximum noise events with the inclusion of the proposed signalised intersection at Travers Street. Therefore no further assessment consideration has been applied to the assessment of maximum noise events from the proposed Travers Street intersection.

The RNP does not provide prescriptive noise limits for the assessment of maximum noise levels, however, the Practice Note 3 from the RTA Environmental Noise Management Manual (ENMM) provides guidance for the assessment of maximum noise levels during the night-time period. This assessment protocol represents a guide to evaluate the potential for changes in maximum noise levels due to the project.

For roads with intermittent traffic flows a maximum noise event is considered to be an event where the L_{Amax} is 15 dB(A) above the $L_{Aeq(1\ hour)}$. The high-resolution noise monitoring results have been analysed to evaluate the potential occurrence of maximum noise level events and is summarised in **Table 4.4**. The analysis has also investigated the number of events where the L_{Amax} is greater than or equal to 65 dB(A).

Table 4.4 Occurrence of maximum noise level events during each night period (10 pm – 7 am) – Old Narrandera Road Intersection

Date	Event Count	
	LAmax – LAeq(1 hour) >= 15 dB(A)[1]	LAmax – LAeq(1hour) >= 15 dB(A) and LAmax >= 65dB(A)
26/02/2021	22	14
27/02/2021	26	18
28/02/2021	22	13
01/03/2021	17	13
02/03/2021	33	18
03/03/2021	42	24
04/03/2021	35	23
Average per night period	**29**	**18**
Average per night hour	**4**	**2**

Note: [1]Events where LAmax greater than 50 dB(A).

The existing heavy vehicle movements are summarised within the classified traffic count information presented in **Appendix B**. The total heavy vehicle and large vehicle counts are summarised in **Table 4.5**. The hourly distribution of the maximum noise events and heavy vehicle traffic counts is presented in **Figure 4.9**

Table 4.5 Existing heavy vehicle traffic volumes during each night period (10 pm – 7 am) – Old Narrandera Road Intersection

Date	Northbound		Southbound		Combined	
	HV	Large[1]	HV	Large[1]	HV	Large[1]
26/02/2021	39	18	39	21	78	39

02/03/2021	25	9	36	15	61	24
03/03/2021	43	24	40	22	83	46
04/03/2021	39	23	45	23	84	46
Average per night period	**32**	**16**	**30**	**15**	**62**	**31**
Average per night hour	**4**	**2**	**4**	**2**	**8**	**4**

Note: [1]Large vehicle count represents Class 6 and above.

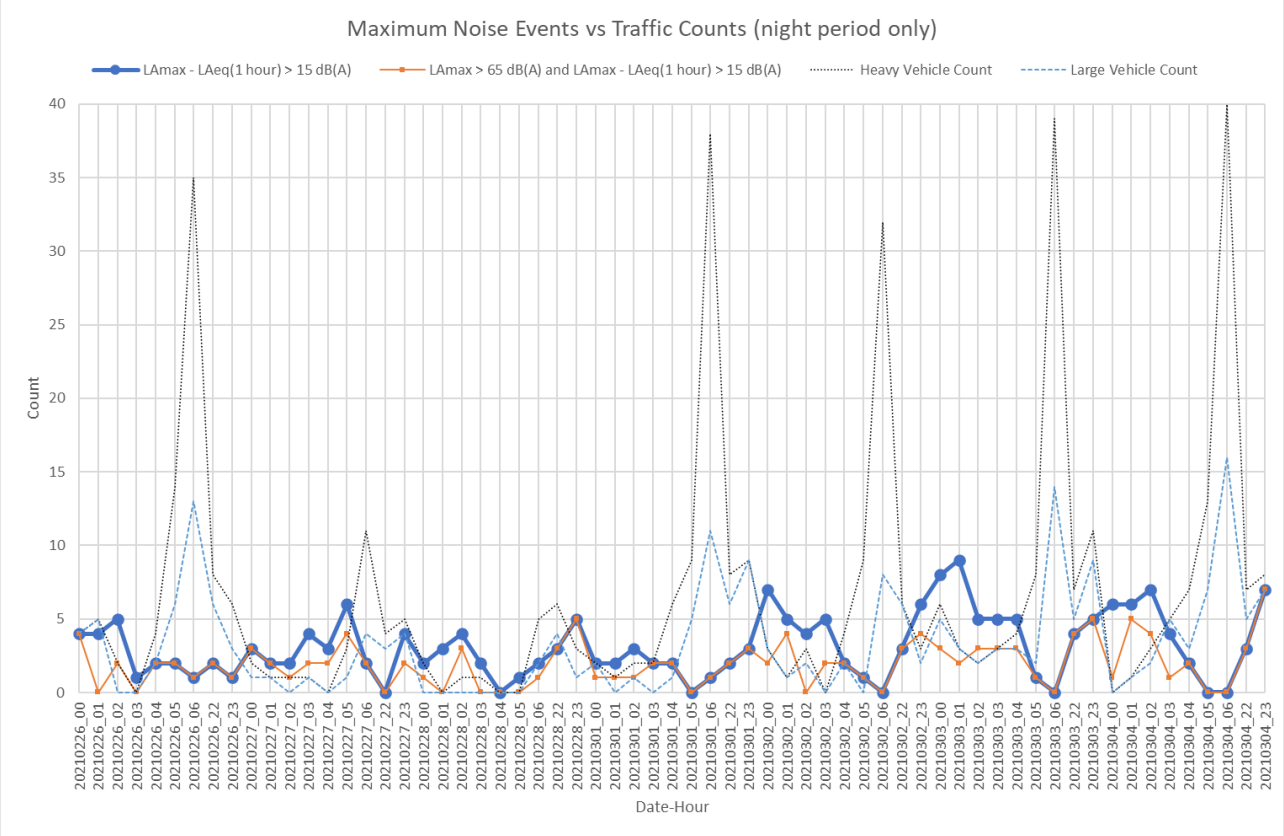

Figure 4.9 Distribution of hourly maximum noise level events and hourly heavy vehicle traffic counts (night period only)

Figure 4.9 indicates the maximum noise events identified in the collated noise monitoring data and traffic count data for the existing situation correlate reasonably well with the heavy vehicle passby events during the night period.

The traffic counts represent 4.2% of the average night period (10 pm - 7 am) traffic volumes for the existing case. The forecast traffic volumes for design years 2024 and 2034 are presented in **Table 4.1** for the Old Narrandera Road intersection. The forecast heavy vehicle volume during the night period is 329, therefore the average hourly forecast volume during the night period is 37. Using the 50% ratio of heavy vehicle to large vehicle as derived from the results presented in **Table 4.5** indicates that on average 19 large vehicles are anticipated per hour.

This analysis of the forecast traffic volumes indicates that there is potential for 19 maximum noise levels events per hour involving large vehicles (i.e. semi-trailers). A proportion of these vehicle movements would be influenced by the signalised intersection at Old Narrandera Road which may give rise to maximum noise level events associated with deceleration involving engine compression braking or acceleration from a stationary position.

To understand the potential envelope of maximum noise level events from large vehicle passbys, truck passby events have been incorporated within the operational noise model. The ISO 9613 noise level predictions algorithms have been adopted for these calculations. The passby noise sources have been modelled as industrial line sources at an elevation of 3.5 m above the road level. These noise sources have been modelled on both the northbound and southbound lanes of the Olympic Highway and for a length of approximately 450 m on either side of the Old Narrandera Road intersection.

Indicative source noise level data for truck passby events has been obtained from Umwelt's noise source library and are as follows:

- A decelerating semi-trailer passby with engine compression braking: 114 dB(A) L_{Amax}.
- An accelerating semi-trailer passby: 111 dB(A) L_{Amax}.

The predicted L_{Amax} noise levels are presented in **Figure 4.10**. The predicted difference between the passby L_{Amax} noise levels and the $L_{Aeq(1\ hour)}$ are presented in **Figure 4.11**.

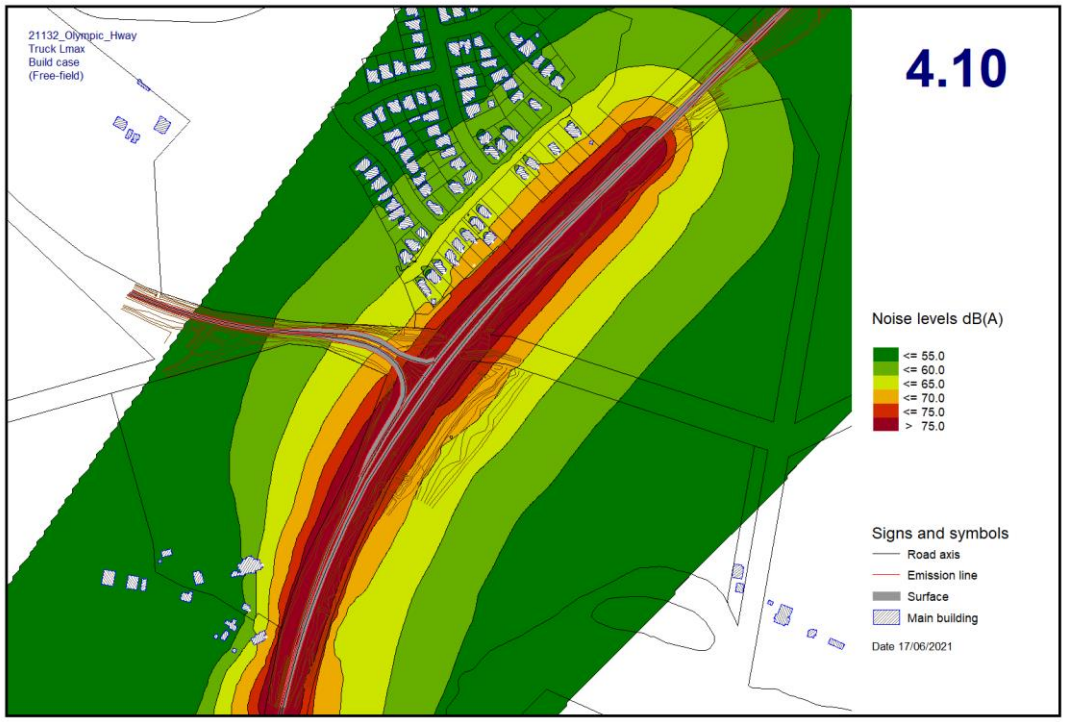

Figure 4.10 Predicted L_{Amax} noise level from accelerating or decelerating truck passby

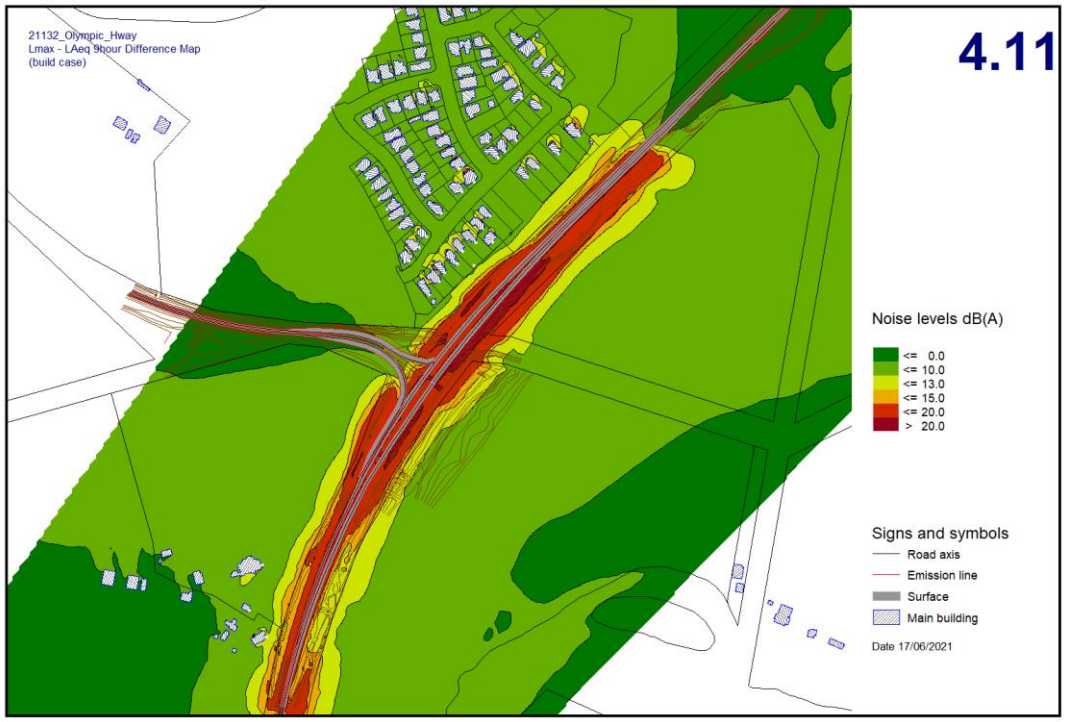

Figure 4.11 Noise level difference map truck passby L_{Amax} minus $L_{Aeq(1\ hour)}$ noise level

Figure 4.10 indicates that the predicted L_{Amax} noise levels are in the range of 65 dB(A) to 70 dB(A) at the nearest houses adjacent the road corridor. **Figure 4.11** indicates that the difference between the L_{Amax} truck passby noise levels and the $L_{Aeq(1\ hour)}$ noise levels is in the range of 5 dB(A) to 10 dB(A). Therefore the L_{Amax} noise level is predicted to be less than the maximum noise event threshold of 15 dB(A).

The preceding analysis is summarised as follows:

1. The collated noise monitoring and traffic counts indicate that the maximum noise event for the existing situation reasonably correlate with the heavy vehicle passby events during the night period.

2. The forecast traffic volumes for the design year of 2034 indicate a small increase in the number of heavy vehicle passby events during the night period.

3. The predicted noise levels from the passby events generally indicate that the difference between the passby event and the average night period traffic noise levels is in the order of 5 to 10 dB(A) at the nearest sensitive receivers.

On this basis, while there is a forecast increase in the potential occurrence of these maximum events due to a forecast increase in heavy vehicle passbys and the addition of the signalised intersection, the envelope of potential noise impact for maximum noise events is largely constrained to within the road corridor.

5.0 Construction Noise and Vibration Assessment

5.1 Construction methodology

Construction work would generally be carried out during daytime hours whenever practicable.

The hours of daytime construction would be between 7 am and 6 pm Monday through Friday and between 8 am and 1 pm Saturday. Work is not proposed to be undertaken on Sunday or public holidays.

It would be necessary to undertake out of hours work or night works to minimise disruption to traffic flows and facilitate worker safety. All night works would be undertaken in accordance with the Roads and Maritime's CNVG. Night works may include deliveries and intersection upgrade works as well as utility adjustments, tie-ins and asphalt paving.

5.2 Construction hours

The proposed work is scheduled to start in late 2022 / early 2023. The construction period for the proposal would likely be staged, although this would be confirmed by the construction contractor during delivery. The total construction time for both intersections is expected to be up to ten months.

Out of hours work would likely be needed as Transport for NSW curfew requirements for the Olympic Highway do not allow construction work to impact traffic flow between 7 am and 9:30 am and 3:30 pm and 6:30 pm. Out of hours work would be subject to permitted road occupancy licences (ROLs) and construction staging, and would be carried out in line with procedures contained within the Interim *Construction Noise Guideline 2009* (ICNG, DECC).

The nearby residents would be notified prior to the commencement of construction regarding work hours, and any planned construction work that is proposed to be carried out outside standard construction hours.

Any construction activities to be undertaken during standard construction hours will be undertaken in accordance with the ICNG as follows:

- Monday to Friday: 7 am – 6 pm
- Saturday: 8 am – 1 pm
- Sunday and public holidays: No work.

5.3 Construction equipment

A range of plant and equipment would be used during construction. The final equipment and plant requirements would be determined by the construction contractor. An indicative list of equipment and plant is provided below:

- front end loaders
- excavators
- road trucks
- mobile cranes and Franna cranes
- concrete trucks and concrete pumps
- road profilers

- dump trucks
- road sweepers
- graders
- back-hoes
- loaders
- asphalt shuttle buggy
- asphalt milling machine
- bitumen-sprayer trucks
- elevated work platforms (EWPs) or cherry pickers
- line-marking plant
- vibrating compactors
- light vehicles
- bulldozer
- road stabilisers
- trenching plant
- rollers
- water trucks
- asphalt/concrete pavers
- survey equipment
- generators
- air compressors
- vacuum trucks
- concrete saws
- pneumatic, electric and hydraulic hand tools
- manual hand tools

The CNET provides sound power levels for typical construction noise sources associated with typical construction activities that would usually be expected to occur on most road construction projects. The plant/equipment noise emissions according to the CNET are listed in **Table 5.1**.

Table 5.1 Noise emissions of proposed plant/equipment

Plant/equipment	Sound Pressure Levels LAeq(15 min) at 7m dB(A)
Asphalt truck & sprayer	78
Backhoe	86
Bulldozer	91
Chainsaw 4-5hp	89
Compactor	81
Concrete truck	84
Concrete saw	93
Daymakers	73
Dump truck	85
Excavator (tracked) 35t	85
Front end loader 23t	87
Grader	88
Hand Power Tool	80
Jackhammer	90
Light vehicles (eg 4WD)	78
Line marking truck	83
Mobile crane	88
Pavement laying machine	89
Pavement profiler	92
Power generator	78

Plant/equipment	Sound Pressure Levels LAeq(15 min) at 7m dB(A)
Road truck	83
Vibratory roller	84
Water cart	82

5.4 Construction activities

For the purposes of this assessment, three indicative construction scenarios have been modelled. Each scenario is described in **Table 5.2**. Detailed construction methodologies would be determined following finalisation of the detailed design and construction planning. The construction footprint and proposed ancillary sites for the Old Narrandera Road intersection upgrade are presented in **Figure 1.1**. The construction footprint and proposed ancillary sites for the Travers Street intersection upgrade are presented in **Figure 1.2**.

Scenarios 1 and 3 have been modelled within the construction footprint for each intersection. Scenario 2 has been modelled within each proposed ancillary site.

Table 5.2 Indicative Construction Scenarios, Equipment, Quantities and Sound Pressure Levels

Construction Scenario	Activity description	Potential work period	Equipment	Quantity	Sound Pressure Levels $L_{Aeq(15\ min)}$ at 7m dB(A)/ unit	Combined Sound Power Level	
						$L_{Aeq(15\ min)}$	L_{Amax1}
Sc.1	Corridor clearing	Standard hours	Excavator (tracked) 35t	1	85	116	119

			Roller	1	84		
			Grader/asphalt paver	1	88		

Note: [1] LAmax is assumed to be 3 dB greater than the LAeq of the combined energy of all equipment operated simultaneously.

5.5 Construction noise assessment

5.5.1 Criteria

Assessment levels for noise from construction activities, excluding noise from construction-related traffic on public roads, are defined in the ICNG.

The adopted Rating Background Levels for the receivers surrounding the proposal area have been adopted from the measured existing noise levels presented in **Table 3.2**.

Table 5.3 presents the ICNG construction noise assessment levels for representative receivers surrounding the proposal area. The assessment levels are intended to guide the need for and the selection of feasible and reasonable work practices to minimise construction noise impacts.

Table 5.3 ICNG Construction Noise Management Levels, dB(A)

Land use	Construction time	Noise Management Level $L_{Aeq(15\ min)}$
Residential	Recommended standard hours	RBL + 10 dB(A)
	Outside recommended standard hours	RBL + 5 dB(A)
Classrooms at schools and other educational institutions	Applicable when the property is in use	Internal noise level 45 dB(A)
Industrial buildings	Applicable when the property is in use	External 75 dB(A)
Offices, retail outlets	Applicable when the property is in use	External 70 dB(A)

Time periods are defined in the CNVG (Roads and Maritime, 2016) for different types of construction activities and for standard recommended construction hours and out-of-hours works (OOHW) as shown in **Table 5.4**.

Table 5.4 Construction hours as defined in CNVG

Time Period	Construction hours	Monday - Friday	Saturday	Sunday/Public Holiday
Day	Standard construction hours	7 am – 6 pm	8 am – 1 pm	No work
Evening	OOHW Period 1	6 pm – 10 pm	7 am – 8 am and 10 pm – 8 am	8 am – 6 pm
Night	OOHW Period 2	10 pm – 7 am	10 pm – 8 am	6 pm – 7 am
Construction Activities with impulsive or tonal noise emissions		8 am – 5 pm[1]	9 am – 1 pm[1]	No work
Blasting		9 am – 5 pm	9 am – 1 pm	No blasting

Notes: [1] Works may be carried out in continuous blocks not exceeding three hours each with a minimum respite from those activities and works of not less than one hour between each block. 'Continuous' includes any period during which there is less than a one hour respite between ceasing and recommencing any of the work the subject of this condition.

The Construction Noise Management Levels for the different receivers and different time periods based on the adopted RBLs (refer to **Table 3.2**) are summarised in **Table 5.5**. The criterion for sleep disturbance is given in CNVG Appendix E.

Table 5.5 Proposed Construction Noise Management Levels, dB(A)

Noise Catchment Area	Noise Management level (NML) $L_{Aeq(15\ min)}$					
	Standard hours of Construction[1]	Highly Noise Affected[1]	Day (OOHW)	Evening (OOHW Period 1)	Night (OOHW Period 2)	Sleep Disturbance Level (L_{Amax}) Night Only[2]
ONR-NCA1	56	75	51	51	36	65
ONR-NCA2	55	75	50	45	36	65
ONR-NCA3	50	75	45	40	35	65
T-NCA1	56	75	51	51	36	65
T-NCA2	55	75	50	45	40	65
T-NCA3	50	75	45	40	35	65

Notes [1] Recommended standard hours: Monday to Friday 7 am – 6 pm; Saturday 8 am – 1 pm.
[2] Sleep disturbance only applicable during OOHW Period 2 (Night)

5.5.2 Predicted construction noise levels

Noise levels from construction activities have been predicted using computer noise modelling. Construction noise levels have been predicted for the indicative construction scenarios described in **Section 5.4**. The predicted noise level contours for the worst case scenario and tabulated results are presented in **Appendix E**.

The predicted noise levels for each construction scenario and work period have been summarised based on the predicted exceedance above the applicable noise management level (NML). These ranges above the NML also correspond with the level of noise mitigation and additional mitigation that would be applicable under the CNVG. The levels of mitigation and the additional mitigation measures are described in **Table 5.6**.

Table 5.6 CNVG Table C-1: Triggers for Additional Mitigation Measures – Airborne Noise

Predicted airborne $L_{Aeq(15min)}$ noise level at receiver Perception	dB(A) above RBL	dB(A) above NML	Additional mitigation measures type[1]:	Mitigation Levels[2]:
All hours				
75dBA or greater			N, V, PC, RO	HA
Standard Hours: Mon - Fri (7am – 6pm), Sat (8am – 1pm), Sun/Pub Hol (Nil)				
Noticeable	5 to 10	0	-	NML
Clearly Audible	10 to 20	< 10	-	NML
Moderately intrusive	20 to 30	10 to 20	N, V	NML+10
Highly intrusive	> 30	> 20	N, V	NML+20
OOHW Period 1: Mon – Fri (6pm – 10pm), Sat (7am – 8am & 1pm – 10pm), Sun/Pub Hol (8am – 6pm)				
Noticeable	5 to 10	< 5	-	NML
Clearly Audible	10 to 20	5 to 15	N, R1, DR	NML+5
Moderately intrusive	20 to 30	15 to 25	V, N, R1, DR	NML+15
Highly intrusive	> 30	> 25	V, IB, N, R1, DR, PC, SN	NML+25
OOHW Period 2: Mon – Fri (10pm – 7am), Sat (10pm – 8am), Sun/Pub Hol (6pm – 7am)				
Noticeable	5 to 10	< 5	N	NML
Clearly Audible	10 to 20	5 to 15	V, N, R2, DR	NML+5
Moderately intrusive	20 to 30	15 to 25	V, IB, N, PC, SN, R2, DR	NML+15
Highly intrusive	> 30	> 25	AA, V, IB, N, PC, SN, R2, DR	NML+25

Notes (refer to detailed descriptions):

1 AA = Alternative Accommodation; V = Verification; IB = Individual briefings; N = Notification; R2 = Respite Period 2; DR = Duration Respite; R1 = Respite Period 1; PC = Phone calls; SN = Specific notifications; Perception = relates to level above RBL

2 NML = Noise Management Level (see Appendix D); HA = Highly Affected (> 75 dB(A) - applies to residences only)

The summary of exceedences for residential receivers for the Old Narrandera Road intersection construction activities are presented in **Table 5.7, Table 5.8** and **Table 5.9** for standard hours, OOHW Period 1 and OOHW Period 2 respectively. The summary of exceedences of the sleep disturbance noise limit for residential receivers for the Old Narrandera Road intersection construction activities are presented in **Table 5.10**. Summary results for each sub-scenario under the Scenario 1 activities are presented in Table E1.1 to Table E1.3 within **Appendix E**.

The summary of exceedences for residential receivers for the Travers Street intersection construction activities are presented in **Table 5.11, Table 5.12** and **Table 5.13** for standard hours, OOHW Period 1 and OOHW Period 2 respectively. The summary of exceedences of the sleep disturbance noise limit for residential receivers for the Travers Street intersection construction activities are presented in **Table 5.14**. The summary of exceedences for commercial/industrial receivers for the Travers Street intersection construction activities are presented in **Table 5.15**. Summary results for each sub-scenario under the Scenario 1 activities are presented in Table E1.4 to Table E1.6 within **Appendix E**.

Table 5.7 Summary of exceedences (number of residential receivers) for Standard Hours - Old Narrandera Road Intersection work area and ancillary areas

Notes [1] Worst-case results due to Scenario 1E

As presented in **Table 5.7** to **Table 5.15**, the noise management levels for construction activities are predicted to be exceeded and additional mitigation measures are anticipated. In accordance with the ICNG and the CNVG, any construction activity which is expected to cause exceedance of the NML at any receiver(s) is required to implement noise mitigation measures to reduce noise impact where feasible and reasonable.

The results presented in **Table 5.7** for the Old Narrandera Road intersection work during standard hours indicate there are 9 receivers predicted to be within the highly affected category, 20 receivers within the moderately intrusive category and 58 receivers in the clearly audible category. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and grubbing scenario (Sc.1B) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during standard hours.

The results presented in **Table 5.8** for Old Narrandera Road during OOHW Period 1 indicate there are 9 receivers predicted to be within the highly affected category, 43 receivers within the moderately intrusive category, 87 receivers in the clearly audible category, and 292 receivers are within the noticeable category. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and pavement work (Sc.1D) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during the OOHW Period 1.

The results presented in **Table 5.9** for Old Narrandera Road during OOHW Period 2 indicate there are 9 receivers predicted to be within the highly affected category, 41 receivers within the highly intrusive category, 68 receivers within the moderately intrusive category, 763 receivers in the clearly audible category, and 557 receivers are within the noticeable category. Additionally, the results presented in **Table 5.10** indicate that 40 receivers are predicted to exceed the sleep disturbance criterion. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and pavement work (Sc.1D) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during the OOHW Period 1.

The results presented in **Table 5.11** for the Travers Street upgrade work during standard hours indicate there are 9 receivers predicted to be within the highly affected category, 1 receiver within the highly intrusive category, 3 receivers within the moderately intrusive category and 50 receivers in the clearly audible category. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and grubbing scenario (Sc.1B) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during standard hours.

The results presented in **Table 5.12** for Old Narrandera Road during OOHW Period 1 indicate there are 9 receivers predicted to be within the highly affected category, 3 receivers within the highly intrusive category, 6 receivers within the moderately intrusive category, 200 receivers in the clearly audible category, and 365 receivers are within the noticeable category. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and pavement work (Sc.1D) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during the OOHW Period 1.

The results presented in **Table 5.13** for Old Narrandera Road during OOHW Period 2 indicate there are 9 receivers predicted to be within the highly affected category, 8 receivers within the highly intrusive category, 58 receivers within the moderately intrusive category, 523 receivers in the clearly audible category, and 188 receivers are within the noticible category. Additionally, the results presented in **Table 5.14** indicate that 20 receivers are predicted to exceed the sleep disturbance criterion. The results are the worst case construction scenario for the median removal (Sc.1E), similar results are anticapted for the paving and asphalting scenario (Sc.1G), the clearing and pavement work (Sc.1D) and the indicative road work scenario (Sc.3). The number of impacted receivers reduce with other construction scenarios during the OOHW Period 2.

As the predicted noise levels exceed the NML during standard hours (day period) and outside of standard hours (OOHW Period 1 and OOHW Period 2), additional reasonable and feasible non-standard construction noise mitigation measures would be implemented wherever possible as well as the standard construction noise mitigation measures.

The predicted noise impact categories are presented graphically in Figure H1.1 to Figure H1.6 within **Appendix H**. Figures H1.1 to H1.3 in **Appendix H** present the receiver noise categories for the worst-case noise impact construction Scenario 1E at Old Narrandera Intersection**.** Figure H1.1 in **Appendix H** shows the noise categories for standard hours. Figure H1.2 in **Appendix H** shows the noise categories for OOHW Period 1. Figure H1.3 in **Appendix H** shows the noise categories for OOHW Period 2. At a high level, the maps show that receivers nearest the construction activities generally have the greater noise impact. The maps also show that some sensitive receivers are shielded by intervening building structures.

Figures H1.4 to H1.6 in **Appendix H** present the receiver noise categories for the worst-case noise impact construction Scenario 1E at Travers Street Intersection**.** Figure H1.4 in **Appendix H** shows the noise categories for standard hours. Figure H1.5 in **Appendix H** shows the noise categories for OOHW Period 1. Figure H1.6 in **Appendix H** shows the noise categories for OOHW Period 2.

The additional non-standard noise mitigation measures that would be implemented will depend on the exceedance above the NML at each receiver and will be determined in accordance with Appendix C of the CNVG for specific construction activities during the detailed design and the construction phases of the proposal.

The recommended additional non-standard noise mitigation measures given in CNVG Table C-1 are reproduced in **Appendix G**.

5.6 Construction-related traffic

The construction-related traffic will access the construction sites via the existing road network. As indicated in the traffic counts, the existing traffic volumes are substantial and therefore the additional contribution of the construction-related traffic accessing the construction site is anticipated to be negligible.

5.7 Consideration of construction noise impacts on horses

The potential noise impacts from construction activities on horses in the Travers Street area and the nearby Racecourse have been considered as part of this assessment. The proposed Travers Street intersection upgrade is being undertaken in an urban and industrialised area. This area already includes traffic noise from the Olympic Highway as well as commercial and industrial operations in the immediate vicinity of Travers Street. Therefore horses in the Travers Street area are already considered to be habituated to intermittent noise events and mechanised noise sources.

There is limited publically available information presenting the results of effects of construction or mechanised noise on horses. A study prepared by Marshal Day Acoustics (Huybregts, 2008) investigated the noise exposure on horses at Melbourne's Flemington Racecourse. This study suggested that horses are exposed to a wide range of noise levels from 50 dB(A) to 90 dB(A) $L_{Aeq,15min}$ and a variety of noise sources across a race day. The study suggested that a noise management level of 65 dB(A) L_{Aeq}, although arbitrary, appeared to be a reasonable threshold for further consideration of the management of noise levels on horses. The study also suggested there is a link between startling noises and associated visual stimulation.

The predicted construction noise levels for Travers Street are presented in Figures E1.2, E1.13, E1.14, E1.15, E1.16, E1.17, E1.18, E1.20 in **Appendix E**. The figures indicate that the predicted 65 dB(A) L_{Aeq} noise level contour encroaches onto the racecourse area for each of the construction scenarios.

The predicted construction noise levels should be considered in the context of the existing acoustic environment that comprises traffic noise and industrial noise sources. On this basis, the introduction of mechanised construction activities within the existing acoustic environment at the Travers Street intersection are anticipated to be minimal. However, management of the potential construction noise levels may need to be considered at times. Management of these potential construction noise levels may include the following:

- noise level monitoring to establish existing noise level exposure for horses at the racecourse
- noise level monitoring during high noise construction activities to establish the noise level exposure for horses at the racecourse and their response to the noise
- reasonable and feasible mitigation measures to reduce the construction noise levels onto the racecourse, this may include consideration of construction scheduling, plant/equipment selections, temporary shielding

The management of the construction activities and associated noise impacts should also consider the line-of-sight to the existing stable complex.

5.8 Construction Vibration

Many items of road construction equipment generate vibration that may be perceptible to receivers and cause annoyance, or cause structural damage to buildings or other structures.

The types of vibration sensitive receivers in the proposal area include:

- Residential dwellings (occupants)
- Residential dwellings (structures)
- Commercial buildings.

The commercial buildings in the area are structurally similar to residential buildings, therefore the assessment for residential buildings is considered to be relevant for the commercial receivers as well.

5.8.1 Vibration Criteria

5.8.1.1 Vibration effects on structures

Criteria for vibration effects on building structures recommended in the CNVG are given in *British Standard 7385 Part 2 Evaluation and measurement of vibration in buildings 1993*. The criteria in BS7385 are given in terms of peak component (x-, y- or z-axes separately) vibration velocity values from transient (impulsive) vibration events. The criteria for continuous vibration are recommended to be 50% lower than for impulsive vibration. The vibration criteria for the protection of structures and buildings from cosmetic damage (eg. hairline cracks in drywalls, etc.) are given in **Table 5.16**.

Table 5.16 Vibration criteria for cosmetic damage to structures (peak vibration velocity mm/s)

Type of Structure	Peak Component Particle Velocity (mm/s)		
	4 Hz – 15 Hz	15 Hz – 40 Hz	40 Hz and above
Reinforced or framed structures. **Industrial and heavy commercial buildings**	50 (transient (impulsive) vibration) 25 (continuous vibration)		
Un-reinforced or light framed structures. **Residential or light commercial type buildings.**	15 - 20 (transient (impulsive) vibration) 7.5 - 10 (continuous vibration)	20 - 50 (transient (impulsive) vibration) 10 - 25 (continuous vibration)	50 (transient (impulsive) vibration) 25 (continuous vibration)

5.8.1.2 Heritage protected structures

Assessment guidelines for vibration damage to heritage-protected structures are commonly referenced from the German Standard DIN 4150-3:1999-02. This standard differentiates between short-term and long-term vibration, where short-term vibration is caused by sources such as drop-hammers, impact piling, etc. All other sources of vibration are considered to be long-term.

The guideline value for heritage-protected structures for long-term vibration is 2.5 mm/s peak particle velocity (PPV) in the horizontal plane at all frequencies. This guideline value is primarily intended for older, sensitive, above-ground structures (typically buildings).

5.8.1.3 Human perception of vibration

Criteria for the human perception of vibration from construction activities are given in the EPA's Assessing Vibration: A Technical Guideline (the vibration guideline). The criteria in the vibration guideline are given for continuous vibration, impulsive vibration and for intermittent vibration. For continuous and impulsive vibration, the criteria are given in terms of root-mean-square (rms) vibration acceleration (m/s^2) in the frequency range 1 - 80 Hertz (Hz). For intermittent vibration, the criteria are given in terms of vibration dose value (VDV), which is a parameter used for assessing the combined magnitude and the total duration of vibration impacts.

The criteria given in the vibration guideline for continuous or impulsive vibration relevant to the receivers in the area are given in **Table 5.17**. The frequency weightings are given in the vibration guideline in Appendix B3.

Table 5.17 Criteria for continuous and impulsive vibration for human comfort (weighted vibration acceleration m/s^2) 1-80 Hz

Location	Assessment Period [1]	Preferred values		Maximum values	
		z-axis	x- and y-axes	z-axis	x- and y-axes
Continuous vibration					
Residences	Day	0.010	0.0071	0.020	0.014
	Night	0.007	0.005	0.014	0.010
Offices, schools, educational institutions or places of worship	Day or Night	0.020	0.014	0.040	0.028
Workshops	Day or Night	0.040	0.029	0.080	0.058
Impulsive vibration					
Residences	Day	0.30	0.21	0.60	0.42
	Night	0.10	0.071	0.20	0.14
Offices, schools, educational institutions or places of worship	Day or Night	0.64	0.46	1.28	0.92
Workshops	Day or Night	0.64	0.46	1.28	0.92

Note: [1] Day time period is 7 am – 10 pm. Night time period is 10 pm – 7 am.

The criteria for intermittent vibration given in the vibration guideline for the relevant receivers in the area are shown in **Table 5.18**. The vibration dose value (VDV) is calculated using the frequency-weighted rms acceleration as described in the vibration guideline.

Table 5.18 Vibration criteria for intermittent vibration (VDV m/s$^{1.75}$)

Location	Day time period[1]		Night time period[1]	
	Preferred value	Maximum value	Preferred value	Maximum value
Residences	0.20	0.40	0.13	0.26
Offices, schools, educational institutions or places of worship	0.40	0.80	0.40	0.80
Workshops	0.80	1.60	0.80	1.60

Note: [1] Day time period is 7 am – 10 pm. Night time period is 10 pm – 7 am

According to the Vibration Guideline, the 'preferred' vibration limits are not mandatory but should be sought to be achieved through reasonable mitigation measures. Where all possible and reasonable measures have been applied, values up to the 'maximum' value may be used if they can be justified. For values beyond the maximum value, direct negotiation with the affected receivers must be carried out.

Recommended safe working distances for vibration generating equipment from sensitive receivers (i.e. the receiver building or its occupants) are given in Table 2 of the CNVG, reproduced in **Table 5.19**.

Table 5.19 Recommended minimum working distances for vibration generating plant from a residential sensitive receiver (CNVG Table 2)

Plant Item	Rating/Description	Minimum Working Distance	
		Cosmetic Damage (Residential Building)	Human Response
Vibratory Roller	< 50 kN (Typically 1-2 tonnes)	5 m	15 m to 20 m
	< 100 kN (Typically 2-4 tonnes)	6 m	20 m
	< 200 kN (Typically 4-6 tonnes)	12 m	40 m
	< 300 kN (Typically 7-13 tonnes)	15 m	100 m
	> 300 kN (Typically 13-18 tonnes)	20 m	100 m
	> 300 kN (> 18 tonnes)	25 m	100 m
Small Hydraulic Hammer	300 kg - 5 to 12t excavator	2 m	7 m
Medium Hydraulic Hammer	900 kg – 12 to 18t excavator	7 m	23 m
Large Hydraulic Hammer	1600 kg – 18 to 34t excavator	22 m	73 m
Vibratory Pile Driver	Sheet piles	2 m to 20 m	20 m
Pile Boring	≤ 800 mm	2 m (nominal)	4 m
Jackhammer	Hand held	1 m (nominal)	2 m

Note: More stringent conditions may apply to heritage or other sensitive structures

Indicative vibration buffer areas are presented in **Figure 5.1** for the Old Narrandera Road intersection and **Figure 5.2** for the Travers Street intersection. These are based on a large vibratory roller (> 18 tonnes) nominally working within the design footprint. The figures highlight the 25m buffer area for potential cosmetic damage and the 100m buffer area for human perception.

FIGURE 5.2

Indicative Vibration Buffers Area (Non-heritage Structures) for Travers Street Intersection

5.8.2 Heritage protected receivers

There are heritage protected structures located within the Murrumbidgee Turf Club (MTC) adjacent the Travers Street Intersection, as such safe working distances have been estimated for this assessment. The location of these heritage structures are shown in **Figure 5.3**. As shown in the figure, the nearest heritage structure is approximately 45m from the Travers Street proposal area.

The guideline value in DIN 4150 for heritage-protected structures for long-term vibration is 2.5 mm/s in the horizontal plane at all frequencies. This guideline value is primarily intended for older, sensitive, above-ground structures (typically buildings).

Table 2 in CNVG provides recommended safe working distances for vibration generating plant from a sensitive receiver, for protection from cosmetic damage to residential buildings and human response. With reference to the vibration criteria recommended in DIN 4150-3 and CNVG Table 2, safe working distances for heritage-protected structures have also been estimated. The recommended safe working distances are provided in **Table 5.20**.

The minimum safe working distances for heritage-protected structures from road construction works have been estimated based on extrapolation from the safe working distances for residential structures (for continuous vibration sources) assuming body (compressional) waves attenuating at a rate of 6 dB per doubling of distance.

Table 5.20 Recommended safe working distances for vibration generating plant from heritage protected structures.

Plant Item	Rating/Description	Minimum Working Distance Cosmetic Damage
Vibratory Roller	< 50 kN (Typically 1-2 tonnes)	30 m
	< 100 kN (Typically 2-4 tonnes)	36 m
	< 200 kN (Typically 4-6 tonnes)	72 m
	< 300 kN (Typically 7-13 tonnes)	90 m
	> 300 kN (Typically 13-18 tonnes)	120 m
	> 300 kN (> 18 tonnes)	150 m
Small Hydraulic Hammer	300 kg - 5 to 12t excavator	12 m
Medium Hydraulic Hammer	900 kg – 12 to 18t excavator	42 m
Large Hydraulic Hammer	1600 kg – 18 to 34t excavator	132 m
Vibratory Pile Driver	Sheet piles	12 m - 120 m
Pile Boring	≤ 800 mm	12 m
Jackhammer	Hand held	6 m

Based on the buffer distances noted in **Table 5.20**, there is potential for vibration generating activities within the safe working distances of the heritage protected structures. The potential vibration impacts and specific management and mitigation strategies for the heritage structures will require site-specific assessment by the construction contractor.

5.8.3 Vibration mitigation

Based on the construction activity information provided by Transport for NSW and the vibration criterion given in DIN 4150-3 that is commonly referenced in NSW, it is not expected that any of the planned construction activities would utilise any significant vibration-generating equipment within the estimated safe working zones. With appropriate machine selection and management during the construction phase, cosmetic damage to non-heritage structures is not expected for the proposed work.

The CNVG states that where the predicted vibration levels exceed the human comfort objectives, the procedures Appendix C of the CNVG are to be followed in order to mitigate the potential impacts at sensitive receivers.

The CNVG also states that if the predicted ground-bourne vibration levels exceed the cosmetic damage objectives, a different construction method with lower source vibration levels must be used where feasible and reasonable otherwise construction works should not proceed unless attended vibration measurements are undertaken at the commencement of the works. If there is any risk of exceedance of the cosmetic damage objective, a permanent vibration monitoring system should be installed, to warn plant operators (via flashing light, audible alarm, SMS, etc) when vibration levels are approaching the cosmetic damage objective.

Site-specific management and mitigation strategies will need to be assessed by the construction contractor for vibration generating activities proposed to be undertaken within the safe work buffer distances for the heritage protected structures located in the MTC. Depending on machinery and equipment used during construction, cosmetic damage to heritage structures could be expected for a distance of up to 150m from the work.

The actual construction equipment to be used on site would be confirmed by the construction contractor during the detailed design phase. In the event that any vibration-generating equipment would be used within the recommended safe working distances nominated in **Table 5.19** and **Table 5.20**, a structural engineering assessment and dilapidation survey would be undertaken before and after the works. The structural engineering assessment would nominate suitable vibration criteria, and continuous vibration monitoring will be undertaken for the duration of the vibration-generating construction works.

The standard vibration mitigation measures are described in detail in Appendix B of the CNVG and are reproduced in **Appendix F**. The additional vibration mitigation measures are described in detail in Appendix C of the CNVG and are reproduced in **Appendix G**.

5.9 Blasting

It is understood that blasting is not required for the proposal. In the event that blasting is deemed to be required during later design stages, a detailed blasting assessment should be undertaken.

5.10 Mitigation

Measures for mitigation of the potential noise and vibration impacts are recommended in Appendix B of the CNVG. It is recommended that all standard construction noise mitigation measures detailed in Appendix B of the CNVG be implemented at all construction sites during all time periods. Appendix B of the CNVG is reproduced in **Appendix F**.

Additionally, all applicable additional noise mitigation measures in Appendix C of the CNVG should be implemented for all works undertaken outside of standard hours, as indicated in **Table 5.6**. The additional noise mitigation measures shown in **Table 5.6** are described in detail in Appendix C of the CNVG and are reproduced in **Appendix G**. These additional noise mitigation measures will be implemented where practicable, reasonable and feasible.

Noise and vibration mitigation measures to be implemented during construction of the proposal include:

- A Noise and Vibration Management Plan (NVMP) will be prepared and implemented as part of the CEMP. The NVMP will generally follow the approach in the ICNG and identify:
    - all potential significant noise and vibration generating activities associated with the project
    - feasible and reasonable mitigation measures to be implemented
    - a monitoring program to assess performance against relevant noise and vibration criteria
    - arrangements for consultation with affected neighbours and sensitive receivers, including notification and complaint handling procedures
    - contingency measures to be implemented in the event of non-compliance with noise and vibration criteria.
- All sensitive receivers likely to be affected will be notified at least 7 days prior to commencement of any works associated with the activity that may have an adverse noise or vibration impact. The notification will provide details of:
    - the proposal
    - the construction period and construction hours
    - contact information for project management staff
    - complaint and incident reporting
    - how to obtain further information.
- All employees, contractors and subcontractors are to receive an environmental induction.
- The induction must include at a minimum:
    - all applicable mitigation measures
    - hours of works
    - any limitations on high noise-generating activities
    - location of nearest sensitive receivers
    - designated parking areas
    - relevant approval conditions
    - incident procedures.
- Contractors are to keep noise to a minimum including no shouting or the use of loud stereos/radios on site.
- No dropping of materials from height, throwing of metal items or slamming of car doors.

- If required a noise verification program should be carried out for the duration of the works in accordance with the NVMP for the proposal.
- The noise levels of plant and equipment must have operating Sound Power or Sound Pressure Levels compliant with the criteria in Appendix H of the CNVG.
- Non-tonal reversing beepers must be fitted and used on all construction vehicles and mobile plant used regularly on site and for any out of hours work.
- Limit the use of engine compression brakes at night.
- The CEMP and NVMP should be regularly updated to account for any changes in noise and vibration management of the proposal.
- Where feasible and reasonable, construction should be carried out during the standard daytime working hours. Work generating high noise and/or vibration should be scheduled during less sensitive time periods.
- Noise emitting plant to be directed away from sensitive receivers.
- Plant used intermittently to be throttled down or shut down when not in use.
- Loading and unloading of materials/deliveries is to occur as far as possible from sensitive receivers.
- Vibration generating plant not listed in **Table 5.19** should not be used within the identified safe working distances. If vibratory rollers or other vibration inducing construction sources are required within the safe working distances for residential or heritage structures nominated in **Table 5.19** and **Table 5.20**, the following is recommended:
    - an independent specific structural assessment is undertaken on the structure to ascertain the structural integrity and its ability to withstand vibration, and establishment of an appropriate vibration criterion
    - a dilapidation survey is undertaken on the structure prior to works commencing, and regular inspection of the structure throughout the construction activities
    - pre-construction vibration monitoring to establish baseline vibration impacts induced on the structure from road traffic
    - where appropriate, continuous vibration monitoring is conducted on the structure for the duration of the period of construction while vibration generating equipment is used. The vibration logger should be equipped with the facility to remotely alert the site to reduce or cease construction activities if vibration levels are approaching the criterion threshold
    - stationary noise sources should be enclosed or shielded where feasible or reasonable.

6.0 Conclusion

An assessment has been prepared for the proposed upgrade of Old Narrandera Road and Travers Street intersections at the Olympic Highway in Wagga Wagga, NSW.

Potential construction noise and vibration impacts have been assessed in accordance with the CVNG.The significance of these exceedances was evaluated and additional mitigation measures were discussed in **Section 5.9** consistent with Appendix C of the CNVG. The application of standard construction noise mitigation measures and additional mitigation measures, as presented in **Section 5.0**, may reduce the number of receivers exceeding the relevant NML during the project. Regarding potential vibration emissions generated during construction, safe working buffer distances for addressing human comfort and potential building cosmetic damage for the indicative plant onto surrounding structures and receivers are discussed in **Section 5.0**.

An operational traffic noise assessment has been completed in accordance with the RNP and NCG. This assessment found that the proposal is not expected to result in an increase of road traffic noise of more than 2.0 dB(A) at any receiver. As the changes in road alignment are only minor at each intersection, the minor works noise criteria have been applied and therefore the proposal will not require the inclusion of operational noise mitigation measures.

APPENDIX B

Existing Traffic Counts

Memorandum

To: Caitlin Adcock – Umwelt
From: Hamish McDonald – Quantum Traffic
Subject: Traffic Data
Project Address: Olympic Highway, Wagga Wagga
Date: 25th March 2021 Reference No.: 21-0005

1. Introduction

Quantum Traffic have been engaged by Umwelt to collect and analyse a range of traffic data to support the Review of Environmental Factors in relation to the upgrade of the Old Narrandera Road / Olympic Highway and Olympic Highway / Travers Street, intersections near Wagga Wagga.

This memorandum summarises and presents the results of the traffic data collection and analysis.

2. Data Collection

The primary objective of the traffic data collection is to provide the inputs required to support the calibration of a noise model under the existing conditions. On this basis, a combination of pneumatic tube and radar / video vehicle detectors have been used to collect the required vehicle count, vehicle speed and vehicle classification data. The data presented in this document was collected from Friday, 26th February 2021 to Thursday, 4th March 2021. The types and locations of the five (5) vehicle detectors are presented at Table 1 and Figure 1 below.

Table 1: Vehicle Detector Types & Locations

No.	Type	Location Description
1	Radar vehicle detector & video survey	Olympic Hwy, approx. 300m NE of Old Narrandera Rd (-35.082573, 147.352500)
2	Radar vehicle detector & video survey	Old Narrandera Rd, approx. 230m W of Olympic Hwy (-35.08400,147.347760)
3	Pneumatic tube vehicle detector	Olympic Hwy, approx. 410m S of Old Narrandera Rd (-35.087504, 147.348470)
4	Radar vehicle detector & video survey	Travers St, approx. 200m E of Olympic Hwy (-35.100183, 147.351445)
5	Radar vehicle detector & video survey	Olympic Hwy, approx. 120m S of Travers St (-35.101849, 147.349507)

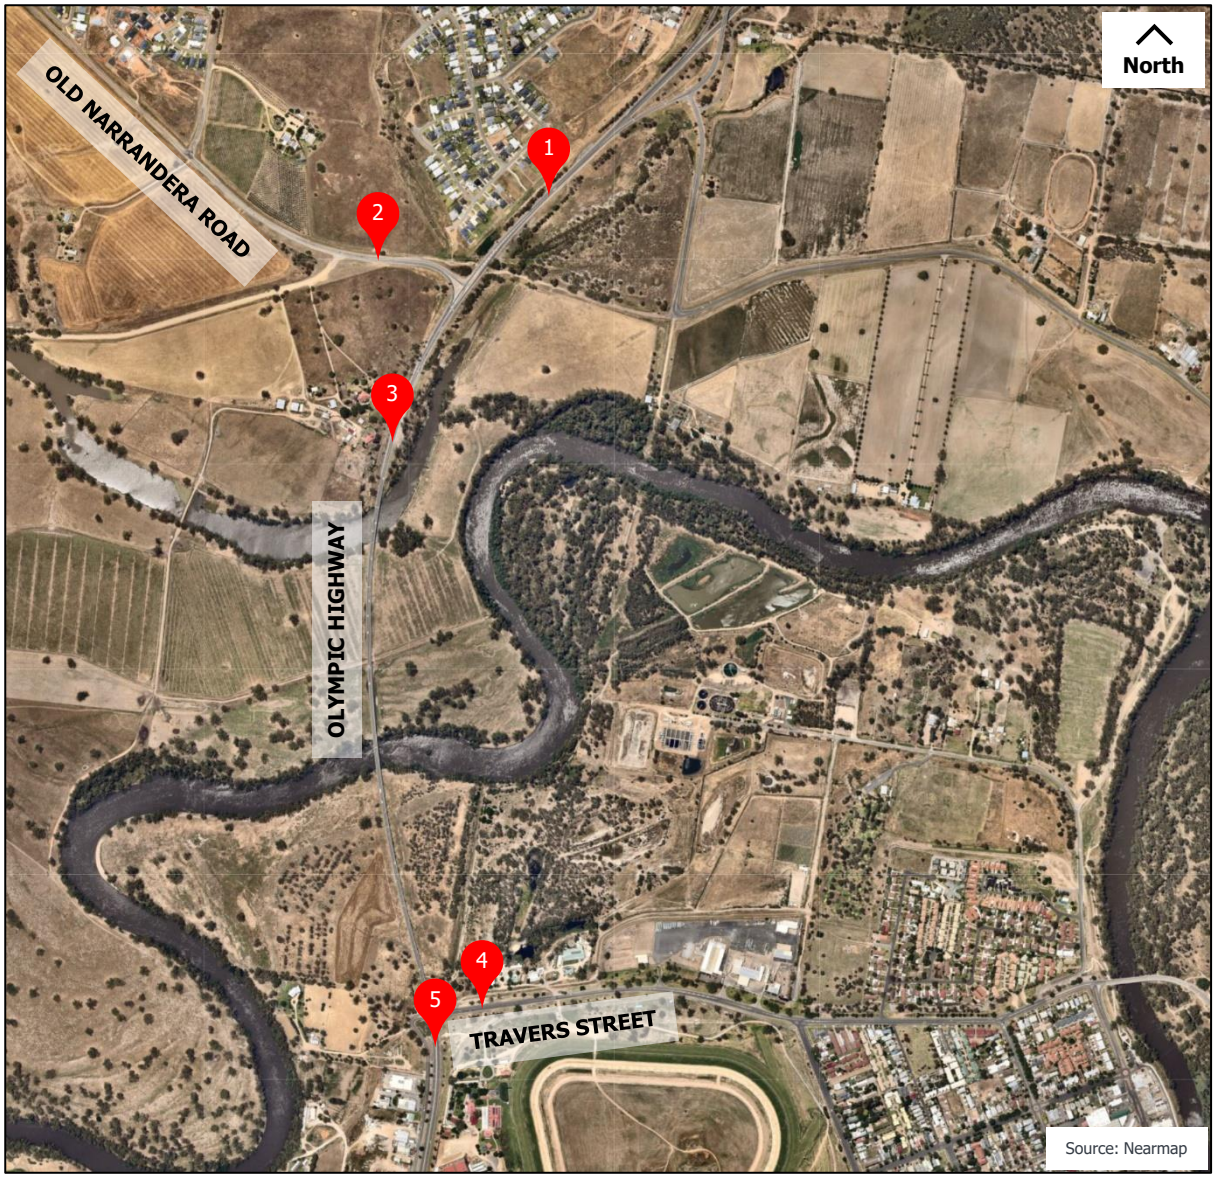

Figure 1: Data Collection Locations

3. Traffic Data

The following sections present a summary of the collected traffic data to provide an overview of the operation of the road network, detailed datasets are provided at Appendix A.

Table 2 below, presents the key traffic statistics on an average weekday, a Saturday and a Sunday.

Table 2: Daily Traffic Data Summary

Location No.	Daily Traffic Volume [veh]			Heavy Vehicle %*	85th %ile Speed [km/h]
	NB/EB	SB/WB	Combined		
Average Weekday					
1	8,372	8,462	16,834	7.0%	80.4
2	3,315	3,499	6,813	9.2%	71.7
3	11,816	11,780	23,596	7.2%	80.6
4	4,829	5,068	9,897	4.6%	61.8
5	8,170	8,175	16,345	20.8%	76.8
Saturday					
1	6,195	6,291	12,486	4.7%	80.6
2	2,752	2,827	5,579	5.0%	71.9
3	8,740	8,784	17,524	4.7%	80.6
4	4,422	4,571	8,993	3.4%	63.2
5	6,089	6,158	12,247	16.0%	77.2
Sunday					
1	4,981	5,114	10,095	5.4%	80.5
2	3,361	2,521	5,882	4.5%	72.2
3	6,919	6,747	13,666	5.2%	80.5
4	3,553	3,614	7,167	3.7%	59.4
5	5,204	5,260	10,464	14.9%	69.5

Notes:
* Heavy vehicle % represents vehicle classes 3-13 as defined by Austroads

It can be seen that the section of Olympic Highway between Old Narrandera Road and Travers Street consistently carries the highest traffic volumes within the study area.

The section of Olympic Highway south of Travers Street is identified as carrying a significantly higher proportion of heavy vehicles, compared to the remainder of the locations.

The observed 85th percentile speeds fall close to the existing posted speed limits at all of the data collection locations.

Figure 2 through Figure 6 below present the classified volume and speed profiles for each of the five (5) data collection locations on an average weekday, a Saturday and a Sunday. It is again noted that heavy vehicles volume presented below represent vehicles classes 3-13 as defined by Austroads. The Austroads vehicle classification definitions are presented at Appendix B.

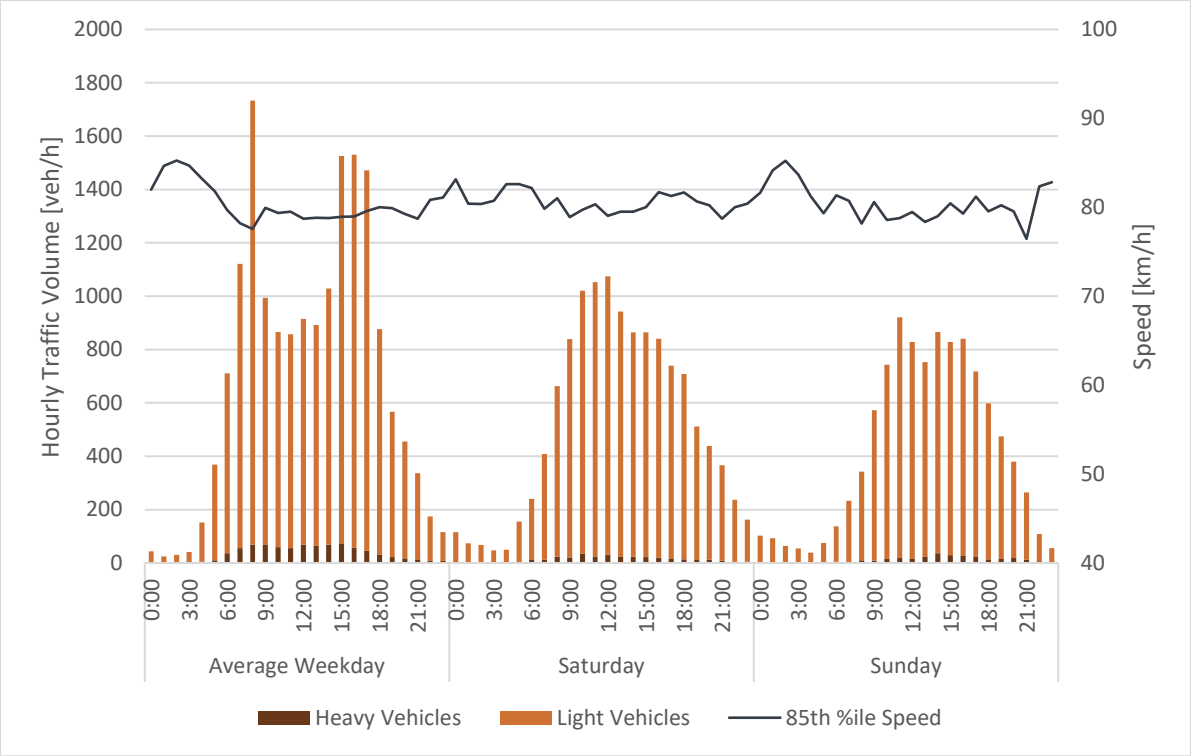

Figure 2: Volume & Speed Profiles – Olympic Highway, northeast of Old Narrandera Road

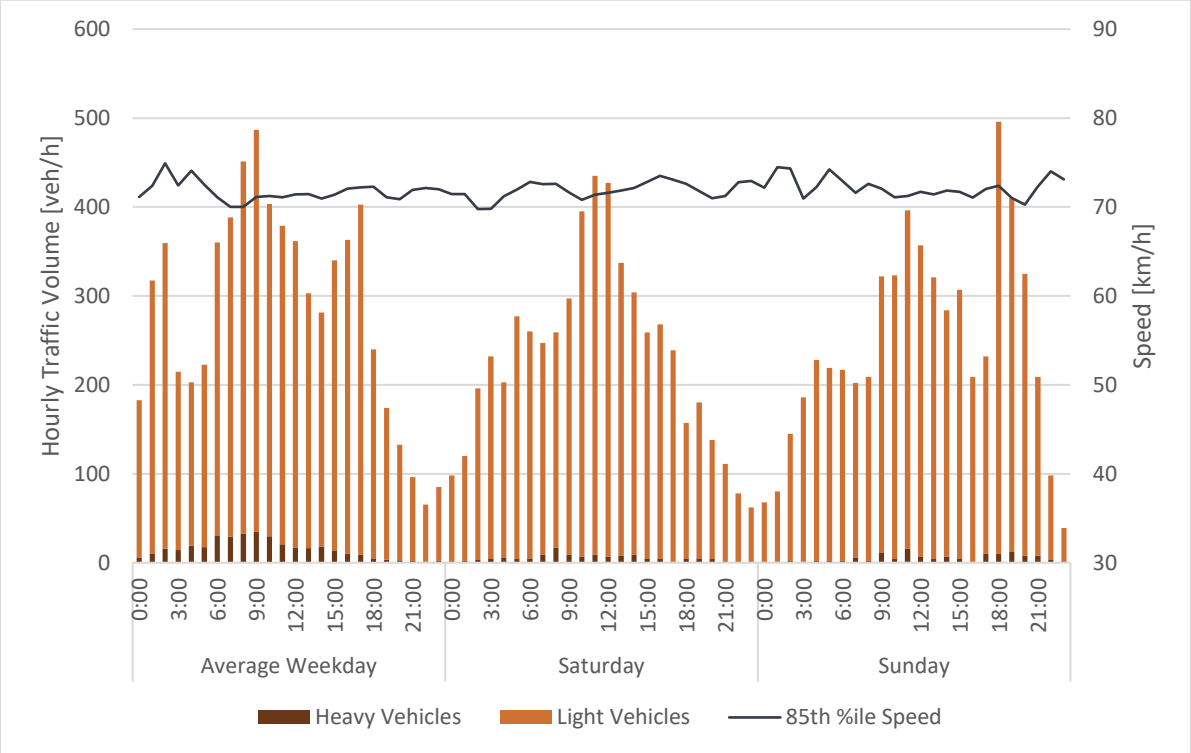

Figure 3: Volume & Speed Profiles – Old Narrandera Road, west of Olympic Highway

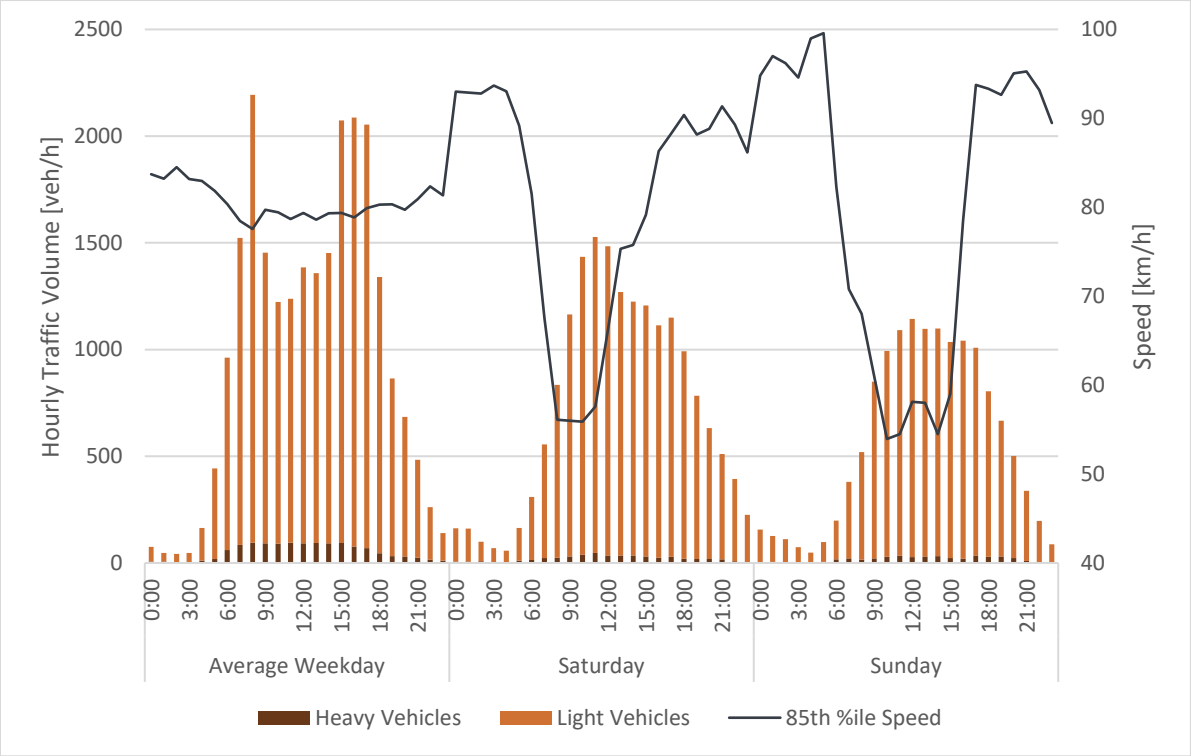

Figure 4: Volume & Speed Profiles – Olympic Highway, south of Old Narrandera Road

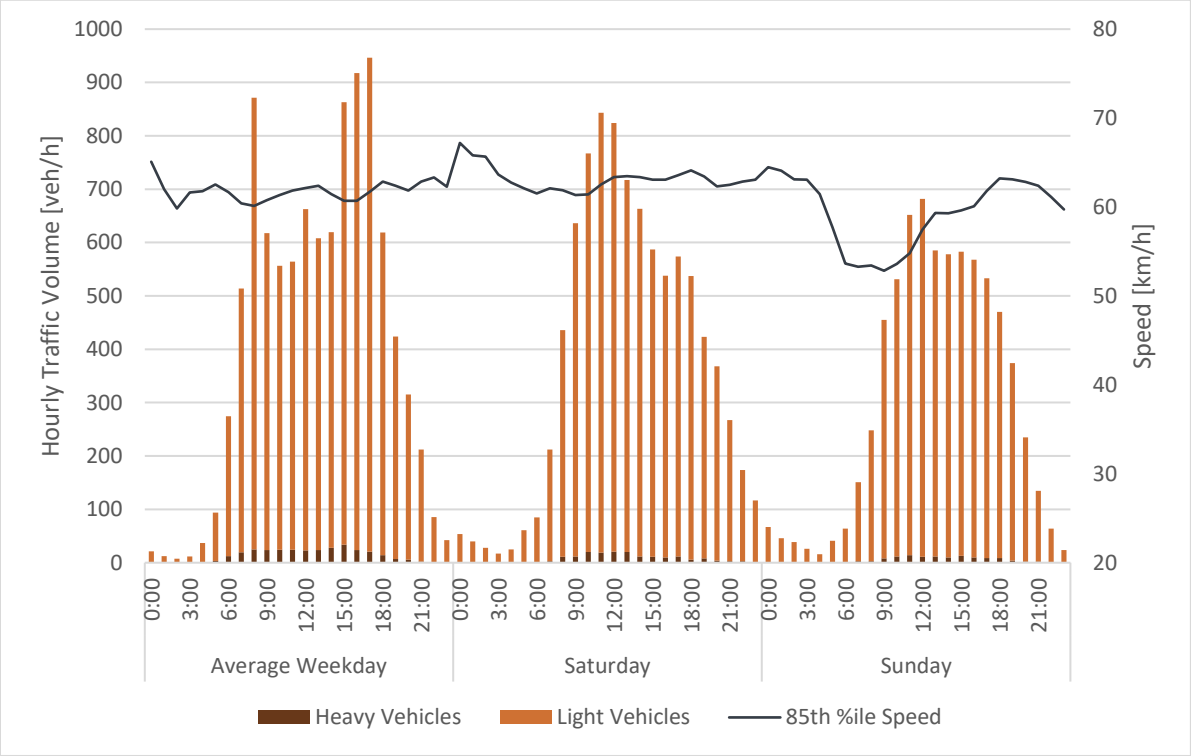

Figure 5: Volume & Speed Profiles – Travers Street, east of Olympic Highway

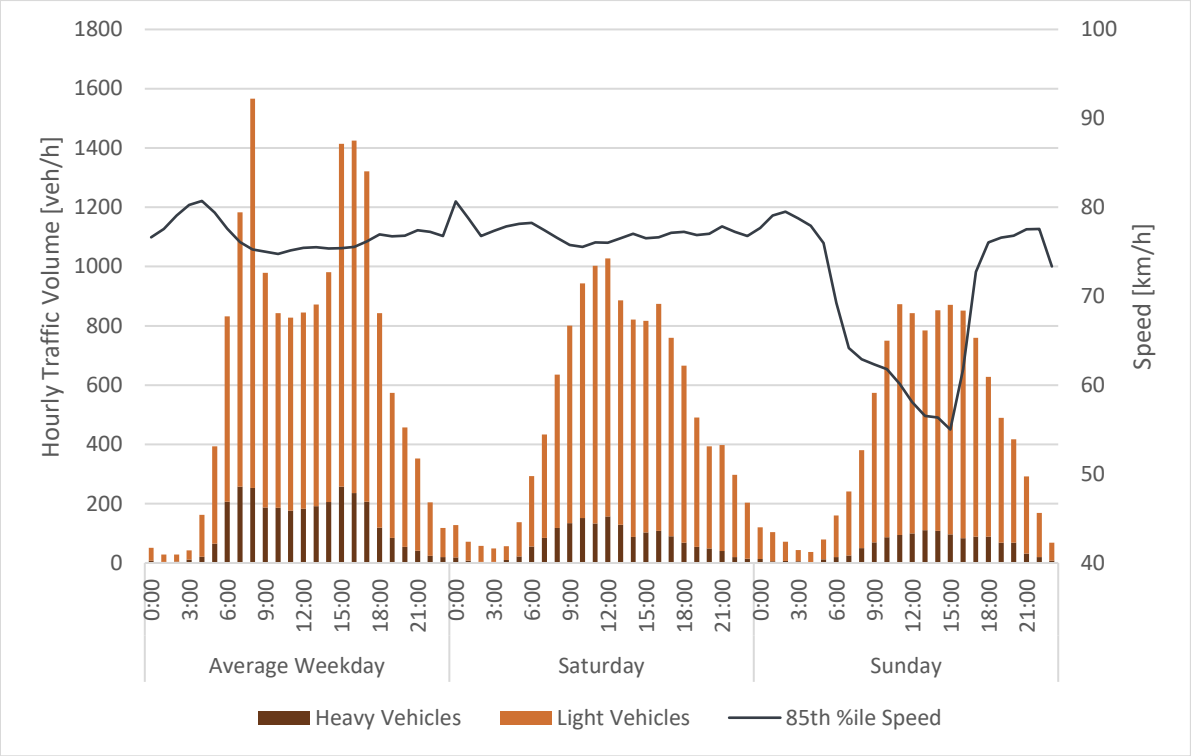

Figure 6: Volume & Speed Profiles – Olympic Highway, south of Travers Street

All five (5) locations generally show the typical weekday and weekend traffic volume profiles, with the Sunday evening (6pm-9pm) and early weekday morning (1am-3am) peaks on Old Narrandera Road notable exceptions.

Furthermore, significant decreases in the 85th percentile speed were noted on Saturday morning (8am-12noon) on Olympic Highway, between Old Narrandera Road and Travers Street and on Sunday (generally 7am-4pm) on the three (3) southern-most locations, Olympic Highway between Old Narrandera Road and Travers Street, Travers Street to the east of Olympic Highway and Olympic Highway to the south of Travers Street.

The cause of these variations in traffic volume and 85th percentile speed is not clear from the data.

Appendix B

Austroads Vehicle Classification

AUSTROADS Vehicle Classification System

Level 1	Level 2		Level 3	AUSTROADS Classification		
Length (indicative)	**Axles and Axle Groups**		**Vehicle Type**			
Type	**Axles**	**Groups**	**Typical Description**	**Class**	**Parameters**	**Typical Configuration**
	LIGHT VEHICLES					
Short up to 5.5m		1 or 2	**Short** Sedan, Wagon, 4WD, Utility, Light Van, Bicycle, Motorcycle, etc	**1**	d(1) ≤ 3.2m and axles = 2	
Medium 5.5m to 14.5m	3, 4 or 5	3	**Short - Towing** Trailer, Caravan, Boat, etc	**2**	groups = 3 d(1) ≥ 2.1m, d(1) ≤ 3.2m, d(2) ≥ 2.1m and axles = 3, 4 or 5	
	HEAVY VEHICLES					
	2	2	**Two Axle Truck or Bus**	**3**	d(1) > 3.2m and axles = 2	
	3	2	**Three Axle Truck or Bus**	**4**	axles = 3 and groups = 2	
	> 3	2	**Four Axle Truck**	**5**	axles > 3 and groups = 2	
Long 11.5m to 19.0m	3	3	**Three Axle Articulated** Three axle articulated vehicle, or Rigid vehicle and trailer	**6**	d(1) > 3.2m, axles = 3 and groups = 3	
	4	> 2	**Four Axle Articulated** Four axle articulated vehicle, or Rigid vehicle and trailer	**7**	d(2) < 2.1m or d(1) < 2.1m or d(1) > 3.2m axles = 4 and groups > 2	
	5	> 2	**Five Axle Articulated** Five axle articulated vehicle, or Rigid vehicle and trailer	**8**	d(2) < 2.1m or d(1) < 2.1m or d(1) > 3.2m axles = 5 and groups > 2	
	≥ 6	> 2	**Six Axle Articulated** Six axle articulated vehicle, or Rigid vehicle and trailer	**9**	axles = 6 and groups > 2 or axles > 6 and groups = 3	
Medium Combination 17.5m to 36.5m	> 6	4	**B Double** B Double, or Heavy truck and trailer	**10**	groups = 4 and axles > 6	
	> 6	5 or 6	**Double Road Train** Double road train, or Medium articulated vehicle and one dog trailer (M.A.D.)	**11**	groups = 5 or 6 and axles > 6	
Large Combination Over 33.0m	> 6	> 6	**Triple Road Train** Triple road train, or Heavy truck and three trailers	**12**	groups > 6 and axles > 6	
Definitions:

Group: Axle group, where adjacent axles are less than 2.1m apart

Groups: Number of axle groups

Axles: Number of axles (maximum axle spacing of 10.0m)

d(1): Distance between first and second axle

d(2): Distance between second and third axle

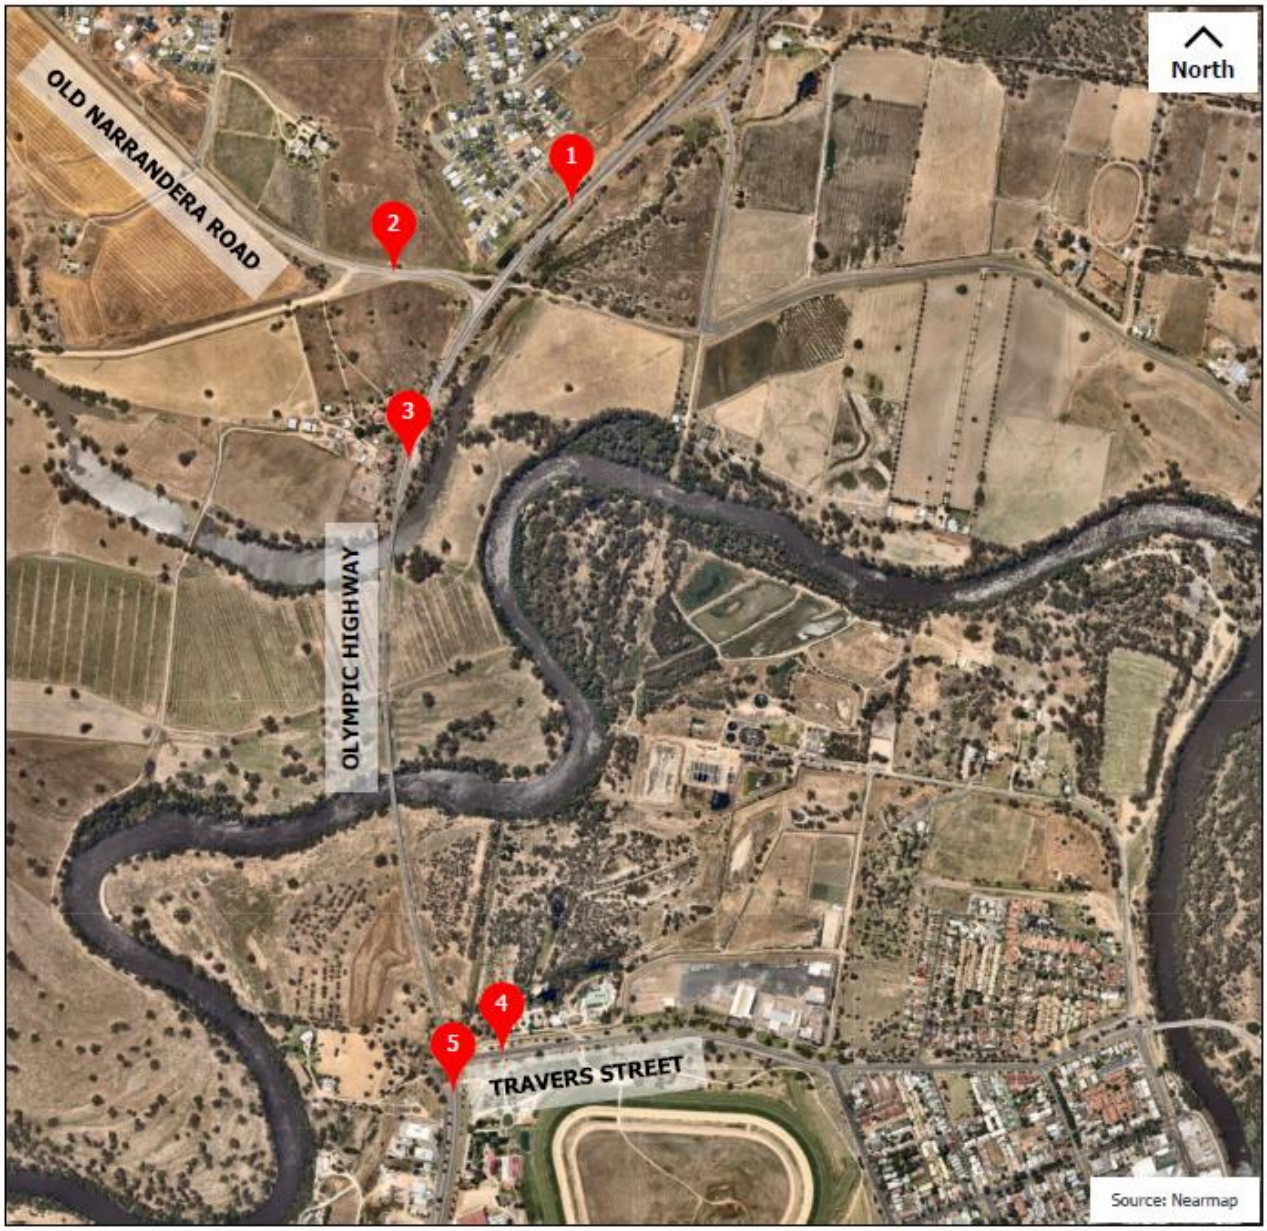

Figure 1: Data Collection Locations

APPENDIX E

Predicted Construction Noise Levels

Table E1.1 Summary of exceedences (number of residential receivers) for Standard Hours - Old Narrandera Road Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<-5 dB(A) below NML	2,314	2320	2285	2312	2303	2266	2318	2278
Noticeable	-5 to 0 dB(A) below NML	33	34	40	32	32	52	34	42
Clearly audible	0 to 10 dB(A)	43	37	54	46	54	58	39	57
Moderately intrusive	10 to 20 dB(A)	13	13	19	13	13	20	12	20
Highly intrusive	>20 dB(A)	0	0	0	0	0	0	0	0
Highly affected >75 dB(A)	-	2	1	7	2	3	9	2	8

Table E1.2 Summary of exceedences (number of residential receivers) for OOHW Period 1 - Old Narrandera Road Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<NML	2229	2283	2066	2199	2159	1974	2266	2010
Noticeable	0 to 5 dB(A)	86	37	220	114	145	292	53	269
Clearly audible	5 to 15 dB(A)	60	58	72	60	63	87	58	75
Moderately intrusive	15 to 20 dB(A)	28	26	40	30	35	43	26	43
Highly intrusive	>25 dB(A)	0	0	0	0	0	0	0	0
Highly affected >75 dB(A)	-	2	1	7	2	3	9	2	8

Table E1.3 Summary of exceedences (number of residential receivers) for OOHW Period 2 - Old Narrandera Road Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<NML	1394	1622	1076	1319	1217	967	1524	1013
Noticeable	0 to 5 dB(A)	566	482	613	602	633	557	529	588
Clearly audible	5 to 15 dB(A)	360	225	607	397	465	763	269	689
Moderately intrusive	15 to 20 dB(A)	58	52	68	60	58	68	57	69
Highly intrusive	>25 dB(A)	25	23	34	25	29	41	24	38
Highly affected >75 dB(A)	-	2	1	7	2	3	9	2	8

Table E1.4 Summary of exceedences (number of residential receivers) for Standard Hours - Travers Street Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<-5 dB(A) below NML	62	28	120	67	87	165	41	148
Noticeable	-5 to 0 dB(A) below NML	12	9	30	16	19	50	9	38
Clearly audible	0 to 10 dB(A)	4	3	4	4	4	3	4	4
Moderately intrusive	10 to 20 dB(A)	0	0	0	0	0	1	0	0
Highly intrusive	>20 dB(A)	9	9	9	9	9	9	9	9
Highly affected >75 dB(A)	-	62	28	120	67	87	165	41	148

Table E1.5 Summary of exceedences (number of residential receivers) for OOHW Period 1 - Travers Street Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<NML	2143	2222	1909	2109	2040	1822	2187	1844
Noticeable	0 to 5 dB(A)	180	141	337	205	252	365	161	368
Clearly audible	5 to 15 dB(A)	68	30	142	76	97	200	44	175
Moderately intrusive	15 to 20 dB(A)	4	3	6	5	6	6	3	6
Highly intrusive	>25 dB(A)	1	0	2	1	1	3	1	3
Highly affected >75 dB(A)	-	9	9	9	9	9	9	9	9

Table E1.6 Summary of exceedences (number of residential receivers) for OOHW Period 2 – Travers Street Intersection work area

Noise Impact Category	Range above NML dB(A)	Sc.1	Sc.1A	Sc.1B	Sc.1C	Sc.1D	Sc.1E	Sc.1F	Sc.1G
Complying	<NML	1786	1839	1674	1769	1733	1619	1807	1648
Noticeable	0 to 5 dB(A)	338	366	218	321	290	188	362	178
Clearly audible	5 to 15 dB(A)	251	172	466	281	344	523	208	518
Moderately intrusive	15 to 20 dB(A)	16	15	31	20	22	58	15	44
Highly intrusive	>25 dB(A)	5	4	7	5	7	8	4	8
Highly affected >75 dB(A)	-	9	9	9	9	9	9	9	9

APPENDIX F

CVNG Appendix B – Standard Mitigation Measures

Appendix B – Standard mitigation measures

The following standard actions and mitigation measures should be implemented on all construction projects. Note that assistance from Roads and Maritime Communication and Stakeholder Engagement is available to coordinate and deliver community consultation and notification. The team also has the latest noise fact sheets and letter templates.

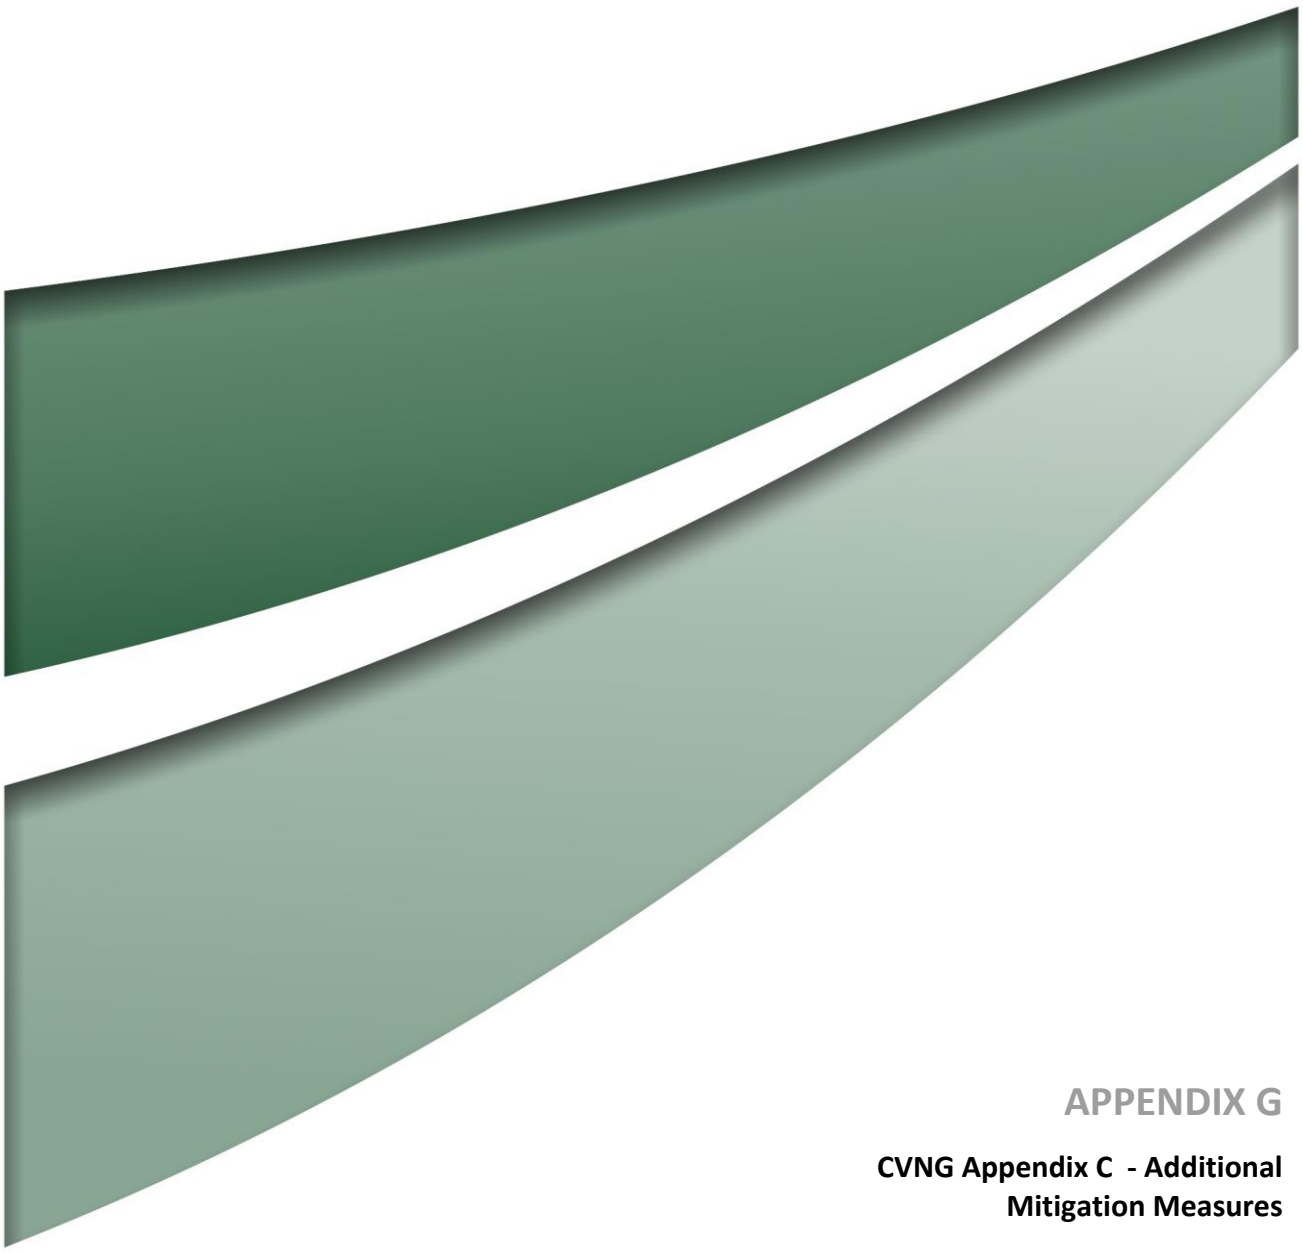
Action required	Applies to	Details
Management measures		
Implementation of any project specific mitigation measures required.	Airborne noise	Implementation of any project specific mitigation measures required.
Implement community consultation or notification measures (refer to Appendix C for further details of each measure).	Airborne noise. Ground-borne noise & vibration.	Notification detailing work activities, dates and hours, impacts and mitigation measures, indication of work schedule over the night time period, any operational noise benefits from the works (where applicable) and contact telephone number. Notification should be a minimum of 7 calendar days prior to the start of works. For projects other than maintenance works more advanced consultation or notification may be required. Please contact Roads and Maritime Communication and Stakeholder Engagement for guidance. Website (If required) Contact telephone number for community Email distribution list (if required) Community drop in session (if required by approval conditions).
Site inductions	Airborne noise. Ground-borne noise & vibration	All employees, contractors and subcontractors are to receive an environmental induction. The induction must at least include: • all project specific and relevant standard noise and vibration mitigation measures • relevant licence and approval conditions • permissible hours of work • any limitations on high noise generating activities • location of nearest sensitive receivers • construction employee parking areas • designated loading/unloading areas and procedures • site opening/closing times (including deliveries) • environmental incident procedures.
Behavioural practices	Airborne noise	No swearing or unnecessary shouting or loud stereos/radios on site. No dropping of materials from height, throwing of metal items and slamming of doors.

Action required	Applies to	Details
Verification	Airborne noise Ground-borne noise & vibration	Where specified under Appendix C a noise verification program is to be carried out for the duration of the works in accordance with the Construction Noise and Vibration Management Plan and any approval and licence conditions.
Attended vibration measurements	Ground-borne vibration	Where required attended vibration measurements should be undertaken at the commencement of vibration generating activities to confirm that vibration levels are within the acceptable range to prevent cosmetic building damage.
Update Construction Environmental Management Plans	Airborne noise. Ground-borne noise & vibration.	The CEMP must be regularly updated to account for changes in noise and vibration management issues and strategies.
Building condition surveys	Vibration Blasting	Undertake building dilapidation surveys on all buildings located within the buffer zone prior to commencement of activities with the potential to cause property damage
Source controls		
Construction hours and scheduling.	Airborne noise. Ground-borne noise & vibration.	Where feasible and reasonable, construction should be carried out during the standard daytime working hours. Work generating high noise and/or vibration levels should be scheduled during less sensitive time periods.
Construction respite period during normal hours and out-of-hours work	Ground-borne noise & vibration. Airborne noise.	Please refer to Appendix C for more details on the following respite measures: • Respite Offers (RO) • Respite Period 1 (R1) • Respite Period 2 (R2) • Duration Respite (DR)
Equipment selection.	Airborne noise. Ground-borne noise & vibration	Use quieter and less vibration emitting construction methods where feasible and reasonable. For example, when piling is required, bored piles rather than impact-driven piles will minimise noise and vibration impacts. Similarly, diaphragm wall construction techniques, in lieu of sheet piling, will have significant noise and vibration benefits. Ensure plant including the silencer is well maintained.

Action required	Applies to	Details
Plant noise levels.	Airborne-noise.	The noise levels of plant and equipment must have operating Sound Power or Sound Pressure Levels compliant with the criteria in Appendix H. Implement a noise monitoring audit program to ensure equipment remains within the more stringent of the manufacturers specifications or Appendix H.
Rental plant and equipment.	Airborne-noise.	The noise levels of plant and equipment items are to be considered in rental decisions and in any case cannot be used on site unless compliant with the criteria in Table 2.
Use and siting of plant.	Airborne-noise.	The offset distance between noisy plant and adjacent sensitive receivers is to be maximised. Plant used intermittently to be throttled down or shut down. Noise-emitting plant to be directed away from sensitive receivers. Only have necessary equipment on site.
Plan worksites and activities to minimise noise and vibration.	Airborne noise. Ground-borne vibration.	Locate compounds away from sensitive receivers and discourage access from local roads. Plan traffic flow, parking and loading/unloading areas to minimise reversing movements within the site. Where additional activities or plant may only result in a marginal noise increase and speed up works, consider limiting duration of impact by concentrating noisy activities at one location and move to another as quickly as possible. Very noise activities should be scheduled for normal working hours. If the work can not be undertaken during the day, it should be completed before 11:00pm. Where practicable, work should be scheduled to avoid major student examination periods when students are studying for examinations such as before or during Higher School Certificate and at the end of higher education semesters. If programmed night work is postponed the work should be re-programmed and the approaches in this guideline apply again.
Reduced equipment power	Airborne noise. Ground-borne vibration.	Use only the necessary size and power

Action required	Applies to	Details
Non-tonal and ambient sensitive reversing alarms	Airborne noise.	Non-tonal reversing beepers (or an equivalent mechanism) must be fitted and used on all construction vehicles and mobile plant regularly used on site and for any out of hours work. Consider the use of ambient sensitive alarms that adjust output relative to the ambient noise level.
Minimise disturbance arising from delivery of goods to construction sites.	Airborne noise.	Loading and unloading of materials/deliveries is to occur as far as possible from sensitive receivers. Select site access points and roads as far as possible away from sensitive receivers. Dedicated loading/unloading areas to be shielded if close to sensitive receivers. Delivery vehicles to be fitted with straps rather than chains for unloading, wherever possible. Avoid or minimise these out of hours movements where possible.
Blasting regime	Airborne noise. Ground-borne vibration.	The noise and vibration impacts of blasting operations can be minimised by: • Choosing the appropriate blast charge configurations • Ensuring appropriate blast-hole preparation • Optimising blast design, location, orientation and spacing • Selecting appropriate blast times, and • Utilising knowledge of prevailing meteorological conditions. • AS 2187.2 Explosives-Storage, transport and use, Part 2: Use of Explosives provides more detailed advice on ground vibration and airblast overpressure impact minimisation options.
Engine compression brakes	Construction vehicles	Limit the use of engine compression brakes at night and in residential areas. Ensure vehicles are fitted with a maintained Original Equipment Manufacturer exhaust silencer or a silencer that complies with the National Transport Commission's 'In-service test procedure' and standard.
Path controls		

Action required	Applies to	Details
Shield stationary noise sources such as pumps, compressors, fans etc.	Airborne noise.	Stationary noise sources should be enclosed or shielded where feasible and reasonable whilst ensuring that the occupational health and safety of workers is maintained. Appendix D of AS 2436:2010 lists materials suitable for shielding.
Shield sensitive receivers from noisy activities.	Airborne noise.	Use structures to shield residential receivers from noise such as site shed placement; earth bunds; fencing; erection of operational stage noise barriers (where practicable) and consideration of site topography when situating plant.
Receptor controls		
Structural surveys and vibration monitoring	Ground-borne vibration.	Pre-construction surveys of the structural integrity of vibration sensitive buildings may be warranted. At locations where there are high-risk receptors, vibration monitoring should be conducted during the activities causing vibration.
See Appendix C for additional measures	Airborne noise. Ground-borne vibration.	In some instances additional mitigation measures may be required.



APPENDIX G

CVNG Appendix C - Additional Mitigation Measures

C.1 Overview of additional mitigation measures

After standard noise mitigation measures (Appendix B) have been applied noise levels may still exceed noise management levels. Where exceedances remain consider implementing the following approaches in Tables C.1 to C.3 where feasible and reasonable. Note that assistance from Roads and Maritime Communication and Stakeholder Engagement is available to coordinate and deliver community consultation and notification. The team also has the latest noise fact sheets and letter templates.

The range of additional measures in Tables C.1 to C.3 are described below. Note in instances where there are many receivers above the NML it may not be practical to discuss the project with every receiver recommended below. Instead the community should be proactively engaged so they have an incentive to participate in discussion. Support from the community may be demonstrated from surveys, online feedback, contact phone numbers and community events.

Notification (letterbox drop or equivalent)

Advanced warning of works and potential disruptions can assist in reducing the impact on the community. The notification may consist of a letterbox drop (or equivalent) detailing work activities, time periods over which these will occur, impacts and mitigation measures. Notification should be a minimum of 5 working days prior to the start of works. The approval conditions for projects may also specify requirements for notification to the community about works that may impact on them.

Specific notifications (SN)

Specific notifications are letterbox dropped (or equivalent) to identified stakeholders no later than seven calendar days ahead of construction activities that are likely to exceed the noise objectives. The specific notification provides additional information when relevant and informative to more highly affected receivers than covered in general letterbox drops.

The exact conditions under which specific notifications would proceed are defined in the relevant Additional Mitigation Measures (Tables C1 to C3). This form of communication is used to support periodic notifications, or to advertise unscheduled works.

Phone calls (PC)

Phone calls detailing relevant information made to identified/affected stakeholders within seven calendar days of proposed work. Phone calls provide affected stakeholders with personalised contact and tailored advice, with the opportunity to provide comments on the proposed work and specific needs. Where the resident cannot be telephoned then an alternative form of engagement should be used.

Individual briefings (IB)

Individual briefings are used to inform stakeholders about the impacts of high noise activities and mitigation measures that will be implemented. Project representatives would visit identified stakeholders at least 48 hours ahead of potentially disturbing construction activities. Individual briefings provide affected stakeholders with personalised contact and tailored advice, with the opportunity to comment on the project. Where the resident cannot be met with individually then an alternative form of engagement should be used.

Respite Offers (RO)

Respite Offers should be considered made where there are high noise and vibration generating activities near receivers. As a guide work should be carried out in continuous blocks that do not exceed 3 hours each, with a minimum respite period of one hour between each block. The actual duration of each block of work and respite should be flexible to accommodate the usage of and amenity at nearby receivers.

The purpose of such an offer is to provide residents with respite from an ongoing impact. This measure is evaluated on a project-by-project basis, and may not be applicable to all projects.

Respite Period 1 (R1)

Out of hours construction noise in out of hours period 1 shall be limited to no more than three consecutive evenings per week except where there is a Duration Respite. For night work these periods of work should be separated by not less than one week and no more than 6 evenings per month.

Respite Period 2 (R2)

Night time construction noise in out of hours period 2 shall be limited to two consecutive nights except for where there is a Duration Respite. For night work these periods of work should be separated by not less than one week and 6 nights per month. Where possible, high noise generating works shall be completed before 11pm.

Duration Respite (DR)

Respite offers and respite periods 1 and 2 may be counterproductive in reducing the impact on the community for longer duration projects. In this instance and where it can be strongly justified it may be beneficial to increase the work duration, number of evenings or nights worked through Duration Respite so that the project can be completed more quickly.

The project team should engage with the community where noise levels are expected to exceed the NML to demonstrate support for Duration Respite.

Where there are few receivers above the NML each of these receivers should be visited to discuss the project to gain support for Duration Respite.

Alternative Accommodation (AA)

Alternative accommodation options may be offered to residents living in close proximity to construction works that are likely to experience highly intrusive noise levels (Tables C1-C3). The specifics of the offer will be identified on a project-by-project basis. Additional aspects for consideration shall include whether the highly intrusive activities occur throughout the night or before midnight.

Verification

Please see Appendix F for more details about verification of Noise and Vibration levels as part of routine checks of noise levels or following reasonable complaints. This verification should include measurement of the background noise level and construction noise. Note this is not required for projects less than three weeks unless to assist in managing complaints.

C.1 Airborne noise

Shorter tem impacts

For calculated noise levels the tables show additional measures to be implemented for each receiver depending on how far above the background noise level or NML the impact is. These measures are most appropriate for shorter term works.

For distance based assessments the distances where additional mitigation measures should be implemented are identified by cross referencing the Mitigation Levels in Table C1 with the plant and Mitigation Levels in Table D2 and D3. Note this is automatically completed by the Estimator spreadsheet.

As an example using distance based methods consider a NML of 45dBA in OOHW Period 1 in Table C1 below. Letter box drops should be completed at Mitigation Levels greater than 50dBA (NML+5dBA). From Table D2 this corresponds to receivers at distances equal to or less than 340m for a concrete saw.

1.0 Executive summary

As background, DM McMahon Pty Ltd (McMahon) conducted a Preliminary Site Investigation (PSI) in 2021 at the proposed intersection upgrade of Travers Street and the Olympic Highway Wagga Wagga NSW (the site) as part of a risk assessment to future site users from potential contamination pertaining to historical land use of the site and surrounds (McMahon PSI 7493). The site is subject to a proposed upgrade by Transport for NSW (TfNSW) and is located at the southern end of the Gobbagombalin Bridge, which crosses the Murrumbidgee River. From the available information, previous land use is agricultural and commercial with Travers Street existing from at least 1891. The current intersection arrangement is a four-leg roundabout. The proposed upgrade will relocate the intersection further south to allow for two southbound lanes and the existing Travers Street connection is proposed to be removed. There are four potential ancillary facility areas: two surrounding the current roundabout and two to the east at 85 Travers Street (Toll Regional, freight and transport company). A map of the road alignment and ancillary areas can be seen in **Attachment A**.

The PSI recommended a Detailed Site Investigation (DSI) be carried out for future development owing to the sites and surrounds agricultural and commercial land use and the following potential contamination sources relative to the development being identified:

1. **Fill material including bulk fill, road base and asphalt.**
2. **Dumped rubbish.**
3. **Fuel and oil from machinery maintenance.**
4. **Emissions from vehicles.**
5. **Pesticides from agricultural land use.**
6. **Underground services, typically water pipes and comms boxes.**
7. **Irrigation of treated effluent.**

The purpose of this DSI is to identify the nature of the potential contamination and delineate its lateral and vertical extent to a sufficient degree that appropriate site management strategies can be devised, if required.

The scope of work includes:

- A desktop study to collect basic site information and identify the site characteristics.
- A site inspection with sampling using Data Quality Objectives (DQOs).
    - 15 systematic soil locations from the new Travers Street leg, T1 and T3. Samples were analysed for hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), heavy metals, phenols, pesticides (organochlorine and organophosphate), and asbestos.
    - 6 systematic soil locations from T5 and T6. Samples were analysed for heavy metals, pesticides, and volatiles.
    - 7 samples from a previous TfNSW geotechnical investigation were also analysed for heavy metals and asbestos.
    - Vapour screening at each sampling location.
- An assessment of the potential contamination source-pathway-receptor linkages.

- Interpretation of data collected to conduct a risk assessment as part of the conceptual site model for an assessment of site suitability for the proposed land use.

Findings of the investigation include:

- There is no gross soil contamination across the site from the identified potential contamination sources that would materially affect the proposed land use of the site with all results below the assessment criteria.
- The results of the investigation conclude that the identified historical potential contaminating land use is assessed to be of low significance in terms of risk to future site users and the site is suitable for the proposed upgrade.
- Management strategies for materials generated from and imported to the site as outlined in **Section 12.0** are recommended to be adopted during future development.
- A protocol for unexpected finds as outlined in **Section 13.0** has also been developed as part of this risk assessment framework if additional potential contamination sources are identified during development
- This executive summary and the findings of this PSI are subject to the limitations as stated in **Section 14.0**.

2.0 Objectives

The objective of this investigation is to:

- Provide information regarding potential contamination on site.
- Providing a factual record of the works completed and results.
- Undertaking a risk assessment for health risk to future site users and the environment.
- Provide a statement of recommendations for further investigation and/or ongoing site management or alternatively, suitability of the site for the proposed land use.
- To prepare the DSI in general accordance with the relevant guidelines and legislation, namely:
    - NSW EPA. Consultants Reporting on Contaminated Land: Contaminated Land Guidelines, (2020).
    - Transport for NSW Guideline for the Management of Contamination (Roads and Maritime Services, 2013).
    - State Environmental Planning Policy No 55 – Remediation of Land, (1998).
    - National Environment Protection (Assessment of Site Contamination) Measure (NEPM), (2013).

3.0 Scope of work

The scope of work includes the following:

- Review the available information regarding historical, current, and proposed land use of the site and surrounds.
- Review the environmental setting of the site and surrounds.
- Assess the potential contamination sources and Contaminants of Potential Concern (CoPCs).
- Assess the potential contamination source-pathway-receptor linkages from the CoPCs, environmental setting and land use.
- Formulate a Sampling, Analysis & Quality Plan (SAQP) to investigate the potential contamination based on the recommendations in the PSI.
- Conduct soil sampling across the site for the CoPCs.
- Collect soil samples for laboratory analysis of the CoPCs.
- Compare the laboratory and screening results against the adopted criteria.
- Evaluate Quality Assurance/Quality Control (QA/QC) data to assess the sampling and analysis procedure.
- Refine a Conceptual Site Model (CSM) to assess potential contamination risk from the source-pathway-receptor linkages.
- Provide a clear statement on site suitability for the proposed land use or the need for further investigation, remediation, and/or ongoing site management.

4.0 Site identification

The site identification can be seen as follows, **Table 1**.

Table 1: *Site identification*

Site	Details
Ancillary site 1 (T1) **Former RMS compound for Gobbagombalin Bridge construction**	**Real property description:** N/A **Centre coordinate:** 531746 6115867 MGA GDA z55 **Property size:** 4.28ha approximately **Local Government Area:** Wagga Wagga **Present use:** Agricultural **Present zoning**: SP2 – Infrastructure
Road alignment (T3) **Proposed relocation area for Travers Street**	**Real property description:** N/A **Centre coordinate:** 531908 6115731 MGA GDA z55 **Property size:** 3404m^2 approximately **Local Government Area:** Wagga Wagga **Present use:** Road reserve **Present zoning**: SP2 – Infrastructure
Ancillary site 5 (T5) **85 Travers Street**	**Real property description:** N/A **Centre coordinate:** 532317 6115841 MGA GDA z55 **Property size:** 4005m^2 approximately **Local Government Area:** Wagga Wagga **Present use:** Road reserve **Present zoning**: SP2 – Infrastructure
Ancillary site 6 (T6) **85 Travers Street**	**Real property description:** N/A **Centre coordinate:** 532448 6115840 MGA GDA z55 **Property size:** 2678m^2 approximately **Local Government Area:** Wagga Wagga **Present use:** Road reserve **Present zoning**: SP2 – Infrastructure

5.0 Site history

From research of land titles, Council records, EPA records, aerial photography, internet articles, and interviews with people who have historical knowledge of the site, the following site history is offered:

Historical owners

The Historical Lands Viewer was investigated for previous land owners. From 1902 to 1967, the maps show Phineas Hann as the owner of 19 acres at T5 and T6.

Council records

No Council records were located for the site.

Section 10.7

Section 10.7 Planning Certificates were not obtained for the site owing to the agricultural historical land use.

EPA records

There are no records on the Contaminated Land Record Database for the site pertaining to Preliminary Investigation Orders, Declaration of Significantly Contaminated Land, Approved Voluntary Management Plans, Management Orders, Ongoing Maintenance Orders, Repeal Revocation or Variation Notice, Site Audit Statement, or Notice of Completion or Withdrawal of Approved VMP. The site has not been "notified" to the EPA on the list of NSW Contaminated sites as of December 2021.

The nearby former Wiradjuri Landfill in Narrung Street, approximately 1km north east of the site is 'Under Assessment' whereby the contamination is being assessed by the EPA to determine whether regulation is required.

Aerial photographs

McMahon observed the following from a review of the available aerial photography.

T1

1944 – The site and surrounds are a paddock. An unpaved dual lane road follows Travers Street and curves south where the current roundabout sits. Buildings and intensive agriculture can be seen to the east and north east of the ancillary area.

1966 – There is no change to the site.

1971 – There is no change to the site. More buildings have been constructed at the property to the east of the site. Another dwelling can be seen to the north east of the site. The intensive agricultural land is now covered with trees.

1980 – There is no change to the site.

1990 – There is no change to the site. The building to the east seems to have been removed although some smaller structures remain. A building can be seen further east.

1995 – The roundabout connecting the Olympic Highway and Travers Street has been constructed. Work has begun on the Gobbagombalin Bridge. A potential site compound has

been set up in the south east corner of the site. Additional buildings can be seen to the east of the site, as well as two large dams.

1997 – The Gobbagombalin Bridge has been extended but does not connect to the roundabout as yet. A potential stockpile area has been cleared to the north of the roundabout.

1998 – The Gobbagombalin Bridge has connected to the roundabout at the Olympic Highway and Travers Street intersection. The potential site compound and stockpile area have been removed.

2007 – There is no change to the site, reflects current site conditions. The Wiradjuri Walking Track can be seen to the east of the site. Major development has occurred at the property to the east, including the construction of three large buildings and several smaller ones. One of the dams has been filled.

2009 – There is no change to the site, reflects current site conditions. Stockpiles can be seen to the east of the site. Further development has occurred at the property to the east.

2012 – The site is flooded as the Murrumbidgee River peaked at 10.56 metres.

2013 – No change, reflects current site conditions.

2014 – No change, reflects current site conditions.

2016 – No change, reflects current site conditions.

2017 – No change, reflects current site conditions.

2018 – No change, reflects current site conditions.

2019 – No change, reflects current site conditions.

2020 – No change, reflects current site conditions.

2021 – No change, reflects current site conditions.

T3

1944 – An unpaved dual lane road follows Travers Street and curves south through the western boundary of the road alignment. The Murrumbidgee Turf Club (established 1860) exists to the south of the site with the racetrack and golf course developed in 1865 and 1895, respectively.

1966 – The site has been largely cleared, with the corner of Travers Street (still unpaved) occupying the area. Unpaved roads appear on the Murrumbidgee Turf Club (MTC) site for access around the property.

1971 – There is no change to the site. Further development as occurred at the MTC.

1980 – There is no change to the site.

1990 – Travers Street now only passes through the eastern boundary of the site. The rest of the site is covered with vegetation. Further development has also occurred at the MTC.

1995 – The site is cleared. Travers Street now runs parallel to the site's northern boundary connecting to the roundabout to the site's north west. A horse tunnel under the Olympic Highway has been built to the site's south. Further development has occurred at the MTC.

1997 – No change, reflects current site conditions.

1998 – No change, reflects current site conditions.

2007 – No change, reflects current site conditions.

2009 – No change, reflects current site conditions.

2012 – The flood waters have not reached the site. There is no change to the site, reflects current site conditions.

2013 – No change, reflects current site conditions.

2014 – No change, reflects current site conditions.

2016 – No change, reflects current site conditions.

2017 – No change, reflects current site conditions.

2018 – No change, reflects current site conditions.

2019 – No change, reflects current site conditions.

2020 – No change, reflects current site conditions.

2021 – No change, reflects current site conditions.

T5 and T6

1944 – The site and surrounds are a paddock. An unpaved dual lane road follows Travers Street and includes ancillary areas T5 and T6. A small dam or depression can be seen to the north east of T5. The saleyards can be seen to the far east of the site. The sewage treatment plant (STP) can be seen to the north.

1966 – Travers Street has become a single lane road with the median strip removed, T5 and T6 are no longer included. It is still unpaved**.** A levee has been built to the east of the site surrounding the future Toll site. The Wiradjuri Landfill can be seen to the north east. Smoke can be seen as the landfill was burned.

1971 – A large building and paved area has been built to the east of T5 and T6. A levee has been built across T5 and T6, finishing at the eastern boundary of T6. A large dam can be seen to the north of the site.

1980 – There is no change to the site. Further development has occurred to the east. The saleyards have been removed. Construction has started for the sewage ponds at the STP to the north.

1990 – The dam/depression has been filled and covered. The levee has been moved to the north of T5 and T6, which are now part of the road reserve. Residential development has occurred to the east of the site. The landfill has been filled.

1995 – The Wiradjuri Pitch & Putt golf course has been constructed to the north east.

1997 – There is no change to the site, reflects current site conditions.

1998 – There is no change to the site, reflects current site conditions.

2007 – There is no change to the site, reflects current site conditions.

2009 – There is no change to the site, reflects current site conditions. The STP to the north has been upgraded and the ponds removed.

2012 – The flood waters have not reached the site due to the levee to the north. There is no change to the site, reflects current site conditions.

2013 – No change, reflects current site conditions.

2014 – No change, reflects current site conditions.

2016 – No change, reflects current site conditions.

2017 – No change, reflects current site conditions.

2018 – No change, reflects current site conditions.

2019 – No change, reflects current site conditions.

2020 – No change, reflects current site conditions.

2021 – No change, reflects current site conditions.

The aerial photographs can be seen in the PSI report (McMahon PSI 7493).

Internet search

T1

- The Gobbagombalin Bridge was officially opened 26 July 1997 (https://www.waggawaggaaustralia.com.au/visitor-information/history/history-timeline/)

T5

- A saddling yard was formed around 1865 at the corner of Travers and Beckwith Street as part of the Murrumbidgee Turf Club (Morris, 1999, *Wagga Wagga – A History*, pg.94)
- A nursery had been established in 1868 opposite the racecourse, while the Riverine Nursery at the corner of Beckwith and Travers Streets was established from the 1880's (Morris, 1999, *Wagga Wagga – A History*, pg.62)

Surrounding areas

Saleyards – approximately 1.4km east of the Travers Street roundabout

- In 1891, Council purchased the saleyards established by A. T. Bolton in Travers Street. By 1926, the holding capacity of the yards was approximately 70,000 sheep and 6,000 cattle. Land was purchased at Bomen in 1958 and the saleyards were moved and renamed Wagga Wagga Livestock Marketing Centre in 1977 (https://www.wwdhs.org.au/wagga-sale-yards-1936/)
- In the 1891 flood, only newly erected fences and those of a substantial nature were left standing. The saleyards did not appear to have suffered whilst almost every other fence in the vicinity was wrecked (*Wagga Wagga Advertiser,* Saturday 4 July 1891, http://nla.gov.au/nla.news-article101883071).

Narrung Street Sewage Treatment Plant – approximately 1km northeast of the Travers Street roundabout

- The Narrung Street Sewage Treatment Plant (STP) was commissioned in 1914 as a simple septic tank to service the town. By 1953, extensive works were required to upgrade the facility to keep up with the demands of the city. In the late 1960's, the tertiary ponds were extensively remodelled to polish the final discharge before entering the Murrumbidgee River. After an upgrade to the STP in 2010, the ponds were no longer required and were developed into a wetland. The Marrambidya Wetlands officially opened in 2016 (https://wagga.nsw.gov.au/parks-and-recreation/parks-beaches-lakes/marrambidya-wetland/the-project)

Wiradjuri Landfill – approximately 1km northeast of the Travers Street roundabout

- The Wiradjuri Landfill commenced operations between 1953 and 1966. Dumped rubbish was burned and then rough covered, leaving a mound. By 1971, complaints about the smoke, dust and smell led to the purchase of a small front-end loader so that a tip and fill method of garbage disposal could be used instead (Morris, 1999, *Wagga Wagga – A History*, pg.239)
- It is estimated the landfill accepted domestic, municipal, commercial and industrial wastes, wastes from the nearby sewage treatment works and possibly animal wastes from the nearby saleyards. The landfill ceased operations around the late 1980's (Coffey Geosciences Pty Ltd, 2006, *Landfill Gas and Contamination Assessment*. Report No. E14552/1-AL).
- The Wiradjuri Pitch & Putt Golf Centre was opened between 1990 and 2001 on the site of the old landfill (Coffey). The Council took over the course in 1994 (https://www.wwdhs.org.au/28th-december-2019-in-waggas-past-25-and-50-years-ago/)
- In 1996, Council acquired eight properties along Wiradjuri Crescent, owing to contamination being identified on the rear of the lots from the adjoining former landfill. Remediation works in 1997 included shortening the length of the residential lots on the western boundary by about 9m and construction of a gas interception trench along the western part of the newly former boundaries. Council leased the properties for residential use before and after remediation.
- There is a lack of details regarding the operation of the landfill and its closure, including any surface capping. A contamination assessment report by Coffey in 2006 indicated that the site generally has a low likelihood of having contamination that would preclude ongoing residential land use subject to: a suitable monitoring program that includes checking for potential gas migration; that the groundwater below the site should not be used for any beneficial re-use as the quality has not been assessed; and that construction of certain subsurface structures such as basements should be precluded or appropriate measures incorporated to reduce the potential for gas accumulation. (Coffey Geosciences Pty Ltd, 2006, *Landfill Gas and Contamination Assessment*. Report No. E14552/1-AL).

6.0 Site condition and surrounding environment

McMahon notes the following observations of the site condition as part of this PSI.

T1 is outside of the Main City Levee Bank on the Murrumbidgee River floodplain. The site is currently grazing land but has previously been used as a site compound when the Gobbagombalin Bridge was constructed. There is evidence of fill material on site and historical machinery maintenance is possible. Some dumped rubbish was observed. Underground services are present. A thorough inspection of the site surface was hampered by thick grass.

T3 is within the Main City Levee and is within the road reserve. Travers Street used to follow the alignment of T3 prior to the Gobbagombalin Bridge being built. Stormwater run-off from Travers Street and Moorong Street is likely. Agricultural land use prior to the current land use is likely. Underground services are present. McMahon attended a geotechnical investigation of the construction footprint of the Travers Street intersection upgrade on 15 April 2021. Subsurface conditions were fill material comprising of natural soil and aggregate. Some buried asphalt was noted along the old Travers Street alignment.

T5 and T6 are within the Main City Levee Bank and are maintained nature strips at the front of the Toll Group site. Irrigation of the lawn using treated effluent from the Narrung Street Sewage Treatment Plant is known. Stormwater run-off from Travers Street and the Toll Group hardstand is likely. Agricultural land use prior to the current land use is likely. Underground services are present. A thorough inspection of the site surface was hampered by thick grass.

McMahon attended a geotechnical investigation of the construction footprint of the Travers Street intersection upgrade on 15 April 2021. Subsurface conditions were fill material comprising of natural soil and aggregate. Select soil samples were taken from the TfNSW sample points 17/12, 17/13, 17/16, 17/17 and 17/18 for future analysis. Seven samples were tested for heavy metals and asbestos as part of this DSI.

A summary of the site environmental setting is as follows.

Topography

The Wagga Wagga Topographic Map (8327-1N) indicates that the site is located at an elevation range of approximately 179-182m AHD. The natural landform has very low relief and is a level to very gently inclined alluvial floodplain of the Murrumbidgee River. Built infrastructure lies on top of the natural landform consisting of Travers Street and the associated road reserve, the Main City Levee Bank and filled commercial land.

Vegetation

T1 is used for grazing modified pasture.

T3 is covered with annual grass and broadleaf species, as well as some scattered trees.

T5 and T6 are covered with maintained lawn.

Natural Resources Sensitivity

A search of the WWCC online mapping found that all sites are in a natural resource sensitivity area for groundwater vulnerability. Parts of T1, T3, T5 and T6 also in an identified area of biodiversity, WWCC (2020).

Weather

The average rainfall for Wagga Wagga is approximately 525mm per annum, with the wettest months being October, June and July respectively. Wagga Wagga is characterised by cold wet winters and hot dry summers.

Hydrology

The site lies within the lower reaches of the West Wagga Wagga catchment on the Murrumbidgee River floodplain. The Main City Levee Bank that runs along Travers Street offers protection to the subject site against a 1 in 100-year flood event, apart from one ancillary area which is located to the north of the levee. The sites that are within the levee have a highly altered run off regime owing to the Council stormwater system.

Soil & Landform

The site lies within the Kurrajong Plain (kp) mapping unit from the Soil Landscapes of the Wagga Wagga 1:100 000 Sheet, (DLWC 1997). The map unit kp is described as high floodplain of Murrumbidgee River. Natural soils are moderately deep (80 - 150 cm) Eutrophic Brown Dermosols and Eutrophic Brown Kandosols.

Geology & Regolith

Natural alluvial deposition is thick (mostly >20 m) Cainozoic alluvial sediment sequences, silty clay on top 5 - 8m and sand, gravel and clay at depth.

Hydrogeology

The hydrogeology beneath the site is characterised by the Cowra formation that is nearest to the surface with around 5-15m of clay overlying interbedded sand, silt, gravel and clays. The Cowra formation varies in thickness from 15 to 35m with the Lachlan formation residing underneath. There is a localised low level of connection between the surface and groundwater which is consistent with the characteristic of the area. Flow gradients in the Cowra formation are likely to be in a north westerly direction towards the river, NSW DPI (2017).

From the available information, groundwater is likely to be intersected within 12m of the surface and groundwater levels are likely to fluctuate from around 8m to 15m dependant on seasonal conditions.

7.0 Sampling and analysis quality plan and sampling methodology

The Data Quality Objectives (DQOs) of the site assessment have been developed to define the type and quality of data to meet the project objectives. The DQOs have been developed generally in accordance with the seven step DQO process as outlined in AS 4482.1:2005 and the USA EPA: Guidance on Systematic Planning Using the Data Quality Objectives Process (2006a). These DQO's are as follows:

1. **The problem**
2. **The goal of the study**
3. **Information inputs**
4. **Study boundaries**
5. **The analytical approach**
6. **Performance and acceptance criteria**
7. **Obtaining data**

These objectives have been further outlined in the following sections.

DQO 1 - The problem

Potential contamination from previous land use may be present across the site and insufficient data relating to this source is available to determine land use suitability with the necessary level of confidence.

DQO 2 - The goal of the study

Goals of the study include:

- Undertake intrusive investigations based on the data gaps to determine if there is contamination within fill and soils associated with the identified contamination sources.
- Determine if any contamination, should it be identified, poses a risk to current and/or future receptors at the site or within potential exposure pathways from the site.
- Determining whether the site is currently, or can be made, suitable for the proposed development regarding contamination.

DQO 3 - Information inputs

- Desktop data including site inspections, site condition, history, geology, hydrogeology, fill, and soil analysis to characterise the site.
- Observational data including visual and olfactory conditions obtained from the proposed sampling.
- Vapour screening for Volatile Organic Compounds (VOCs) using a Photo-Ionisation Detector (PID).
- Analytical data relative to assessment criteria.

DQO 4 - Study boundaries

- Intrusive investigation across the site.
- Temporal boundaries are limited to the proposed fieldwork timeframes in the first quarter of the year 2022.

DQO 5 - The analytical approach

Samples will be tested against the following potential contamination sources

- Fill material including bulk fill, road base and asphalt.
- Dumped rubbish.
- Fuel and oil from machinery maintenance.
- Emissions from vehicles.
- Pesticides from agricultural land use.
- Underground services, typically water pipes and comms boxes.
- Irrigation of treated effluent.

DQO 6 - Performance and acceptance criteria

Specific limits for the investigation are in accordance with the appropriate guidance made or endorsed by state and national regulations, appropriate indicators of data quality, and industry standard procedures for field sampling and handling. To assess the validity of data for decision making, the data is assessed against a set of data quality indicators, the following predetermined data quality indicators have been adopted.

The key decision rules for the investigation are:

1) Has the analytical data been collected as part of the testing and met the data quality indicators? If they have then the data can be used to answer the decision rule/s and the decision statements developed in Step 2 of the DQOs. If not, then the need to collect additional data may be required.
2) Do contaminant concentrations exceed the investigation and screening criteria? If not, then the potential contamination does not pose an above low level of risk. Where results exceed the investigation and screening criteria, this may indicate an unacceptable level of risk. Further risk assessment and investigations may be warranted to determine the potential for impacts.

The key decision errors for the investigation are:

i. deciding that fill and soil on site is contaminated when it truly is not, and
ii. deciding that fill and soil on site is not contaminated when it truly is.

The true state of nature for decision error (i) is that fill and soil is not contaminated.
The true state of nature for decision error (ii) is that fill and soil is contaminated.

The site assessment criteria were specifically derived and incorporate the following:

- The samples are not composited so as the direct reading of contaminant levels will be found from each sample point on which an appropriate decision can be based off.
- QA/QC duplicate should have a Relative Percentage Difference (RPD) of <30%.
- Rinsate samples should return negligible concentrations for all parameters tested to ensure an appropriate sampling and decontamination procedure.
- If contaminant levels exceed the Tier 1 and statistical assessment criteria further investigation and assessment may be required.
- Specific Tier 1 assessment criteria can be seen below, **Table 2**.

- Recreational/open space was selected as the assessment criteria as it is the most conservative criteria and is consistent with the current land use.

Table 2: *Assessment criteria*

Material	Analytes	Criteria
Soil/fill	Hydrocarbons Solvents Phenols Pesticides Heavy metals	**Health Investigation Levels (HILs)** **-**Recreational C NEPM (2013) -Table 1A(1) Heavy metals and OCPs, OPPs. -Soils within 3m of surface **Health Screening Levels (HSLs) for vapour intrusion** -Recreational C NEPM (2013) -Table 1A(3) TRH (F1 & F2) and BTEX - 0m to <1m depth -Clay soil **Added Contaminants Limits (ACLs)** -Urban residential/public open space NEPM (2013) -Table 1B(1) Zinc -Table 1B(2) Copper -Table 1B(3) Nickel -Table 1B(4) Lead -Soils within 2m of surface -pH of 6.0 ($CaCl_2$) assumed from local knowledge -CEC of 10 assumed from local knowledge **Environmental Investigation Levels (EILs)** -Urban residential/public open space NEPM (2013) -Table 1B(5) Arsenic, DDT and naphthalene -Soils within 2m of surface **Ecological Screening Levels (ESLs)** -Urban residential/public open space NEPM (2013) -Table 1B(6) TRH (F1-F4) and BTEX -Soils within 2m of surface
Soil/fill	Asbestos	Analytical method used for presence/absence of free fibres. No visible asbestos on the soil surface.
Vapour screening	VOCs (from PID)	20.0ppm (based on similar sites and previous consultant experience).

The Tier 1 assessment criteria are used as an initial screening of the data to determine whether further assessment is required. Where above criteria exceedance indicates a risk to human health or the environment, site specific risk assessment, management or remediation will be recommended as appropriate.

DQO 7 - Obtaining data

The sampling pattern and strategy identifies the occurrence of potential contamination for suitable site characterisation. The sampling pattern and strategy has been devised based on site history, land uses, aerial imagery, site inspections, previous investigations and the NEPM (2013). The sampling pattern has been described in more detail below.

Sampling strategy and pattern

A systematic sampling pattern has been chosen based on potential contamination sources, previous land use, and requirements to delineate potential contamination. The adopted sampling pattern is suitable to make a quantitative statement about the level of confidence regarding the quality and accuracy of results. McMahon assesses that the sampling pattern is suitable to be used for decision making and site characterisation.

Key features of the sampling pattern include:

- 15 systematic soil locations from the new Travers Street leg, T1 and T3. Samples were analysed for hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), heavy metals, phenols, pesticides (organochlorine and organophosphate), and asbestos.
- 6 systematic soil locations from T5 and T6. Samples were analysed for heavy metals, pesticides and volatiles.
- 7 samples from a previous TfNSW geotechnical investigation were also analysed for heavy metals and asbestos.
- Vapour screening at each sampling location.
- Two duplicate samples.
- One rinsate sample.

By reference to the DQOs, a map of the sampling locations can be seen in **Attachment B**.

Sampling design justification

The following table presents a summary of the sampling locations and rationale behind their selection, **Table 3**.

Table 3: *Sampling rationale*

Sample location	Material	Rationale
1-15	Natural soil/fill	To assess the near surface and subsoil contamination from the new Travers Street leg, T1 and T3 from potential persistent agricultural chemicals and contaminants from commercial land use.
16-21	Natural soil	To assess the near surface and subsoil contamination from T5 and T6 from potential persistent agricultural chemicals and the potential irrigation of treated effluent.

The seven sampling locations from the previous TfNSW geotechnical investigation (Ref: GSW19017/A01) were chosen and sampled by TfNSW in April 2021. These sampling locations are identified as follows:

- 17/12B and 17/12C
- 17/16B and 17/16C
- 17/17A and 17/17B
- 17/18A and 17/18C

Failure to meet objectives procedure

If the procedures undertaken do not satisfy the expected data quality objectives, a review of the SAQP will be conducted prior to any further works.

Sampling and analysis methodology

The sampling officer wore unused disposable nitrile gloves to extract samples directly from the excavated pit to place into Teflon lined glass sample jars for chemical analytes and zip lock plastic bags for asbestos. Collected sample containers were placed into a chilled esky for preservation prior to analysis. All in-field observations and any relevant comments are detailed in the field sheets and a Chain of Custody form was produced to accompany the samples to the laboratory.

Soil sampling standards

Soil sampling and soil descriptions were undertaken by reference to:

- AS 4482.1:2005 - Guide to the investigation and sampling of sites with potentially contaminated soil Part 1: Non-volatile and semi-volatile compounds.
- AS 4482.2:1999 - Guide to the sampling and investigation of potentially contaminated soil Part 2: Volatile substances.
- WA Department of Health (2009) - Guidelines for the Assessment, Remediation and Management of Asbestos Contaminated Sites in Western Australia.
- AS 1726:2017 – Geotechnical Site Investigations.

Vapour screening method

Fill and soil samples were screened in-situ with a portable PID device with a 10.6eV gas discharge lamp for screening of Volatile Organic Compounds (VOCs). The 10.6eV lamp is assessed to be appropriate for VOCs screening and is recommended unless compounds that require a 10.6 eV lamp dominate the emissions scenario, RAE Systems (2016). The PID was calibrated to a known concentration (92ppm) of iso-butylene gas before use, the calibration certificate can be seen in **Attachment C**.

Prior to screening locations, the PID and its sample train were submitted to a leak detection test undertaken by a suitably qualified person. Between each sampling point, fresh air sampling of the probe and sample train was undertaken to ensure representative samples are obtained from each sample point.

8.0 Results

Sampling for this DSI was conducted over one day 24 January 2022. The weather was fine and sunny. A summary of the field observations and sample analytical results are as follows.

Site surface

- The site surface around the new Travers Street leg and T3 was annual grasses, perennial grasses, and weeds. T5 and T6 are covered with maintained lawn.
- There were no visual or olfactory indicators of chemical contamination on the surface across all sites.
- No asbestos containing material was observed across all sites.

Soil and fill

General profile observations are:

- The natural soil consisted of generally brownish silty sandy clay.
- The fill material generally consisted of clayey material with some gravel addition.
- Sample Point 1 surface area has some remnants of asphalt, potentially from a previous project.
- There were no visual or olfactory indicators of chemical contamination in the fill or soil.
- There was no asbestos containing material observed in the fill or soil.

Soil analysis

1. **Fill material including bulk fill, road base and asphalt.**
    - Hydrocarbons are below LORs and the adopted criteria.
    - Solvents are below LORs and the adopted criteria.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Asbestos is below the LORs and the adopted criteria.

2. **Commercial land use** – including potential machinery maintenance, dumped rubbish and emissions from vehicles.
    - Hydrocarbons are below LORs and/or the adopted criteria.
    - Solvents are below LORs and the adopted criteria.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Phenols are below LORs and the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.
    - Asbestos is below the LORs and the adopted criteria.

3. **Pesticides from agricultural land use.**
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.

4. **Underground services**.
    - Asbestos is below the LORs and the adopted criteria.

4. **Irrigation of treated effluent**.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.

Tabulated results can be seen in **Attachment D**.

Laboratory reports can be seen in **Attachment E**.

Vapour screening

- Soil vapour results from the PID screening returned results below the adopted criteria of 20.0ppm.

9.0 Quality assurance/quality control data evaluation

To assess the validity of data for decision making, the data has been assessed against a set of Data Quality Indicators (DQIs), the following predetermined DQIs have been adopted, **Table 4** and **Table 5**.

Table 4: *Sampling Data Quality Indicators*

Adopted practices	Completeness	Comparability	Representativeness	Precision	Accuracy
Details of sampling team – David McMahon (Experienced consultant) and Zach Delaney (experienced sampling officer).	✓	✓			
Reference to sampling plan/method, including any deviations from it – sampling and analysis quality plan.	✓				
Decontamination procedures carried out between sampling events.			✓	✓	✓
Logs for each sample collected, including date, time, location (with GPS coordinates), sampler, duplicate samples, chemical analyses to be performed, site observations and weather/environmental (i.e. surroundings) conditions. Include any diagrams, maps, photos.		✓	✓		
Chain of Custody fully identifying – for each sample – the sampler, nature of the sample, collection date, analyses to be performed, sample preservation method, departure time from the site and dispatch courier(s) (where applicable).	✓	✓			
Field quality assurance/quality control results (rinsate).				✓	✓
Statement of duplicate and other QAQC sample frequencies – 1 per 20 samples for duplicates, 1 per sampling event for rinsate.			✓	✓	
Field instrument calibrations (when used) with supporting documentation.				✓	✓
Sampling devices and equipment appropriate to sampling requirements.	✓	✓			

Table 5: *Analysis Data Quality Indicators*

Adopted practices	Completeness	Comparability	Representativeness	Precision	Accuracy
A copy of signed Chain of Custody forms acknowledging receipt date and time, and identity of samples included in shipments.	✓	✓			
Analytical methods used, including any deviations.	✓	✓			
Calculation of Relative Percentage Difference for duplicate comparison.	✓	✓			✓
Laboratory accreditation for analytical methods used, also noting any methods used which are not covered by accreditation.	✓			✓	
Surrogates and spikes used throughout the full method process, or only in parts. Results are corrected for the recovery.	✓	✓			
A list of what spikes and surrogates were run with their recoveries and acceptance criteria.		✓			✓
Practical quantification limits (PQL).	✓	✓			
Laboratory duplicates and rinsate results.	✓				✓
Evaluation of all quality assurance/control information listed above against the stated data quality objectives, including a quality assurance/control data evaluation.	✓	✓	✓	✓	✓

Data quality objectives

The soil duplicate sample (8338/D1) was taken adjacent to Sample Point 17/12 and returned an average Relative Percent Difference (RPD) of less than 30% for all analytes except for lead and nickel.

The soil duplicate sample (8338/D2) was taken adjacent to Sample Point 17/17 and returned an average Relative Percent Difference (RPD) of less than 30% for all analytes except for lead.

The RPD exceedance is of limited reliability where both the duplicate and its reference sample record concentrations less than ten times the limits of the assessment criteria. This exceedance is not considered to affect the outcomes of the investigation findings.

The soil sampling rinsate sample returned results less than the LOR.

The seven samples taken from the previous TfNSW geotechnical investigation exceeded the holding times for analysis. Owing to the persistent nature of heavy metals and pesticides in the environment, McMahon assesses that this does not affect the reliability of the results.

In consideration of the adopted QA/QC procedures and the results from their subsequent analysis, McMahon assesses the QA/QC results are suitable for the investigation undertaken and reflect the analytical data is of a suitable quality to determine contamination risk with an appropriate level of confidence.

10.0 Conceptual site model

A conceptual site model (CSM) is a representation of site-related information regarding contamination sources, receptors and exposure pathways between those sources and receptors and is presented and follows.

Summary

The sites have a historical agricultural and commercial land use. The potential contamination sources are persistent material and chemicals that may have accumulated in the fill material and natural soil from previous land uses. Improvements and underground services also are a potential contamination source if they contain hazardous materials. There is limited likelihood of soil contact for future site users or construction workers on the ancillary sites. Soil contact for construction workers within T3 is likely. Groundwater is deep (>8m) and is unlikely to be intercepted during development.

Potential and known sources of contamination

Based on an assessment of the information collated as part of the PSI, the following potential sources of contamination and contaminants of concern have been identified, **Table 6**.

Table 6: *Potential contamination sources and contaminants of concern*

Location	Contaminant source	Potential contaminants of concern
T1 T3	Fill material including bulk fill, road base and asphalt.	Hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), heavy metals and asbestos containing material (ACM).
T1	Dumped rubbish.	Hydrocarbons, solvents, heavy metals, and ACM.
T1	Fuel and oil from machinery maintenance.	Hydrocarbons, solvents, heavy metals, and phenols.
All sites	Emissions from vehicles.	Hydrocarbons, solvents, heavy metals, and phenols.
All sites	Pesticides from agricultural land use.	Heavy metals and pesticides (organochlorine and organophosphate).
All sites	Underground services, typically water pipes and comms boxes.	ACM.
T5 T6	Irrigation of treated effluent.	Heavy metals and pesticides.

Mechanism of contamination

The mechanism of contamination from the potential sources is predominantly top-down vertical and lateral migration into soil, fill and groundwater.

Potentially affected environmental media

- Soil.
- Fill.
- Soil vapour.
- Groundwater.

Consideration of spatial and temporal variations

Spatial and temporal variation in potential contamination is possible with attenuation of volatile contaminants likely.

Actual or potential exposure pathways

- Short term direct soil contact from construction workers during the road construction or maintenance workers following construction.
- Inhalation of dust, vapour or fibres by construction workers, maintenance workers, road users, nearby residents and recreational users.
- Down gradient ecological receptors such as the Murrumbidgee River.
- Direct groundwater contact but groundwater is deep (>8m) and unlikely to be contacted.

Human and ecological receptors

- Future construction workers or maintenance workers.
- Future road users.
- Current and future rural, commercial, and residential users of adjacent land.
- Recreational users of adjacent land.

Frequency of exposure

- Construction and maintenance workers are assessed to be a short-term exposure risk.
- Future road users, adjacent site users and recreational users are assessed to have a medium to long-term exposure risk, however the potential for exposure once the road is constructed is minimal.
- Future groundwater users are a medium to long-term exposure risk.
- Ecological receptors are assessed to be a medium to long-term exposure risk.

Source pathway receptor linkage assessment

- Construction and maintenance workers will have limited risk of contact with potentially contaminated soil as it is expected that workers adopt appropriate safety controls.
- Future road users or adjacent site users have limited risk of contact with dust, fibres or potentially contaminated soil as the road will act as a barrier. However, during construction exposure is possible.

- Groundwater use or interception is unlikely as the site and surrounds are connected to reticulated town water and no domestic groundwater bores exists on site.
- There is a risk to down gradient ecological receptors from the migration of potentially contaminated surface water and groundwater if gross soil contamination is found.

Discussion of multiple lines of evidence

A multiple lines of evidence approach is the process for evaluating and integrating information from different sources of data and uses best professional judgement to assess the consistency and plausibility of the conclusions which can be drawn, NEPM (2013).

11.0 Site characterisation

From the assessment undertaken the following conclusion can be drawn in relation to site characterisation.

Contamination in the surficial fill and natural soil

- Gross fill or soil contamination was not encountered onsite that would materially affect the proposed land use.
- All analytes tested are below the adopted criteria.
- Aesthetic issues are assessed to be low given the proposal to landscape the road reserve once works are complete and reinstate the ancillary areas to the current condition.

Contamination in groundwater

- No groundwater was encountered to the investigated depth.
- The results of the soil investigation and laboratory analysis indicate an absence of gross chemical contamination; therefore, groundwater investigation is not considered warranted due to the low risk of contamination.
- The site presents a low groundwater contamination risk to current and future site users as direct contact is unlikely and there is no known domestic use on or downgradient of the site.

Contamination in surface water

- There is no surface water on site nor known nearby sensitive aquatic receptors.
- Based on the chemical results, there is low likelihood of contaminated run-off from the site that would impacts surface waters.

12.0 Conclusions and recommendations

This investigation met the objective of investigating and assessing potential contamination that may affect the suitability of the site for the proposed land use and assess the need for further investigation or site management strategies.

The results of the investigation conclude that the identified historical potential contaminating land use is assessed to be of low significance in terms of risk to future site users and the site is suitable for the proposed upgrade.

Unexpected finds are possible during the development and can be managed under an unexpected finds protocol as outlined in **Section 12.0**. These unexpected finds include but are not limited to:

- Buried or surface bonded asbestos containing material, asbestos fines/friable asbestos.
- Underground services containing asbestos.
- Building waste and rubbish.
- Buried organic materials.
- Stained or deleterious fill and soils.
- Malodorous fill and soils.
- Ashy deposits

TfNSW or the designated contractor is responsible for tracking the soil and fill material on and off site and the following site management is recommended:

- Material generated from the site:
    - The underlying natural subsoil meets the Virgin Excavated Natural Material classification and can be handled accordingly.
    - The surficial fill material requires assessment against the NSW EPA (2014) Excavated Natural Material characterisation and any material that does not meet this characteristion requires assessment against the NSW EPA (2014) Waste Classification guidelines.
    - Asphalt that was laid during or before the 1980s commonly used coal tar as a binder therefore further assessment is required if it is proposed to be re-used on or off-site. The asphalt is pre-classified as general solid waste if it is to be disposed of at an appropriately licenced landfill.
- Fill material imported to site:
    - Must meet the requirements of the NSW EPA (2014) Excavated Natural Material Order.
    - Other acceptable materials are quarried soil-like materials and construction materials which are commercial products available to the construction industry. Information qualifying such products should include the product specification and inspection records confirming that the material is consistent with the related specification.

This executive summary and the findings of this PSI are subject to the limitations as stated in **Section 13.0**.

13.0 Unexpected findings

If any unconsolidated, odorous, stained, or deleterious fill or soils, asbestos or asbestos containing material are encountered during any further excavation, suspected historical contaminating activities are encountered, or conditions that are not alike the above descriptions, the site supervisor should be informed, the work stopped, and this office be contacted immediately for further evaluation by an appropriately qualified environmental consultant. The unexpected findings may trigger the need for more investigation and assessment dependant on the scope and context of the unexpected finding.

14.0 Limitations and disclaimer

DM McMahon Pty Ltd has prepared this report in accordance with the usual care and thoroughness of the consulting profession for the use of Umwelt (Australia) Pty Ltd and TfNSW and only those third parties who have been authorised by DM McMahon Pty Ltd to rely on this report.

The information contained in this report has been extracted from field and laboratory source believed to be reliable and accurate. DM McMahon Pty Ltd nor the Certified Site Contamination Specialist assume any responsibility for the misinterpretation of information supplied in this report. The accuracy and reliability of recommendations identified in this report need to be evaluated with due care according to individual circumstances. It should be noted that the recommendations and findings in this report are based solely upon the said site location and conditions at the time of testing. The results of the said investigations undertaken are an overall representation of the conditions encountered. The properties of the soil and groundwater within the location may change due to variations in ground conditions outside of the tested area. The author has no control or liability over site variability that may warrant further investigation that may lead to significant design changes.

A pH of 6.0 ($CaCl^2$) and Cation Exchange Capacity of 10 has been conservatively adopted (Chen & McKane 1997) for ACLs.
A conservative sandy/coarse soil texture has been adopted for HSLs and EILs.

No. of samples analysed	: 31		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alana Smylie	Asbestos Identifier	Newcastle - Asbestos, Mayfield West, NSW
Ankit Joshi	Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- poor spike recovery for Hexavalent Chromium Alkaline Digest analysis due to matrix interferences.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.

1.0 Executive summary

As background, DM McMahon Pty Ltd (McMahon) conducted a Preliminary Site Investigation (PSI) in 2021 at the proposed intersection upgrade of the Old Narrandera Road and the Olympic Highway Wagga Wagga NSW (the site) as part of a risk assessment to future site users from potential contamination pertaining to historical land use of the site and surrounds (McMahon PSI 7562). The site is subject to a proposed upgrade by Transport for NSW (TfNSW) and is located at the northern end of the Gobbagombalin Bridge crossing the Murrumbidgee River. From the available information, the previous land use is agricultural. The current intersection arrangement is 'seagull' configuration. The proposed upgrade will include building a second right turn for lane for traffic exiting Old Narrandera Road and building two southbound through lanes merging south of the intersection. There are nine potential ancillary facility areas: three to the west of the site along Old Narrandera Road (ON5, ON7 & ON8), three to the north east along Farrer Road (ON1-ON3) and three to the east of the site on the south western side of the Olympic Highway (ON9-ON11). A map of the site and ancillary areas can be seen in **Attachment A**.

The PSI recommended a Detailed Site Investigation (DSI) be carried out for future development owing to the sites and surrounds agricultural and commercial land use and the following potential contamination sources relative to the development being identified:

1. **Fill material including bulk fill, road base and asphalt.**
2. **Dumped rubbish.**
3. **Fuel and oil from machinery maintenance.**
4. **Emissions from vehicles.**
5. **Pesticides from agricultural land use.**
6. **Underground services, typically water pipes and comms boxes.**
7. **Irrigation of treated effluent.**

The purpose of this DSI is to identify the nature of the potential contamination and delineate its lateral and vertical extent to a sufficient degree that appropriate site management strategies can be devised, if required.

The scope of work includes:

- A desktop study to collect basic site information and identify the site characteristics.
- A site inspection with sampling using Data Quality Objectives (DQOs).
    - 30 systematic soil locations from ON2, ON3, ON5, ON7, ON8, ON9, ON10 and ON11. Samples were analysed for heavy metals, pesticides (organochlorine and organophosphate), and volatiles.
    - 12 systematic soil locations from ON1 and within the construction footprint. Samples were analysed for hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), pesticides (organochlorine and organophosphate), heavy metals and asbestos.
    - 7 samples from a previous TfNSW geotechnical investigation were also analysed for heavy metals and asbestos.
    - Vapour screening at each sampling location.

- An assessment of the potential contamination source-pathway-receptor linkages.
- Interpretation of data collected to conduct a risk assessment as part of the conceptual site model for an assessment of site suitability for the proposed land use.

Findings of the investigation include:

- There is no gross soil contamination across the site from the identified potential contamination sources that would materially affect the proposed land use of the site with all results below the assessment criteria.
- The results of the investigation conclude that the identified historical potential contaminating land use is assessed to be of low significance in terms of risk to future site users and the site is suitable for the proposed upgrade.
- Management strategies for materials generated from and imported to the site as outlined in **Section 12.0** are recommended to be adopted during future development.
- A protocol for unexpected finds as outlined in **Section 13.0** has also been developed as part of this risk assessment framework if additional potential contamination sources are identified during development
- This executive summary and the findings of this PSI are subject to the limitations as stated in **Section 14.0**.

2.0 Objectives

The objective of this investigation is to:

- Provide information regarding potential contamination on site.
- Providing a factual record of the works completed and results.
- Undertaking a risk assessment for health risk to future site users and the environment.
- Provide a statement of recommendations for further investigation and/or ongoing site management or alternatively, suitability of the site for the proposed land use.
- To prepare the DSI in general accordance with the relevant guidelines and legislation, namely:
    - NSW EPA. Consultants Reporting on Contaminated Land: Contaminated Land Guidelines, (2020).
    - Transport for NSW Guideline for the Management of Contamination (Roads and Maritime Services, 2013).
    - State Environmental Planning Policy No 55 – Remediation of Land, (1998).
    - National Environment Protection (Assessment of Site Contamination) Measure (NEPM), (2013).

3.0 Scope of work

The scope of work includes the following:

- Review the available information regarding historical, current, and proposed land use of the site and surrounds.
- Review the environmental setting of the site and surrounds.
- Assess the potential contamination sources and Contaminants of Potential Concern (CoPCs).
- Assess the potential contamination source-pathway-receptor linkages from the CoPCs, environmental setting and land use.
- Formulate a Sampling, Analysis & Quality Plan (SAQP) to investigate the potential contamination based on the recommendations in the PSI.
- Conduct soil sampling across the site for the CoPCs.
- Collect soil samples for laboratory analysis of the CoPCs.
- Compare the laboratory and screening results against the adopted criteria.
- Evaluate Quality Assurance/Quality Control (QA/QC) data to assess the sampling and analysis procedure.
- Refine a Conceptual Site Model (CSM) to assess potential contamination risk from the source-pathway-receptor linkages.
- Provide a clear statement on site suitability for the proposed land use or the need for further investigation, remediation, and/or ongoing site management.

4.0 Site identification

The site identification can be seen as follows, **Table 1**.

Table 1: *Site identification*

Site	Details
Ancillary site 1 (ON1) **11 Farrer Road Boorooma**	**Real property description:** Lot 2 DP702230 **Centre coordinate:** 534435 6119250 MGA GDA z55 **Property size:** 2.62ha approximately (ancillary area) **Local Government Area:** Wagga Wagga **Present use:** Vacant **Present zoning**: R1 – General Residential and R5 – Large Lot Residential

Ancillary site 11 (ON11) **Boorooma Street Boorooma**	**Real property description:** Lot 1 DP 707812 **Centre coordinate:** 532356 6117659 MGA GDA z55 **Property size:** 5.69ha approximately **Local Government Area:** Wagga Wagga **Present use:** Agricultural **Present zoning**: RU1 – Primary Production

5.0 Site history

From research of land titles, Council records, EPA records, aerial photography, internet articles, and interviews with people who have historical knowledge of the site, the following site history is offered:

Historical owners

The Gobbagombalin (also known as Gobbagumbalin) Estate was settled in the 1830's and, in 1900 was the first station in the district to begin sharefarming. Sharefarmers included Arthur Clout, Edward Crouch, John Wells Shephard and Joseph James Bright. The Estate was purchased by the Crown in 1906 and divided into 146 farms available for selection. The balance was absorbed by the share and tenant farmers, who were granted preferential treatment.

Council records

A search of Council records returned the following:

ON5, ON7 and ON8

2002 (DA02/0973) – Additions to dwelling.

Applicant: Eugene Dominic Heffernan.

Owner: Robert W Ronald & Margaret E Ronald.

2004 (DA04/0981) -- Additions to dwelling in floodplain area.

Applicant: Stephanie Patricia Day.

2006 (DA06/0635) – Proposed storage shed.

Applicant: Gobbagumbalin Pastoral Co.

Section 10.7

Section 10.7 Planning Certificates were not obtained for the site owing to the agricultural historical land use.

EPA records

There are no records on the Contaminated Land Record Database for the site pertaining to Preliminary Investigation Orders, Declaration of Significantly Contaminated Land, Approved Voluntary Management Plans, Management Orders, Ongoing Maintenance Orders, Repeal Revocation or Variation Notice, Site Audit Statement, or Notice of Completion or Withdrawal of Approved VMP. The site or neighbouring sites have not been "notified" to the EPA on the list of NSW Contaminated sites as of December 2021.

Aerial photos

McMahon observed the following from a review of the available aerial photography.

1966 – The site and surrounds are a paddock. Properties exist to the south west of the site. A road crosses the Gobbagombalin Lagoon from east to west.

1971 – There is no change to the site. Structures have been built to the north of the site. Sewage ponds have been created to the south east.

1980 – There is no change to the site and surrounds.

1990 – There is no change to the site. Development has occurred at the property to the south west of the site.

1995 – There is no change to the site. The Gobbagombalin Bridge has been constructed and crosses the Gobbagombalin Lagoon north to south. The suburb of Estella has been developed to the north.

1997 – Slope stabilisation has occurred just past the Gobbagombalin Bridge to the south of the site. The Council borrow pit has been established to the east.

1998 – The current intersection has been constructed and the Olympic Highway runs north to south.

2009 – No change, reflects current site conditions. Further residential development has occurred in Estella.

2012 – The flats to the east and south of the site (including ON9, ON10 and ON11) are flooded as the Murrumbidgee River peaked at 10.56 metres. The house to the north of the site has been demolished. Residential development has occurred to the north (Estella) and north east (Boorooma).

2013 – No change, reflects current site conditions. Residential development continues in Estella and Boorooma.

2014 – No change, reflects current site conditions. Residential development continues in Estella and Boorooma. Construction has begun for the suburb of Gobbagombalin to the north west of the site.

2016 – No change, reflects current site conditions. Residential development continues in Estella, Boorooma and Gobbagombalin.

2017 – No change, reflects current site conditions. Residential development continues in Estella, Boorooma and Gobbagombalin.

2018 – No change, reflects current site conditions. Residential development continues in Estella, Boorooma and Gobbagombalin.

2019 – No change, reflects current site conditions. Residential development continues in Estella, Boorooma and Gobbagombalin.

2020 – No change, reflects current site conditions. Residential development continues in Estella, Boorooma and Gobbagombalin.

ON1, ON2 and ON3

ON1, ON2 and ON3 has remained agricultural land until 2018 when unpaved roads can be seen in the south west corner. In 2020, ON1 was used as a site compound for the Farrer Road upgrade.

The aerial photographs can be seen in the PSI report (McMahon PSI 7562).

Internet search

- In the 1830's, John Thorne brought stock to the Wagga area and had taken up 'Gobbagombalin' (meaning turkey egg) (Morris, 1999, *Wagga Wagga – A History*, pg.18).

- Abraham Booth settled in Wagga in 1863 having acquired 65,00 acres on the Murrumbidgee River at Gobbagumbalin and Tooyal (https://www.wwdhs.org.au/booth-family/).
- Few selections were made on the Gobbagombalin run in 1870, notably by Thomas Cartwright junior, Basil B. Bennett and his son, E.J.R Bennett (Morris, 1999, *Wagga Wagga – A History*, pg.50).
- In 1896, part of Gobbagombalin was resumed (Morris, 1999, *Wagga Wagga – A History*, pg.53).
- At the Gobbagombalin Station, J.G Fletcher conducted an extensive breeding program for cattle and sheep (Morris, 1999, *Wagga Wagga – A History*, pg.52).
- In 1900, at the instigation of J.G Fletcher, Gobbagombalin became the first station in the district to begin share farming (Morris, 1999, *Wagga Wagga – A History*, pg.52-53).
- Under the Closer Settlement Act of 1905, Gobbagombalin (62,122 acres) was one of the first estates purchased by the Crown, from the executors of the late Abraham Booth in June 1906 (Morris, 1999, *Wagga Wagga – A History*, pg.53).
- In September 1906, the work of subdivision in connection with the Gobbagumbalin Estate had been practically completed. The whole of the estate was proposed to be cut up into 850 farms, the areas ranging from nearly 1000 acres down to 200. The average size of the wheat growing blocks, which compromise the bulk of the property, will be about 500 acres. The next step in connection with the scheme will be its submission to the Closer Settlement Board for approval (*The Wagga Advertiser,* Thursday 20 September 1906, https://trove.nla.gov.au/newspaper/article/145029968?searchTerm=gobbagumbalin)
- In 1907, E. Field had selected at Gobbagombalin, choosing an area with a hill at the centre. At first Field tried dairying but abandoned the venture and went into wheat. Two thirds of the property were in cultivation by 1911. Field also had seven acres under fruit. There was also a vegetable garden, a hive of bees and a poultry run (including 200 turkeys) as well as wheat, oats, and barley. Although few of the selectors remained, the area had been opened up and used for diversified farming and cereal cropping as well as for sheep and cattle raising (Morris, 1999, *Wagga Wagga – A History*, pg.53-54).
- The Gobbagombalin homestead block, with the homestead, a small house, outbuildings, and a garden, was sold to dairy farmer J.W Shepherd and his brother in February 1910 (Morris, 1999, *Wagga Wagga – A History*, pg.53).
- In July 1995, ten beams, the first of 190 beams have been placed over two spans of the Gobbagombalin Bridge being built to cross the Murrumbidgee River (https://www.wwdhs.org.au/20th-july-2019-in-waggas-past-25-and-50-years-ago/)
- In February 1995, Ray Tuck from the Roads and Traffic Authority said that preliminary results indicated a solid footing for the Gobbagombalin Bridge piles and that the bridge should be completed by June 1998 (https://www.wwdhs.org.au/2nd-february-2019-in-the-past-25-and-50-years-ago/)
- In February 1996, the Gobbagombalin Bridge project progressed to its third stage with the Roads and Traffic Authority announcing a $13.2 million contract for construction of four kilometres of road through to Coolamon Road (https://www.wwdhs.org.au/6th-february-2021-in-waggas-past-25-and-50-years-ago/)

- In August 1996, the last of 195 beams were laid on the Gobbagombalin Bridge (https://www.wwdhs.org.au/15th-august-2020-in-waggas-past-25-and-50-years-ago/)
- The Gobbagombalin Bridge was officially opened 26 July 1997 (https://www.waggawaggaaustralia.com.au/visitor-information/history/history-timeline/)

Interviews

McMahon conducted an interview with Robert Ronald, the previous occupant of Gobbagombalin Station and the following was forthcoming:

- Gobbagombalin Station was not used as a compound during construction of the Gobbagombalin Bridge. The area underneath the bridge the southern side of the river was the compound.

McMahon assesses that the information supplied by the Robert Ronald is reliable based on comparable findings from the site inspection, research, and multiple lines of evidence.

6.0 Site condition and surrounding environment

McMahon notes the following observations of the site condition as part of the PSI.

ON1 is currently vacant land. Surficial fill material has been placed on site. Agricultural land use prior to the fill being placed is likely. Some dumped rubbish was observed. A thorough inspection of the site surface was hampered by thick grass.

ON2, ON3 and ON5, and ON8-ON11 are currently grazing land with a history of broad acre agricultural land use. Cattle yards are present in the eastern corner of ON5. A thorough inspection of the site surface at all sites was hampered by thick grass.

The proposed construction footprint also includes part of the road reserve with bulk earthworks having altered the natural topography. Bulk fill has been placed on the road reserve. Agricultural land use prior to the fill being placed is likely. Some dumped rubbish was observed. Underground services are present. Stormwater run-off from the Olympic Highway and up-gradient suburban and agricultural area is likely. Concentrated drainages are present that run under the highway. A thorough inspection of the site surface was hampered by thick grass.

McMahon attended a geotechnical investigation of the construction footprint of the Old Narrandera Road intersection upgrade on 19 February 2021. Subsurface conditions were fill material comprising of natural soil and aggregate. Select soil samples were taken from points 17/23, 17/27, 17/55 and 17/70 for future analysis. Seven samples were tested for heavy metals and asbestos as part of this DSI.

A summary of the site environmental setting is as follows.

Topography

The Wagga Wagga Topographic Map (8327-1N) indicates that the site is located at an elevation range of approximately 179-190m AHD. The site landform comprises of low-lying areas on the Murrumbidgee River alluvial floodplain and undulating rises to the west. Built infrastructure lies on top of the natural landform consisting of the Olympic Highway and associated road reserve.

Vegetation

The ancillary sites are well vegetated with annual grass and broadleaf species, as well as some scattered trees. The road alignments comprise of filled areas with limited vegetation, some trees and shrubs, and grass/broadleaf ground cover.

Natural Resources Sensitivity

A search of the WWCC online mapping found that the site is in a natural resource sensitivity area for groundwater vulnerability. The site is in an identified area of biodiversity as well as riparian lands and waterways, WWCC (2020).

Weather

The average rainfall for Wagga Wagga is approximately 525mm per annum, with the wettest months being October, June and July respectively. Wagga Wagga is characterised by cold wet winters and hot dry summers.

Hydrology

The site is part of the Murrumbidgee River catchment with the Gobbagombalin Lagoon and the Murrumbidgee River to the south of the site. The low-lying areas are subject to a flood risk. The run-off regime is highly altered by built infrastructure including roads and surrounding developments.

Soil & Landform

The site lies within the Farnham (fa) and Glenmornon (gl) mapping units from the Soil Landscapes of the Wagga Wagga 1:100 000 Sheet, (DLWC 1997).

The map unit fa is described as gently undulating and annually flooded areas of the Murrumbidgee River. Soils include moderately deep eutrophic brown dermosols, grey vertosols and rudosols. Qualities and limitations include high fertility, annual flooding, erosion hazard, high foundation hazard, high plasticity, and localised rapidly draining sandy levees.

The map unit gl is described as ridges and crests of low hills. Soils include shallow to moderately deep mesotrophic red kandosols. Limitations include steep slopes, common rock outcrop, high erosion hazard, high foundation hazard, strong acidity, low fertility (locally shallow and stony) soils.

The potential facility ancillary areas along Old Narrandera Road lies within the Currawarna (cw) and East Bomen (eb) mapping units from the Soil Landscapes of the Wagga Wagga 1:100 000 Sheet, (DLWC 1997).

The map unit cw is described as small undulating rises and gently inclined benchs of windblown sands. Soils include moderately deep arenic orthic tenosols. Limitations include moderate to high erosion hazard, foundation hazard (localised), moderate acidity, low fertility and low available water holding capacity.

The map unit eb is described as undulating rises of Silurian Wantabadgery Granodiorite. Soils include shallow to moderately deep eutrophic red dermosols, deep eutrophic brown dermosols and moderately deep eutrophic brown dermosols. Limitations include moderate erosion hazard, moderately acidic and locally shallow soils.

Geology & Regolith

Soils on the low-lying areas have formed on recent Quaternary alluvium. Parent materials consist of gravel, sand, silt and clay deposits. The higher elevation areas are underlain by Silurian Wantabadgery Granodiorite.

Hydrogeology

The hydrogeology beneath the lower lying areas of the site is characterised by the Cowra formation that is nearest to the surface with around 5-15m of clay overlying interbedded sand, silt, gravel and clays. The Cowra formation varies in thickness from 15 to 35m with the Lachlan formation residing underneath. There is a localised low level of connection between the surface and groundwater which is consistent with the characteristic of the area. Flow gradients

in the Cowra formation are likely to be in a south westerly direction towards the river, NSW DPI (2017). The higher elevations are typically weathered granodiorite with limited near surface groundwater resources.

There are no bores within 500m of the Old Narrandera Road Olympic Highway intersection, Water NSW (2021). There are two bores within 500m of ON5, ON7 and ON8 (GW401716, GW060800, 16m and 15.5m respectively, both for household use) and one bore within 500m of ON1 (GW416319, 19m, for monitoring).

7.0 Sampling and analysis quality plan and sampling methodology

The Data Quality Objectives (DQOs) of the site assessment have been developed to define the type and quality of data to meet the project objectives. The DQOs have been developed generally in accordance with the seven step DQO process as outlined in AS 4482.1:2005 and the USA EPA: Guidance on Systematic Planning Using the Data Quality Objectives Process (2006a). These DQO's are as follows:

1. **The problem**
2. **The goal of the study**
3. **Information inputs**
4. **Study boundaries**
5. **The analytical approach**
6. **Performance and acceptance criteria**
7. **Obtaining data**

These objectives have been further outlined in the following sections.

DQO 1 - The problem

Potential contamination from previous land use may be present across the site and insufficient data relating to this source is available to determine land use suitability with the necessary level of confidence.

DQO 2 - The goal of the study

Goals of the study include:

- Undertake intrusive investigations based on the data gaps to determine if there is contamination within fill and soils associated with the identified contamination sources.
- Determine if any contamination, should it be identified, poses a risk to current and/or future receptors at the site or within potential exposure pathways from the site.
- Determining whether the site is currently, or can be made, suitable for the proposed development regarding contamination.

DQO 3 - Information inputs

- Desktop data including site inspections, site condition, history, geology, hydrogeology, fill, and soil analysis to characterise the site.
- Observational data including visual and olfactory conditions obtained from the proposed sampling.
- Vapour screening for Volatile Organic Compounds (VOCs) using a Photo-Ionisation Detector (PID).
- Analytical data relative to assessment criteria.

DQO 4 - Study boundaries

- Intrusive investigation across the site.
- Temporal boundaries are limited to the proposed fieldwork timeframes in the first quarter of the year 2022.

DQO 5 - The analytical approach

Samples will be tested against the following potential contamination sources

- Fill material including bulk fill, road base and asphalt.
- Dumped rubbish.
- Fuel and oil from machinery maintenance.
- Emissions from vehicles.
- Pesticides from agricultural land use.
- Underground services, typically water pipes and comms boxes.
- Irrigation of treated effluent.

DQO 6 - Performance and acceptance criteria

Specific limits for the investigation are in accordance with the appropriate guidance made or endorsed by state and national regulations, appropriate indicators of data quality, and industry standard procedures for field sampling and handling. To assess the validity of data for decision making, the data is assessed against a set of data quality indicators, the following predetermined data quality indicators have been adopted.

The key decision rules for the investigation are:

1) Has the analytical data been collected as part of the testing and met the data quality indicators? If they have then the data can be used to answer the decision rule/s and the decision statements developed in Step 2 of the DQOs. If not, then the need to collect additional data may be required.
2) Do contaminant concentrations exceed the investigation and screening criteria? If not, then the potential contamination does not pose an above low level of risk. Where results exceed the investigation and screening criteria, this may indicate an unacceptable level of risk. Further risk assessment and investigations may be warranted to determine the potential for impacts.

The key decision errors for the investigation are:

i. deciding that fill and soil on site is contaminated when it truly is not, and
ii. deciding that fill and soil on site is not contaminated when it truly is.

The true state of nature for decision error (i) is that fill and soil is not contaminated.
The true state of nature for decision error (ii) is that fill and soil is contaminated.

The site assessment criteria were specifically derived and incorporate the following:

- The samples are not composited so as the direct reading of contaminant levels will be found from each sample point on which an appropriate decision can be based off.
- QA/QC duplicate should have a Relative Percentage Difference (RPD) of <30%.
- Rinsate samples should return negligible concentrations for all parameters tested to ensure an appropriate sampling and decontamination procedure.
- If contaminant levels exceed the Tier 1 and statistical assessment criteria further investigation and assessment may be required.
- Specific Tier 1 assessment criteria can be seen below, **Table 2**.

- Recreational/open space was selected as the assessment criteria as it is the most conservative criteria and is consistent with the current land use.

Table 2: *Assessment criteria*

Material	Analytes	Criteria
Soil/fill	Hydrocarbons Solvents Pesticides Heavy metals	**Health Investigation Levels (HILs)** **-**Recreational C NEPM (2013) -Table 1A(1) Heavy metals and OCPs, OPPs. -Soils within 3m of surface **Health Screening Levels (HSLs) for vapour intrusion** -Recreational C NEPM (2013) -Table 1A(3) TRH (F1 & F2) and BTEX -0m to <1m depth -Clay soil **Added Contaminants Limits (ACLs)** -Urban residential/public open space NEPM (2013) -Table 1B(1) Zinc -Table 1B(2) Copper -Table 1B(3) Nickel -Table 1B(4) Lead -Soils within 2m of surface -pH of 6.0 ($CaCl_2$) assumed from local knowledge -CEC of 10 assumed from local knowledge **Environmental Investigation Levels (EILs)** -Urban residential/public open space NEPM (2013) -Table 1B(5) Arsenic, DDT and naphthalene -Soils within 2m of surface **Ecological Screening Levels (ESLs)** -Urban residential/public open space NEPM (2013) -Table 1B(6) TRH (F1-F4) and BTEX -Soils within 2m of surface
Soil/fill	Asbestos	Analytical method used for presence/absence of free fibres. No visible asbestos on the soil surface.
Vapour screening	VOCs (from PID)	20.0ppm (based on similar sites and previous consultant experience).

The Tier 1 assessment criteria are used as an initial screening of the data to determine whether further assessment is required. Where above criteria exceedance indicates a risk to human health or the environment, site specific risk assessment, management or remediation will be recommended as appropriate.

DQO 7 - Obtaining data

The sampling pattern and strategy identifies the occurrence of potential contamination for suitable site characterisation. The sampling pattern and strategy has been devised based on site history, land uses, aerial imagery, site inspections, previous investigations and the NEPM (2013). The sampling pattern has been described in more detail below.

Sampling strategy and pattern

A systematic sampling pattern has been chosen based on potential contamination sources, previous land use, and requirements to delineate potential contamination. The adopted sampling pattern is suitable to make a quantitative statement about the level of confidence regarding the quality and accuracy of results. McMahon assesses that the sampling pattern is suitable to be used for decision making and site characterisation.

Key features of the sampling pattern include:

- 30 systematic soil locations from ON2, ON3, ON5, ON7, ON8, ON9, ON10 and ON11. Samples were analysed for heavy metals, pesticides (organochlorine and organophosphate), and volatiles.
- 12 systematic soil locations from ON1 and within the construction footprint. Samples were analysed for hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), pesticides (organochlorine and organophosphate), heavy metals and asbestos.
- 7 samples from a previous TfNSW geotechnical investigation were also analysed for heavy metals and asbestos.
- Vapour screening at each sampling location.
- Two duplicate samples.
- One rinsate sample.

By reference to the DQOs, a map of the sampling locations can be seen in **Attachment B**.

Sampling design justification

The following table presents a summary of the sampling locations and rationale behind their selection, **Table 3**.

Table 3: *Sampling rationale*

Sample location	Material	Rationale
1-30	Natural soil	To assess the near surface and subsoil contamination from ON2, ON3, ON5, ON7, ON8, ON9, ON10 and ON11 from potential persistent agricultural chemicals.
31-43	Natural soil	To assess the near surface and subsoil contamination from ON1 and within the construction footprint from potential persistent agricultural chemicals and industrial use.

The seven sampling locations from the previous TfNSW geotechnical investigation (Ref: GSW19017/A01) were chosen and sampled by TfNSW in February 2021. These sampling locations are identified as follows:

- 17/23A1, 17/23A2 and 17/23D
- 17/27B
- 17/55
- 17/70C1 and 17/70C2

Failure to meet objectives procedure

If the procedures undertaken do not satisfy the expected data quality objectives, a review of the SAQP will be conducted prior to any further works.

Sampling and analysis methodology

The sampling officer wore unused disposable nitrile gloves to extract samples directly from the excavated pit to place into Teflon lined glass sample jars for chemical analytes and zip lock plastic bags for asbestos. Collected sample containers were placed into a chilled esky for preservation prior to analysis. All in-field observations and any relevant comments are detailed in the field sheets and a Chain of Custody form was produced to accompany the samples to the laboratory.

Soil sampling standards

Soil sampling and soil descriptions were undertaken by reference to:

- AS 4482.1:2005 - Guide to the investigation and sampling of sites with potentially contaminated soil Part 1: Non-volatile and semi-volatile compounds.
- AS 4482.2:1999 - Guide to the sampling and investigation of potentially contaminated soil Part 2: Volatile substances.
- WA Department of Health (2009) - Guidelines for the Assessment, Remediation and Management of Asbestos Contaminated Sites in Western Australia.
- AS 1726:2017 – Geotechnical Site Investigations.

Vapour screening method

Fill and soil samples were screened in-situ with a portable PID device with a 10.6eV gas discharge lamp for screening of Volatile Organic Compounds (VOCs). The 10.6eV lamp is assessed to be appropriate for VOCs screening and is recommended unless compounds that require a 10.6 eV lamp dominate the emissions scenario, RAE Systems (2016). The PID was calibrated to a known concentration (92ppm) of iso-butylene gas before use, the calibration certificate can be seen in **Attachment C**.

Prior to screening locations, the PID and its sample train were submitted to a leak detection test undertaken by a suitably qualified person. Between each sampling point, fresh air sampling of the probe and sample train was undertaken to ensure representative samples are obtained from each sample point.

8.0 Results

Sampling for this DSI was conducted over two days on 25 January 2022 and 27 January 2022. The weather was warm and dry. A summary of the field observations and sample analytical results are as follows.

Site surface

- The site surface across all sites was annual grasses, perennial grasses, and weeds. ON2 was overgrown with fill covering the site. Asphalt and stone were observed.
- There were no visual or olfactory indicators of chemical contamination on the surface across all sites.
- No asbestos containing material was observed across all sites.

Fill and soil

General profile observations are:

- The natural soil generally consisted of reddish and brownish silty sandy clays.
- The fill material consisted of clayey material with some gravel addition.
- There were no visual or olfactory indicators of chemical contamination in the fill or soil.
- There was no asbestos containing material observed in the fill or soil.

Soil analysis

1. **Fill material including bulk fill, road base and asphalt.**
    - Hydrocarbons are below LORs and the adopted criteria.
    - Solvents are below LORs and the adopted criteria.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Asbestos is below the LORs and the adopted criteria.

2. **Commercial land use** – including potential machinery maintenance, dumped rubbish and emissions from vehicles.
    - Hydrocarbons are below LORs and the adopted criteria.
    - Solvents are below LORs and the adopted criteria.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Phenols are below LORs and the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.
    - Asbestos is below the LORs and the adopted criteria.

3. **Pesticides from agricultural land use.**
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.

4. **Underground services**.
    - Asbestos is below the LORs and the adopted criteria.

4. **Irrigation of treated effluent**.
    - Heavy metals are below the Limits of Reporting (LORs) and/or the adopted criteria.
    - Pesticides are below LORs and the adopted criteria.

Tabulated results can be seen in **Attachment D**.

Laboratory reports can be seen in **Attachment E**.

Vapour screening

- Soil vapour results from the PID screening returned results below the adopted criteria of 20.0ppm.

9.0 Quality assurance/quality control data evaluation

To assess the validity of data for decision making, the data has been assessed against a set of Data Quality Indicators (DQIs), the following predetermined DQIs have been adopted, **Table 4** and **Table 5**.

Table 4: *Sampling Data Quality Indicators*

Adopted practices	Completeness	Comparability	Representativeness	Precision	Accuracy
Details of sampling team – David McMahon (Experienced consultant) and Zach Delaney (experienced sampling officer).	✓	✓			
Reference to sampling plan/method, including any deviations from it – sampling and analysis quality plan.	✓				
Decontamination procedures carried out between sampling events.			✓	✓	✓
Logs for each sample collected, including date, time, location (with GPS coordinates), sampler, duplicate samples, chemical analyses to be performed, site observations and weather/environmental (i.e. surroundings) conditions. Include any diagrams, maps, photos.		✓	✓		
Chain of Custody fully identifying – for each sample – the sampler, nature of the sample, collection date, analyses to be performed, sample preservation method, departure time from the site and dispatch courier(s) (where applicable).	✓	✓			
Field quality assurance/quality control results (rinsate).				✓	✓
Statement of duplicate and other QAQC sample frequencies – 1 per 20 samples for duplicates, 1 per sampling event for rinsate.			✓	✓	
Field instrument calibrations (when used) with supporting documentation.				✓	✓
Sampling devices and equipment appropriate to sampling requirements.	✓	✓			

Table 5: *Analysis Data Quality Indicators*

Adopted practices	Completeness	Comparability	Representativeness	Precision	Accuracy
A copy of signed Chain of Custody forms acknowledging receipt date and time, and identity of samples included in shipments.	✓	✓			
Analytical methods used, including any deviations.	✓	✓			
Calculation of Relative Percentage Difference for duplicate comparison.	✓	✓			✓
Laboratory accreditation for analytical methods used, also noting any methods used which are not covered by accreditation.	✓			✓	
Surrogates and spikes used throughout the full method process, or only in parts. Results are corrected for the recovery.	✓	✓			
A list of what spikes and surrogates were run with their recoveries and acceptance criteria.		✓			✓
Practical quantification limits (PQL).	✓	✓			
Laboratory duplicates and rinsate results.	✓				✓
Evaluation of all quality assurance/control information listed above against the stated data quality objectives, including a quality assurance/control data evaluation.	✓	✓	✓	✓	✓

Data quality objectives

The soil duplicate sample (8342/D1) was taken from Sample Point 30 and returned an average Relative Percent Difference (RPD) of less than 30% for all analytes except for lead, nickel and zinc.

The soil duplicate sample (8342/D2) was taken from Sample Point 21 and returned an average Relative Percent Difference (RPD) of less than 30% for all analytes except for chromium, nickel and zinc.

The soil duplicate sample (8342/D3) was taken from Sample Point 38 and returned an average Relative Percent Difference (RPD) of less than 30% for all analytes except for zinc.

The RPD exceedance is of limited reliability where both the duplicate and its reference sample record concentrations less than ten times the limits of the assessment criteria. This exceedance is not considered to affect the outcomes of the investigation findings.

The soil sampling rinsate sample returned results less than the LOR.

The seven samples taken from the previous TfNSW geotechnical investigation exceeded the holding times for analysis. Owing to the persistent nature of heavy metals and pesticides in the environment, McMahon assesses that this does not affect the reliability of the results.

In consideration of the adopted QA/QC procedures and the results from their subsequent analysis, McMahon assesses the QA/QC results are suitable for the investigation undertaken and reflect the analytical data is of a suitable quality to determine contamination risk with an appropriate level of confidence.

10.0 Conceptual site model

A conceptual site model (CSM) is a representation of site-related information regarding contamination sources, receptors and exposure pathways between those sources and receptors and is presented and follows.

Summary

The site has a historical agricultural and commercial land use. The potential contamination sources are persistent material and chemicals that may have accumulated in the fill material and natural soil from previous land uses. Improvements and underground services also are a potential contamination source if they contain hazardous materials. There is limited likelihood of soil contact for future site users or construction workers on the ancillary sites. Soil contact for construction workers within the road alignments is likely. Groundwater is deep (>8m) and is unlikely to be intercepted during development.

Potential and known sources of contamination

Based on an assessment of the information collated as part of this PSI, the following potential sources of contamination and contaminants of concern have been identified, **Table 6**.

Table 6: *Potential contamination sources and contaminants of concern*

Location	Contaminant source	Potential contaminants of concern
ON1 Road reserve	Fill material including bulk fill, road base and asphalt.	Hydrocarbons (total recoverable hydrocarbons and polycyclic aromatic hydrocarbons), solvents (benzene, toluene, ethylbenzene, and xylene), heavy metals and asbestos containing material (ACM).
ON1 Road reserve	Dumped rubbish.	Hydrocarbons, solvents, heavy metals, and ACM.
ON1	Fuel and oil from machinery maintenance.	Hydrocarbons, solvents, heavy metals, and phenols.
All sites	Emissions from vehicles.	Hydrocarbons, solvents, heavy metals, and phenols.
All sites	Pesticides from agricultural land use.	Heavy metals and pesticides (organochlorine and organophosphate).
All sites	Underground services, typically water pipes and comms boxes.	ACM.

Mechanism of contamination

The mechanism of contamination from the potential sources is predominantly top-down vertical and lateral migration into soil, fill and groundwater.

Potentially affected environmental media

- Soil.
- Fill.
- Soil vapour.
- Groundwater

Consideration of spatial and temporal variations

Spatial and temporal variation in potential contamination is possible with attenuation of volatile contaminants likely.

Actual or potential exposure pathways

- Short term direct soil contact from construction workers during the road construction or maintenance workers following construction.
- Inhalation of dust, vapour or fibres by construction workers, maintenance workers, road users, nearby residents and recreational users.
- Down gradient ecological receptors such as the Murrumbidgee River.
- Direct groundwater contact but groundwater is deep (>8m) and unlikely to be contacted.

Human and ecological receptors

- Future construction workers or maintenance workers.
- Future road users.
- Current and future rural, commercial, and residential users of adjacent land.
- Recreational users of adjacent land.

Frequency of exposure

- Construction and maintenance workers are assessed to be a short-term exposure risk.
- Future road users, adjacent site users and recreational users are assessed to have a medium to long-term exposure risk, however the potential for exposure once the road is constructed is minimal.
- Future groundwater users are a medium to long-term exposure risk.
- Ecological receptors are assessed to be a medium to long-term exposure risk.

Source pathway receptor linkage assessment

- Construction and maintenance workers will have limited risk of contact with potentially contaminated soil as it is expected that workers adopt appropriate safety controls.
- Future road users or adjacent site users have limited risk of contact with dust, fibres or potentially contaminated soil as the road will act as a barrier. However, during construction exposure is possible.
- Vapour accumulation risk is negligible owing to no buildings.
- Groundwater use or interception is unlikely as the site and surrounds are connected to reticulated town water and no domestic groundwater bores exists on site.
- There is a risk to down gradient ecological receptors from the migration of potentially contaminated surface water and groundwater if gross soil contamination is found.

Discussion of multiple lines of evidence

A multiple lines of evidence approach is the process for evaluating and integrating information from different sources of data and uses best professional judgement to assess the consistency and plausibility of the conclusions which can be drawn, NEPM (2013).

11.0 Site characterisation

From the assessment undertaken the following conclusion can be drawn in relation to site characterisation.

Contamination in the surficial fill and natural soil

- Gross fill or soil contamination was not encountered onsite that would materially affect the proposed land use.
- All analytes tested are below the adopted criteria.
- Aesthetic issues are assessed to be low given the proposal to landscape the road reserve once works are complete and reinstate the ancillary areas to the current condition.

Contamination in groundwater

- No groundwater was encountered to the investigated depth.
- The results of the soil investigation and laboratory analysis indicate an absence of gross chemical contamination; therefore, groundwater investigation is not considered warranted due to the low risk of contamination.
- The site presents a low groundwater contamination risk to current and future site users as direct contact is unlikely and there is no known domestic use on or downgradient of the site.

Contamination in surface water

- There is no surface water on site nor known nearby sensitive aquatic receptors.
- Based on the chemical results, there is low likelihood of contaminated run-off from the site that would impacts surface waters.

12.0 Conclusions and recommendations

This investigation met the objective of investigating and assessing potential contamination that may affect the suitability of the site for the proposed land use and assess the need for further investigation or site management strategies.

The results of the investigation conclude that the identified historical potential contaminating land use is assessed to be of low significance in terms of risk to future site users and the site is suitable for the proposed upgrade.

Unexpected finds are possible during the development and can be managed under an unexpected finds protocol as outlined in **Section 12.0**. These unexpected finds include but are not limited to:

- Buried or surface bonded asbestos containing material, asbestos fines/friable asbestos.
- Underground services containing asbestos.
- Building waste and rubbish.
- Buried organic materials.
- Stained or deleterious fill and soils.
- Malodorous fill and soils.
- Ashy deposits

TfNSW or the designated contractor is responsible for tracking the soil and fill material on and off site and the following site management is recommended:

- Material generated from the site:
    - The underlying natural subsoil meets the Virgin Excavated Natural Material classification and can be handled accordingly.
    - The surficial fill material requires assessment against the NSW EPA (2014) Excavated Natural Material characterisation and any material that does not meet this characterisation requires assessment against the NSW EPA (2014) Waste Classification guidelines.
    - Asphalt that was laid during or before the 1980s commonly used coal tar as a binder therefore further assessment is required if it is proposed to be re-used on or off-site. The asphalt is pre-classified as general solid waste if it is to be disposed of at an appropriately licenced landfill.
- Fill material imported to site:
    - Must meet the requirements of the NSW EPA (2014) Excavated Natural Material Order.
    - Other acceptable materials are quarried soil-like materials and construction materials which are commercial products available to the construction industry. Information qualifying such products should include the product specification and inspection records confirming that the material is consistent with the related specification.

This executive summary and the findings of this PSI are subject to the limitations as stated in **Section 13.0**.

13.0 Unexpected findings

If any unconsolidated, odorous, stained or deleterious soils are encountered during any further excavation, suspected historical contaminating activities are encountered, or conditions that are not alike the above descriptions, the site supervisor should be informed, the work stopped, and this office be contacted immediately for further evaluation by an appropriately qualified environmental consultant. The unexpected findings may trigger the need for more investigation and assessment dependant on the scope and context of the unexpected finding.

14.0 Limitations and disclaimer

DM McMahon Pty Ltd has prepared this report in accordance with the usual care and thoroughness of the consulting profession for the use of Umwelt (Australia) Pty Ltd and only those third parties who have been authorised by DM McMahon Pty Ltd to rely on this report.

The information contained in this report has been extracted from field and laboratory source believed to be reliable and accurate. DM McMahon Pty Ltd nor the Certified Site Contamination Specialist assume any responsibility for the misinterpretation of information supplied in this report. The accuracy and reliability of recommendations identified in this report need to be evaluated with due care according to individual circumstances. It should be noted that the recommendations and findings in this report are based solely upon the said site location and conditions at the time of testing. The results of the said investigations undertaken are an overall representation of the conditions encountered. The properties of the soil and groundwater within the location may change due to variations in ground conditions outside of the tested area. The author has no control or liability over site variability that may warrant further investigation that may lead to significant design changes.

A pH of 6.0 ($CaCl^2$) and Cation Exchange Capacity of 10 has been conservatively adopted (Chen & McKane 1997) for ACLs.
A conservative sandy/coarse soil texture has been adopted for HSLs and EILs.

A pH of 6.0 ($CaCl^2$) and Cation Exchange Capacity of 10 has been conservatively adopted (Chen & McKane 1997) for ACLs.
A conservative sandy/coarse soil texture has been adopted for HSLs and EILs.

A pH of 6.0 ($CaCl^2$) and Cation Exchange Capacity of 10 has been conservatively adopted (Chen & McKane 1997) for ACLs.
A conservative sandy/coarse soil texture has been adopted for HSLs and EILs.

Job number: 8342
Project: Olympic Highway Intersection Upgrade Wagga Wagga NSW 2650

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alana Smylie	Asbestos Identifier	Newcastle - Asbestos, Mayfield West, NSW
Ankit Joshi	Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- poor spike recovery for Hexavalent Chromium Alkaline Digest analysis due to matrix interferences.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.

Analytical Results

Descriptive Results

Sub-Matrix: **SOIL**

Method: Compound	Sample ID - Sampling date / time	Analytical Results
EA200: AS 4964 - 2004 Identification of Asbestos in Soils		
EA200: Description	8342/31 - 25-Jan-2022 14:34	Soil sample.
EA200: Description	8342/32 - 27-Jan-2022 10:52	Soil sample.
EA200: Description	8342/33 - 27-Jan-2022 11:51	Soil sample.
EA200: Description	8342/34 - 25-Jan-2022 14:41	Soil sample.
EA200: Description	8342/35 - 27-Jan-2022 10:51	Soil sample.
EA200: Description	8342/36 - 27-Jan-2022 11:45	Soil sample.
EA200: Description	8342/37 - 25-Jan-2022 14:48	Soil sample.
EA200: Description	8342/38 - 25-Jan-2022 00:00	Soil sample.
EA200: Description	8342/39 - 25-Jan-2022 00:00	Soil sample.
EA200: Description	8342/40 - 25-Jan-2022 00:00	Soil sample.
EA200: Description	8342/41 - 27-Jan-2022 11:28	Soil sample.
EA200: Description	8342/42 - 27-Jan-2022 11:33	Soil sample.
EA200: Description	8342/17-23A1A - 19-Jan-2022 00:00	Soil sample.
EA200: Description	8342/17-23A2 - 19-Jan-2022 00:00	Soil sample.
EA200: Description	8342/17-23D - 19-Jan-2022 00:00	Soil sample.
EA200: Description	8342/17-55 - 19-Jan-2022 00:00	Soil sample.
EA200: Description	8342/27B - 19-Jan-2022 00:00	Soil sample.
EA200: Description	8342/70(2m) - 19-Jan-2022 00:00	Soil sample.
EA200: Description	83427/70(2.35m) - 19-Jan-2022 00:00	Soil sample.

Surrogate Control Limits

Sub-Matrix: **SOIL**

Compound	CAS Number	Recovery Limits (%) Low	High
EP066S: PCB Surrogate			
Decachlorobiphenyl	2051-24-3	39	149
EP068S: Organochlorine Pesticide Surrogate			
Dibromo-DDE	21655-73-2	49	147
EP068T: Organophosphorus Pesticide Surrogate			
DEF	78-48-8	35	143
EP075(SIM)S: Phenolic Compound Surrogates			
Phenol-d6	13127-88-3	63	123
2-Chlorophenol-D4	93951-73-6	66	122
2.4.6-Tribromophenol	118-79-6	40	138
EP075(SIM)T: PAH Surrogates			
2-Fluorobiphenyl	321-60-8	70	122
Anthracene-d10	1719-06-8	66	128
4-Terphenyl-d14	1718-51-0	65	129
EP080S: TPH(V)/BTEX Surrogates			
1.2-Dichloroethane-D4	17060-07-0	73	133
Toluene-D8	2037-26-5	74	132
4-Bromofluorobenzene	460-00-4	72	130

Inter-Laboratory Testing

Analysis conducted by ALS Newcastle, NATA accreditation no. 825, site no. 1656 (Chemistry) 9854 (Biology).
