Transport for NSW to investigate Stanwell Park safety improvements

16 January, 2024

Transport for NSW (Transport) is investigating safety improvements in Heathcote at the intersection of Railway Crescent and Lawrence Hargrave Drive at Stanwell Park.

The works follows on from community feedback regarding safety and connectivity at this intersection to the NSW Government and other stakeholders.

Transport is carrying out development and design options for the intersection that includes the development of a roundabout, as Transport continues to look to review safety for local residents.

A roundabout at this location will reduce the likelihood and severity of traffic incidents by reducing speed through the township and providing safer opportunities for traffic entering Lawrence Hargrave Drive from surrounding local roads.

Options for crossings as additional safety measures for cyclists and pedestrians are being considered during the design phase.

The local community can continue to provide feedback on the potential next steps for this project by emailing southprojects@transport.nsw.gov.au.
