

# Rail Service Improvement Program

## Newtown to Redfern Signalling Upgrade

October to December 2024

Transport for NSW acknowledges the Gadigal people of the Eora Nation as the Traditional Custodians of the lands on which we work and pays respect to Elders past and present.

The Rail Service Improvement Program, formerly known as More Trains More Services, aims to support a safe, equitable, and integrated transport network where people can travel more safely, reliably, and efficiently across NSW.

### What work are we doing?

Work inside the rail corridor will involve:

- upgrading and testing of existing signalling infrastructure
- signal and cable testing
- installation of track joints
- commissioning of signal gantry.

### When and where we'll be working

Work will occur within the rail corridor between Newtown and Redfern.

Standard construction hours on this project are between **7am and 6pm Monday to Friday and 8am and 1pm on Saturdays**.

### Out of hours work

From October through December, some work is required to take place outside of standard construction hours.

This work will take place between:

- **6am and 6pm Saturday 26 October and Sunday 27 October**

- **2am Saturday 2 November and 1am Monday 4 November**
- **10pm Friday 29 November and 6am Monday 2 December**

### Temporary parking changes on Copeland Avenue, Newtown

Up to seven parking spaces will be temporarily unavailable near the rail access gate on Copeland Avenue, adjacent to Watkin Street, between **6am Thursday 31 October and 6pm Sunday 3 November**. These spaces will be required for site amenities and worker vehicles.

### What will this mean for you?

You may notice:

- workers and vehicles
- temporary street parking removal on Copeland Avenue
- noise from machinery and equipment.

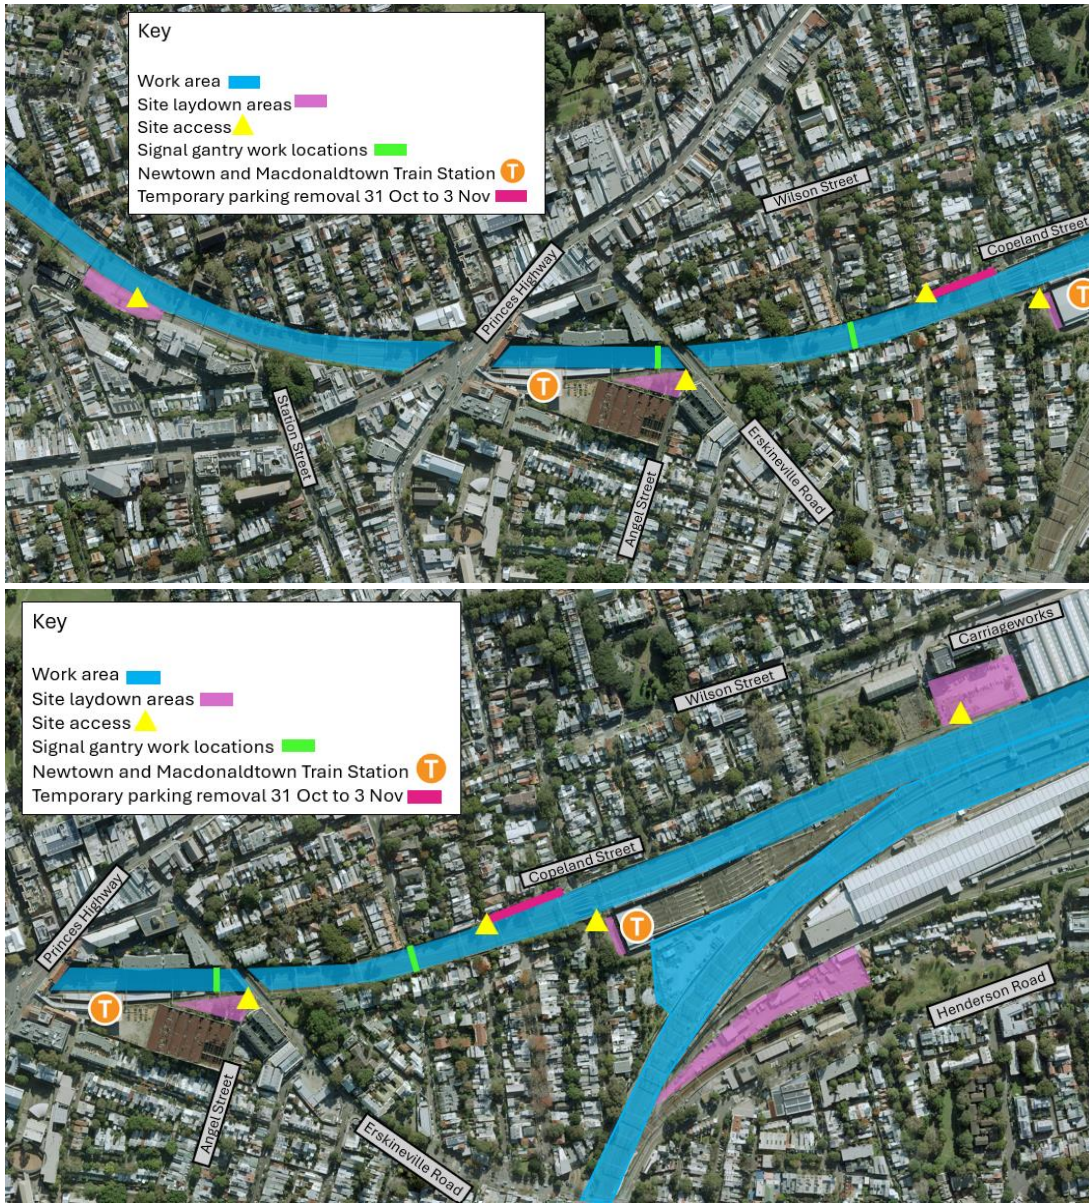

### Managing our impacts

We understand construction activities may cause disruption to our closest neighbours and every effort will be made to minimise impacts where possible, including:

- locating equipment as far away from residents and businesses as possible
- directing lighting towers downwards and away from residents
- conducting on site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration and dust management.
