# 1. INTRODUCTION

## 1.1 BACKGROUND

Roads and Maritime Services (Roads and Maritime), NSW commissioned Bitzios Consulting to undertake a trip generation and parking demand survey and analysis of Shopping centres less than 10,000m square GLFA with only one or two major tenants. The *Roads and Maritime Guide to Traffic Generating Developments – 2002* (hereafter referred to as the *Guide*), contains traffic generation and parking demand information based on surveys completed in 1980 and requires updating.

Roads and Maritime recognised that previous studies have looked at a large range of different sized sites generally towards city centres. Over the last 30 years there has been an expanding trend towards smaller suburban shopping centres in residential areas as well as extended/changing store opening hours. Roads and Maritime identified that new data is required focusing on shopping centres that are considered "Suburban" (less than approximately 10,000m square GLFA) due to potential differences in the trip generation and parking generation compared to larger or city focused shopping centres. Key considerations in identifying the need for this study include:

- an increased size of major tenants;
- a lower number of staff working per day due to the advancement of technology;
- longer opening hours;
- increases in car ownership;
- impacts of higher fuel costs;
- changing work and leisure patterns;
- increased awareness of child safety prompting more families driving children to school;
- increased number of shopping centres;
- increase in the number of offices/ medical centres at shopping centres;
- increase to the GLFA of major tenants;
- fewer specialty stores;
- generational change where driving distances reduce; and
- changing School-bound travel patterns.

## 1.2 SCOPE

The scope of this study included:

- identifying a suitable sample of small shopping centres within greater Sydney and NSW regional areas, with a sufficient sample size and development variety to provide confidence in the results;
- collecting relevant background data for each site (e.g. GLFA, number of employees, on-site parking provisions);
- surveying each site to collect all-mode trip generation data;
- assembling information on all-mode trip generation and parking demand data;
- tabulating and analysing the collected data to establish key statistical relationships; and
- presenting the results and recommendations in a Data Report and Analysis Report.

## 1.3 DEFINITION OF KEY TERMS

GFA – Gross Floor Area (m square)

GLFA – Gross Leasable Floor Area (m square)

Roads and Maritime – Roads and Maritime Services NSW

Trip Generation – Generation of trips undertaken by individuals, including pedestrian, cyclist or persons. It should be noted that a 'trip' is the movement of a vehicle or person from origin to destination (i.e. a 'complete' visit to the shops would equate to two (2) trips, 1 to the site and 1 from the site).

Traffic Generation – Individual vehicle trips regardless of number of persons within the vehicle.

Occupied Site Area – Total site area of the building based on aerial imagery.

### 1.3.1 GFA vs. GLFA

Gross Floor Area (GFA) and Gross Leasable Floor Area (GLFA) are often used in similar context and, as such, are sometimes misrepresented when used for shopping centre trip generation calculations.

- GFA is defined as the total area of all internal parts of a building (including walls) that are permanently covered.
- GLFA is defined as the total area that is "leasable", and excludes areas such as public toilets, walkways, open space and centre supply rooms.

Table 1.1 summarises a comparison of the GFA and GLFA provided by the surveyed sites (where available).

Table 1.1: Comparison of GFA and GLFA

| Site No. | GFA (m square) | GLFA (m square) | Difference (m square) | Percentage |
|---|---|---|---|---|
| 10 | 2,000 | 1,452 | 548 | 72.6% |
| 11 | 4,296 | 4,027 | 269 | 93.7% |
| 12 | 1,372 | 991 | 381 | 72.2% |
| 19 | 1,792 | 1,411 | 381 | 78.7% |
| 20 | 850 | 660 | 190 | 77.6% |
| | | | *Average* | *79%* |
| | | | *85th Percentile* | *84.7%* |

As seen in Table 1.1, on average the GLFA is 79% of the GFA, which is consistent with existing theoretical application (i.e. GLFA is 80% of GFA).

An additional comparison between Occupied Site Area and GLFA for all survey sites was undertaken to determine any other trends. Occupied Site Area is the total area of the building including the parts of the building which are not enclosed by the building (i.e. outdoor loading bay). Table 1.2 displays a comparison between the Occupied Site Area and GLFA from the sites investigated.

Table 1.2: Comparison of Occupied Site Area and GLFA

| Site No. | Occupied Site Area (m square) | GLFA (m square) | Difference (m square) | Percentage |
|---|---|---|---|---|
| 1 | 5,900 | 5,142 | 758 | 87% |
| 2 | 3,550 | 3,445 | 105 | 97% |
| 3 | 3,500 | 3,182 | 318 | 91% |
| 4 | 6,100 | 4,976 | 1,124 | 82% |
| 5 | 1,500 | 991 | 509 | 66% |
| 6 | 1,500 | 991 | 509 | 66% |
| 7 | 7,700 | 6,394 | 1,306 | 83% |
| 8 | 5,750 | 4,740 | 1,010 | 82% |
| 9 | 14,000 | 9,700 | 4,300 | 69% |
| 10 | 2,200 | 1,452 | 748 | 66% |
| 11 | 4,350 | 4,027 | 323 | 93% |
| 12 | 1,500 | 991 | 509 | 66% |
| 13 | 6,000 | 4,831 | 1,169 | 81% |
| 14 | 6,400 | 5,028 | 1,372 | 79% |
| 15 | 1,500 | 991 | 509 | 66% |
| 16 | 6,000 | 4,933 | 1,067 | 82% |
| 17 | 5,200 | 5,000 | 200 | 96% |
| 18 | 12,800 | 9,505 | 3,295 | 74% |
| 19 | 2,000 | 1,411 | 589 | 71% |
| 20 | 1,000 | 660 | 340 | 66% |
| | | | *Average* | *78%* |
| | | | *85th Percentile* | *91.3%* |

As seen in Table 1.2, on average the GLFA equates to approximately 78% of the Occupied Site Area. This is similar to the average difference between GLFA and GFA, however shows a greater variability between sites, as the Occupied Site Area includes all undercover areas from the building such as parking spaces, walkways, and loading bays. The smaller (0-3,000m square GLFA) and larger (8,000-10,000m square GLFA) sites are observed to have a low percentage difference, while “medium” (3,000-8,000m square GLFA) sites show that a large portion of the Occupied Site Area is leasable space.

## 1.4 PROJECT CHALLENGES AND RESPONSES

Table 1.3 summarises challenges that occurred throughout the data collection phase of the project and the steps taken to address them.

Table 1.3: Addressing Project Challenges

| Challenges | Steps Taken |
|---|---|
| Identifying sites that meet Roads and Maritime criteria (i.e. isolated from nearby commercial areas), particularly within the greater Sydney area. | Request for data from Property Council Australia database in NSW in combination with manual reviews of aerial imagery looking at shopping centres in suburban areas. Refer to Section 2.0 for more information. |
| Contacting site managers to gain permission to undertake surveys and receiving approval. Some information within the Property Council Australia database was outdated and some manually selected sites provided only contact with the storefront (not management). | Where possible centre manager contacts were found online. If not available, phones calls and emails to the major tenant store managers were made to obtain the centre manager information and approval. |
| On-site store managers unaware of survey being undertaken as they were not informed by the centre manager (primarily due to each store's internal management structure). | Upon contact, on-site store managers were provided with survey information, reassuring them that the questionnaires were very short and optional to the customer. In some instances, survey questionnaires were not undertaken at the manager's request. |
| Ensuring a *typical* day was surveyed for each site. The delay in some survey approvals required waiting for surveys to occur outside of school holiday periods. Further, unforeseen scheduling of an air show and filming of a television program caused car parks to be over utilised, and rescheduling of some surveys. | Affected survey days were rescheduled to later dates and data analysis process was expedited to ensure a timely delivery of the project. |
| Obtaining suitable site information. Some sites provided limited datasets while others did not respond to the request for data. | Along with phone calls and emails to the relevant contacts, information was obtained through the Property Council database, contacting the sites major tenant and online research.<br>A manual estimation method was used to determine staff numbers, refer Section 3. |
| The large number of surveys (3-4 days per site) increased the likelihood of data collection errors or corrupted datasets. | Where possible, additional surveys were undertaken to correct any data errors. All other errors were noted within the Data Report and were taken into consideration throughout the data analysis. |

# 2. SITE SELECTION

## 2.1 SELECTION CRITERIA

### 2.1.1 Roads and Maritime Criteria

The selection of the sites is based on the following criteria provided by Roads and Maritime:

- fairly recent developments, including a few older sites for comparison;
- ease in isolating the site from other developments (other businesses outside the shopping centre);
- one (1) or two (2) major tenants with up to 20 specialty sites;
- there is an on-site parking provision, which does not support the parking of nearby developments;
- 20 survey sites with a reasonable geographic spread and 11 in greater Sydney; and
- at least two (2) ALDI and IGA sites.

## 2.2 CANDIDATE SITE SELECTION

Candidate sites were selected by investigating sites from the Property Council Database and manually reviewing aerial imagery (Google maps and Nearmaps).

### 2.2.1 Property Council Database

Approximately 45 sites were reviewed in further detail from those sourced from the Property Council Database (NSW). Sites were primarily assessed based on site GLFA, if the parking lot supports nearby developments and the number of available on-site parking entrances and exits. Sites with a large amount of office space were also excluded. The final refined sites were then reviewed in accordance with the remaining Roads and Maritime criteria and provided to Roads and Maritime for approval. A total of 11 sites were selected for survey in this manner.

### 2.2.2 Manual Review of Aerial Imagery

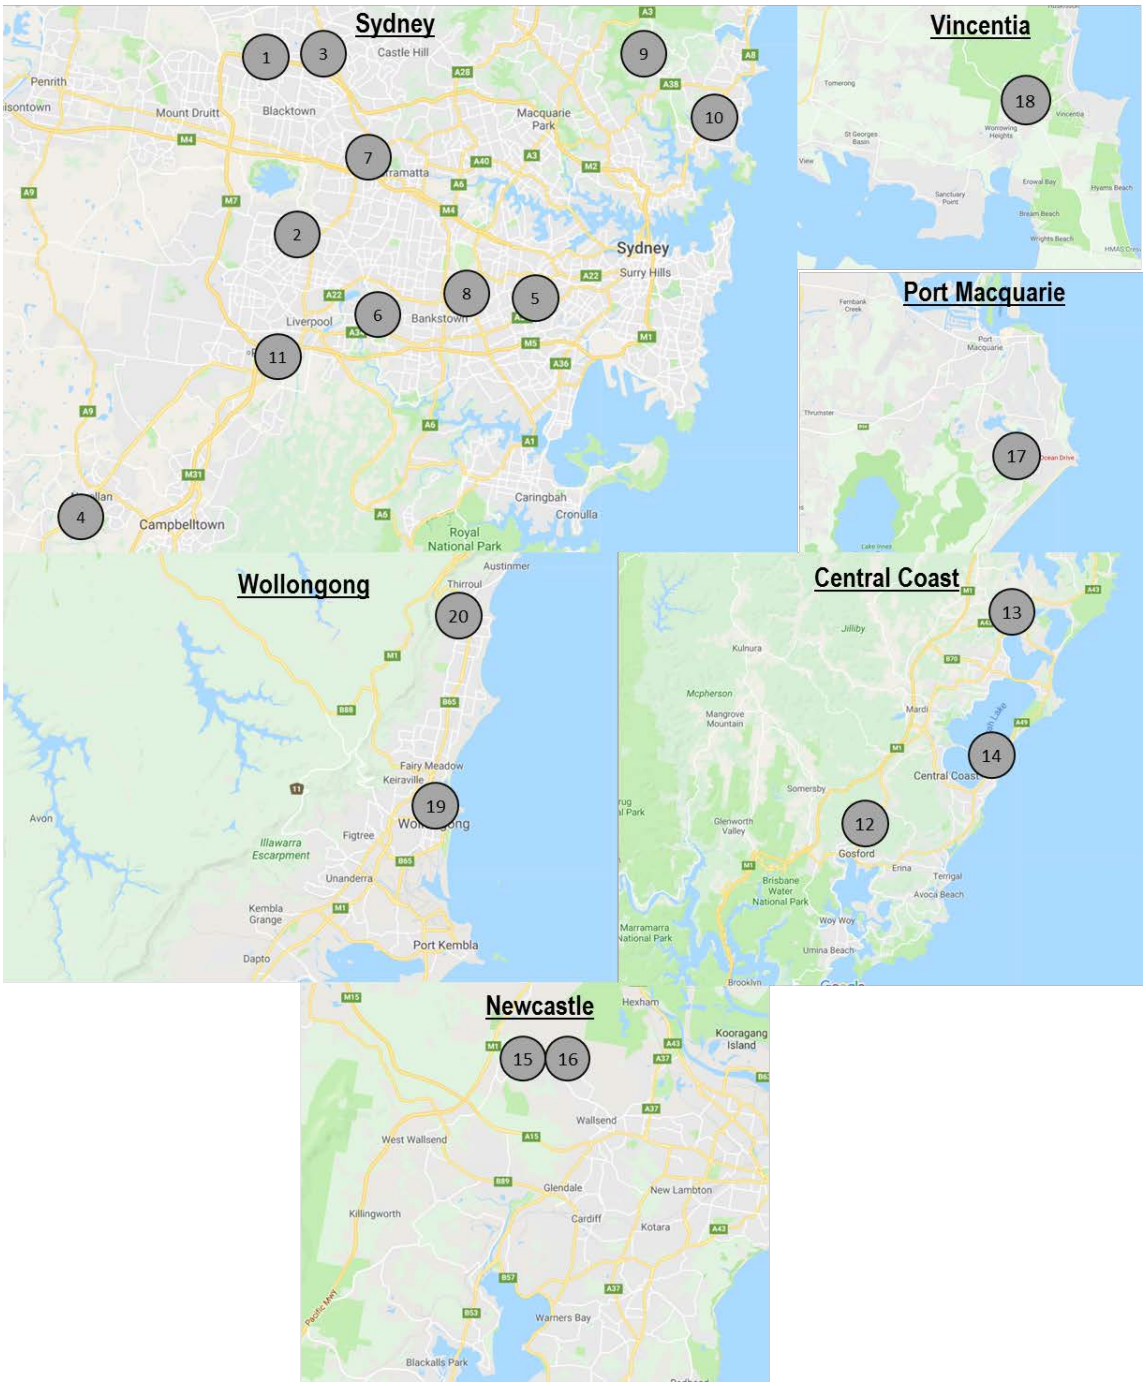
The remaining sites for survey were found through a manual review of aerial imagery and online shopping centre searches. Each was checked via the Roads and Maritime criteria for the sites for suitability. Of the approximately 30 sites reviewed, a total of 9 sites were selected for final surveys following approval from Roads and Maritime.

## 2.3 SELECTION BASIS

In order to ensure a comprehensive dataset for analysis, selected centres varied in size, type and location across Sydney and NSW. A survey of ALDI stores was specifically requested by Roads and Maritime due to their atypical development and trip generation when compared to historically common suburban shopping centres.

The proposed number of surveys selected by region and survey length is summarised in Table 2.1. Ten (10) of the selected sites were chosen to include an additional day of survey on a Sunday in order to provide a comparison with Saturday trip generation rates. This additional day was included due to the changing nature of shopping centres to remain open for longer hours on a Sunday.

Table 2.1: Proposed Surveys and Location Summary



| | Sydney | Regional | | | | Total |
|---|---|---|---|---|---|---|
| | | Newcastle | Central Coast | Wollongong | Other | |

# 3. SURVEY PROCEDURE

## 3.1 SURVEY SCHEDULE

Of the surveys undertaken 10 were performed over 3 days and 10 over 4 days. As outlined in Section 2.3 this aimed to provide a comparison between Sunday and Saturday trip rates. ALDI sites are noted to have "Special Buy" days for products on Wednesdays and Saturdays, as such three ALDI (3) site surveys (Bankstown, Canterbury and Fletcher) were undertaken on Wednesday instead of a Thursday.

The duration of the surveys is based on the span of the centre's opening hours and survey staff availability. Typical times for each survey day were as follows:

- Wednesday: 8:30 am – 6:00 pm;
- Thursday: 8:30 am – 9:00 pm;
- Friday: 8:30 am – 6:00 pm;
- Saturday: 8:30 am – 5:00 pm; and
- Sunday: 8:30 am – 5:00 pm.

It should be noted that frontage road and driveway tube count data was collected for 24-hours across all survey days. The surveys were conducted as shown in Table 3.1.

## 3.2 DATA COLLECTION SURVEYS

The following data was collected during the surveys:

- a count of on-site parking and provisions;
- number of entering and exiting vehicles (cars/heavy vehicles) (in 15-minute periods);
- number of vehicle occupants (in 15-minute periods);
- number of pedestrians and cyclists (in 15-minute periods);
- the time that a vehicle enters the site (in 15 minute periods);
- the number of vehicles passing the site (in 15-minute blocks); and
- an automatic tube count of all vehicles entering the site for 7 days, including the survey period.

In addition to the above data, all sites were manually surveyed for vehicle and parking occupancy as well as to ask customers five (5) questions aimed at determining customer mode of transport and trip purpose. The questions included:

1. "What mode of transport did you use to get here?"
2. "If arrived by car, is the vehicle parked on site or elsewhere?"
3. "Do you work in the centre or are you a customer?"
4. "Is visiting the shopping centre the sole purpose of your trip or have you been/going to other places?"
5. "How long is your visit to the centre today?"

## 3.3 SITE INFORMATION

The following site information was collected for each site (where available):

- Gross Floor Area (GFA) or Gross Leasable Floor Area (GLFA);
- number of staff each survey day (where available);
- site plan of the premises (where available);
- pedestrian access points;
- vehicle entrance and exit locations and location of parking spaces (e.g. underground);
- breakdown of on-site parking allocation and provisions;
- commercial parking availability on site; and
- centre opening hours.

### 3.3.1 Collection Methods

The data was collected using four (4) different sources, as follows:

- by contacting the centre manager / owner;
- through the Property Council Database;
- by manually researching information and estimating staff numbers; and
- through survey information collected by TDC.

*Centre Manager / Centre Owner*

The following additional site information was requested from each store during the approval process:

- breakdown of on-site parking allocation and provisions;
- employee numbers on weekdays / weekends;
- typical busiest day of operation;
- the peak hours of shopper arrival;
- site plan of the premises;
- cost of parking;
- total GLFA and/or GFA;
- year of opening; and
- most recent year renovated.

This information was however not always provided, as majority of the centre managers did not have access to the information. Some information was also provided as an approximation.

*The Property Council Database*

Where information was not available from the centre management, the Property Council Database was used. This however did not provide information on all the sites and lacked some of the information required.

*Manual Research and Estimation*

Where site information was not available from the above sources aerial imagery and site plans obtained through Council databases was used. Staff numbers were estimated by combining the information provided by centre managers, major tenant management and a manual estimation method. Table 3.2 summarises the staff numbers provided by the centre and store managers.

Table 3.2: Employee Numbers provided by Centre and Major Tenant Managers

*1) Coles Fletcher Village has a comparatively high number of staff. This is due to the use of the centre as the local grocery online distribution point.*

*2) Sites with only one tenant – Stand Alone Centres*

Stand-alone sites (i.e. major tenant only), utilised the above staff numbers. For those sites with minor tenants within the centres, staff numbers were estimated based on a combination of centre manger information (where provided) and based on a minor tenant use category's summarised in Table 3.3.

Table 3.3: Minor Tenant Employee Number Estimation

| Store Breakdown | Approximate Employees per shift | Approximate Shifts per day | Approximate Employees per Weekday |

The general breakdown of the minor tenants within each site was researched and grouped into the categories shown in Table 3.3 to estimate number of minor tenant staff for each site (refer Appendix A for number of minor tenants per site). Each sites' minor and major tenant staff numbers were combined to establish final estimated values used for calculation and analysis purposes. The final employee numbers are provided in Table 3.4.

*1) Quakers Court values were estimated by taking an average of the calculated values and the ones provided from the centre manager survey.*

*2) Coles Manly Vale staff numbers estimated based on similar sized stand-alone sites and other Coles staff numbers provided with similar Major Tenant GLFA.*

It should be noted that a conservative estimate of 10% less employees on weekends was assumed based on sites where staff numbers were provided by centre managers.

*Survey Data*

Accurate parking breakdowns were determined as part of the survey. The survey team collected the development and frontage road traffic data along with manual survey counts and customer questionnaires. During the course of data collection, review and analysis a number of errors within the collected data were found, Table 3.5 summarises each error and the steps taken to address them. Full survey datasets are provided at Appendix B.

Table 3.5: Addressing Errors in Survey Data

| Data Error | Steps Taken | Sites Impacted |
|---|---|---|
| Errors existed in the tube counts data for vehicles entering sites when entering traffic volumes were over approximately 20 vehicles every 15minutes. This was due to slow vehicle speeds and angled/turning vehicles over tube counters. | Manual counts were taken for entering vehicles by a member of the survey team. These values were utilised in place of tube counts for all data calculations and analysis. | All sites during opening hours |
| Tube count data was unavailable for Site 14 – Lakeside Shopping Centre due to survey errors. | Exiting vehicle movements were not calculated hourly and assumed as equal to manually surveyed entering trips for peak and daily calculations. It should be noted that a comparison of IN/OUT movements across all other sites found this to be an accurate estimation of typical vehicle movements. | Site 14 |
| Due to entering vehicle tube count errors parking accumulation was inaccurate during higher volume periods (i.e. most opening hours). | Manually surveyed entering vehicle counts were utilised in conjunction with exiting tube count volumes where possible. Some balancing errors still existed for sites where hourly in/out movements were inaccurate though the day, data during these times was excluded for parking analysis. | Sites with partial errors included 5, 6, 13, 17 and 20. |
| Car Park occupancy not counted at beginning of manual survey | Estimated based on tube counts from midnight prior to centre opening and parking accumulation throughout the day | Sites 1, 2, 3 and 18 |

# 4. SURVEY RESULTS

## 4.1 OVERVIEW

A large amount of survey data was collected from each site. This report contains a summary of select data. Alongside daily trip data, on the weekdays (Wednesday, Thursday and Friday) each sites' AM and PM peak periods are reviewed and a single peak period (typically Midday) is reviewed on weekends (Saturday and Sunday). Preliminary data analysis summaries for all individual outlets are contained in Appendix A and include site information, trip generation derived from both traffic counts and manual survey results, parking, frontage road traffic counts and development traffic mode splits. Complete survey data sets for individual sites, as completed by TDC, are provided in Appendix B.

## 4.2 PRELIMINARY ANALYSIS AND KEY STATISTICS

The key outputs of the surveys including factors that impact the road network such as vehicle and person trip generation, development and frontage road peak periods, Gross Leasable Area (GLFA) and pedestrian trips have been summarised in this section.

### 4.2.1 Initial Site Analysis

An initial site analysis has been undertaken to identify any overarching trends within the survey data that will inform further detailed analysis and regression models to be completed in the subsequent Data Analysis Report. Additionally, more focused review of the daily person trip rate per 100m square of GLFA for both weekdays and weekends was undertaken, as shown in Figure 4.2 and Figure 4.2 respectively.

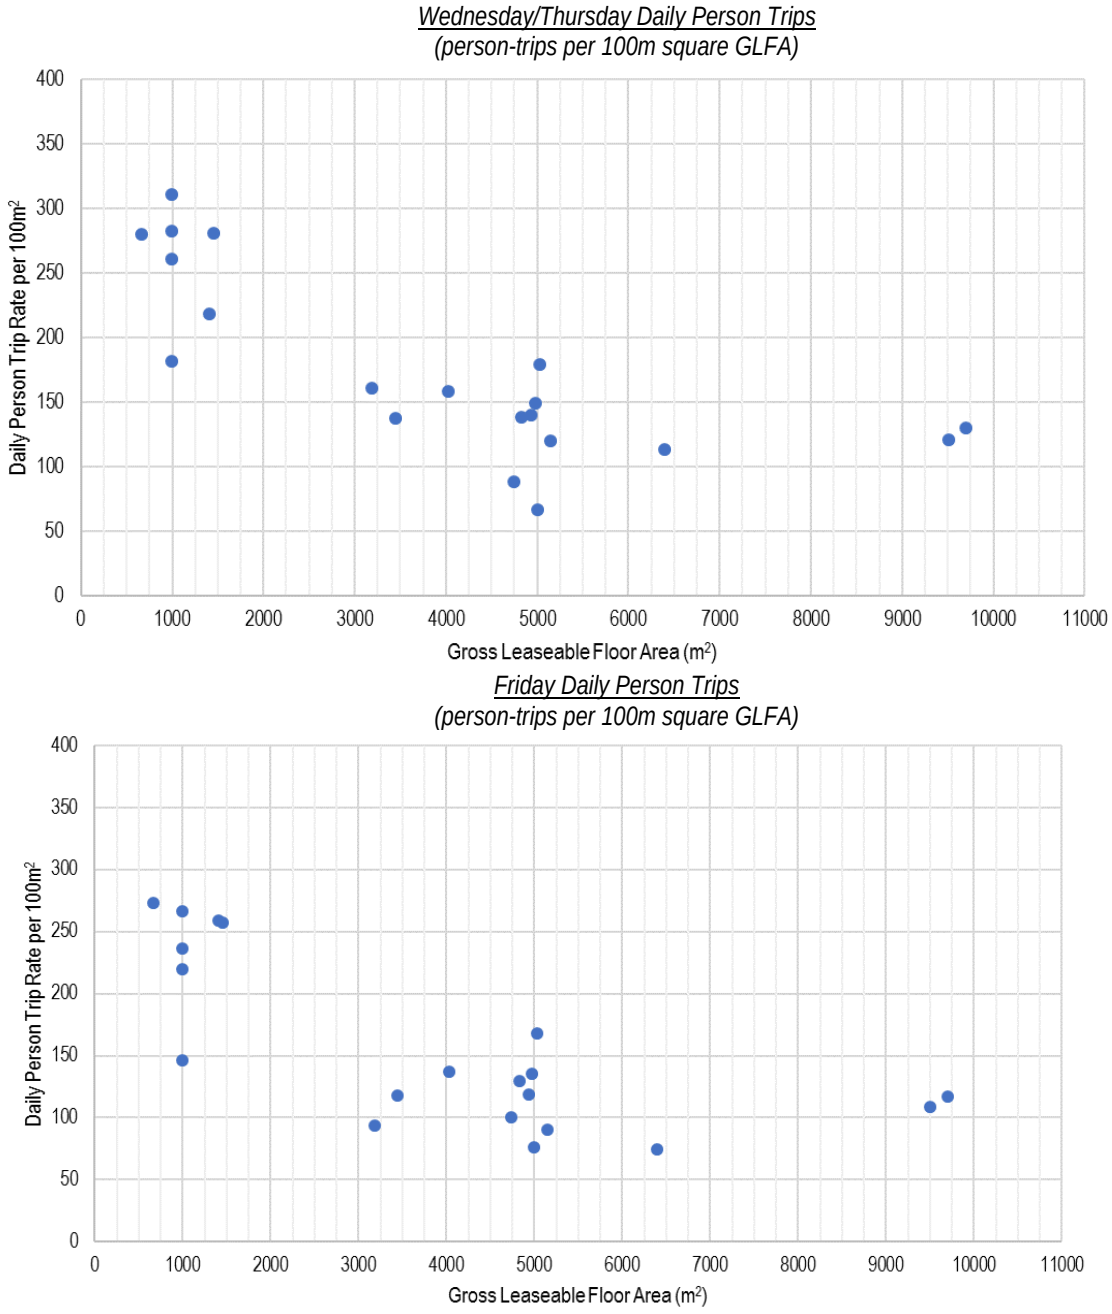

Figure 4.1: Weekday Daily Person Trip Rate per GLFA vs Gross Leasable Area – All Sites

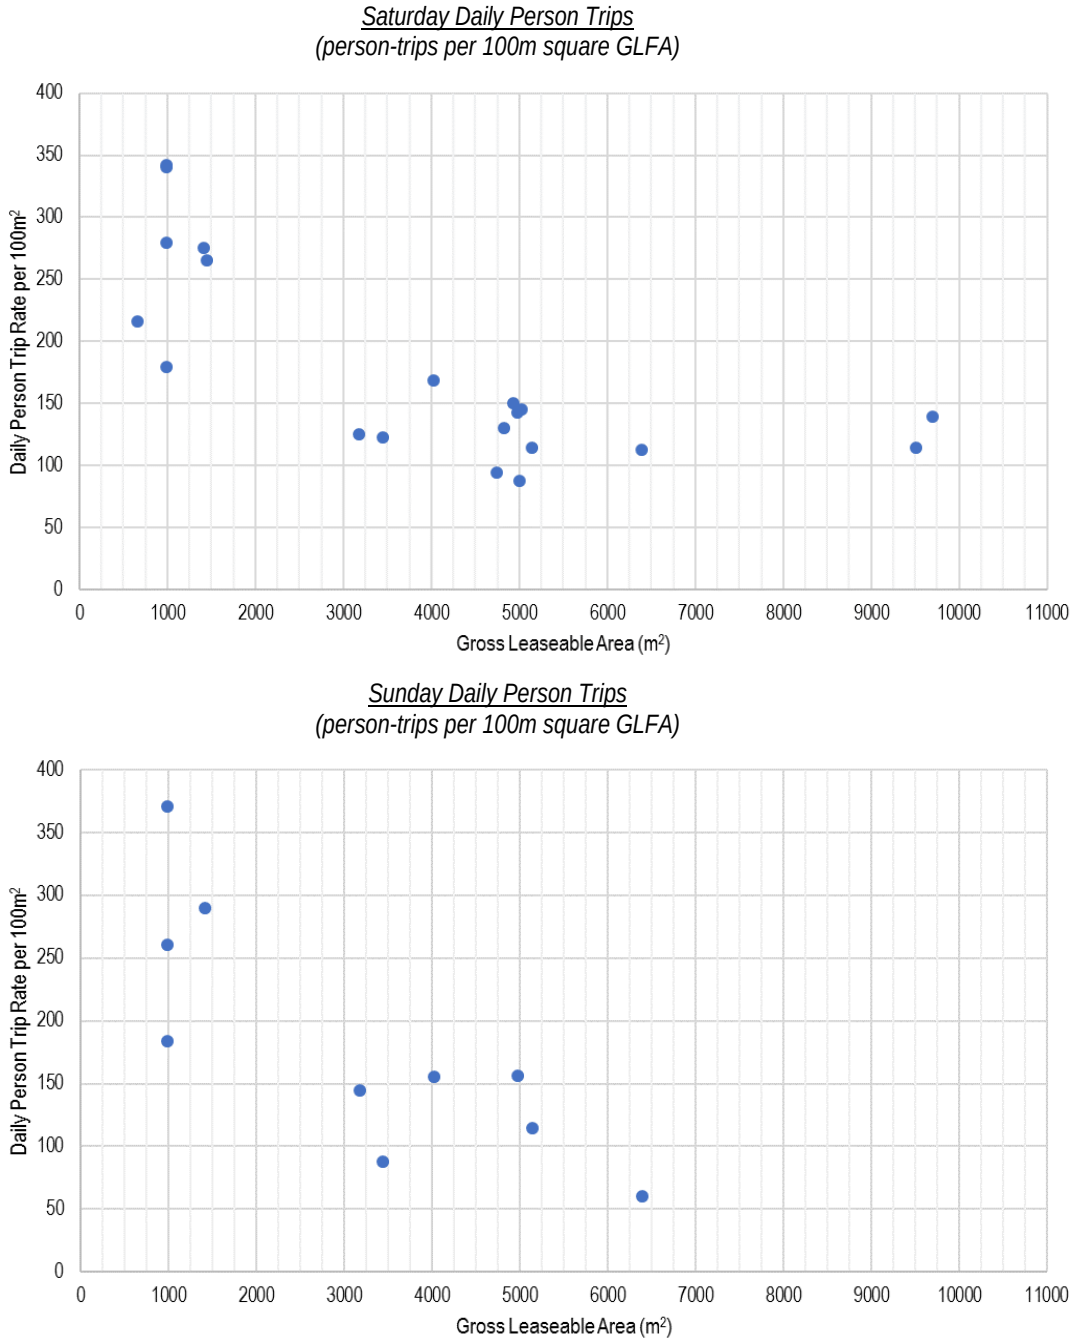

Figure 4.2: Weekend Daily Person Trip Rate per GLFA vs Gross Leasable Area – All Sites

Figure 4.2 and Figure 4.2 show that, of the sites surveyed, those with a GLFA of less than 2,000m square consistently have significantly higher trips generated per 100m square of GLFA than other sites across all surveyed days. It is noted that five (5) of the sites less than 2000m square GLFA are ALDI's and further surveys of a broader range of 'small' centres is recommended to gain a better understand of the tropical tip generation at stores of this size.

A direct comparison between those sites with a GLFA of less than 2,000m square and those with a GLFA of greater than 2,000m square is shown in Table 4.1.

Table 4.1: Average Daily Vehicle Trips per 100m square GLFA for each site category

| GLFA | Wednesday/Thursday | Friday | Saturday | Sunday |
|---|---|---|---|---|
| <2,000m square | 88.072 | 78.996 | 79.137 | 80.242 |
| >2,000m square | 177.198 | 163.785 | 169.200 | 164.304 |

Considering this, a separate analysis for sites in the following categories is appropriate:

- 0m square - 2,000m square of GLFA (<2,000m square); and
- 2,000m square – 10,000m square of GLFA (>2,000m square).

A comparison between the Saturday and Sunday survey sites peak and daily vehicle and person trips, shown in Figure 4.3, Figure 4.5 and Figure 4.6 respectively, found that trip generation was mostly consistent across both weekend days. The only significant difference occurred in the number of person trips at Site 7 (Wentworthville), potentially indicating a higher number of walk-up or alternative transport trips on a Saturday at this location.

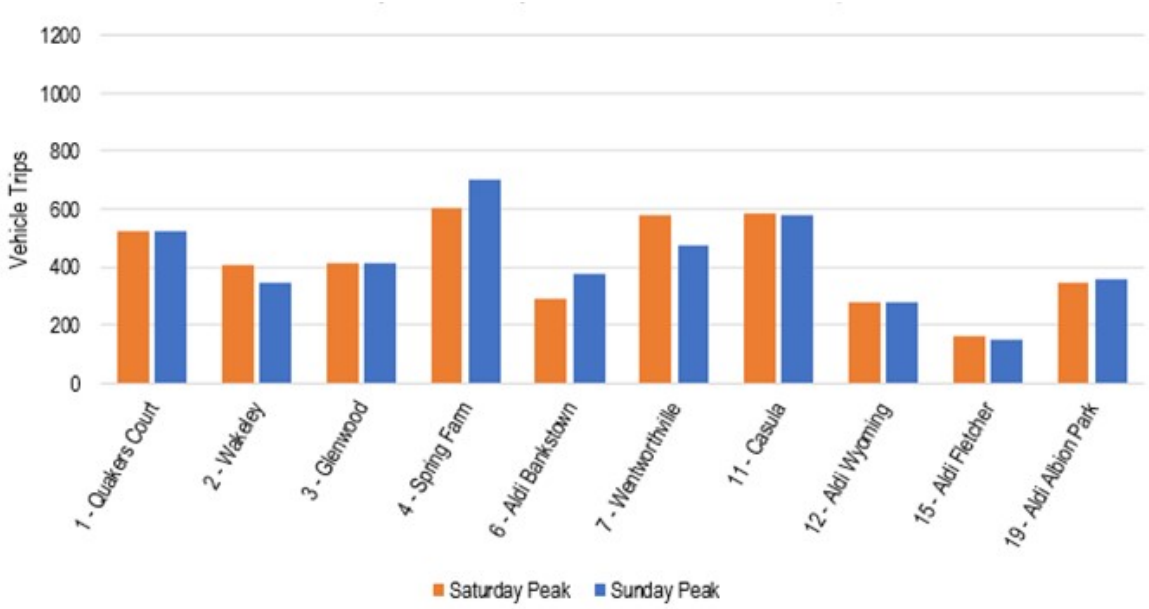

Figure 4.3: Weekend Peak Vehicle Trips Comparison

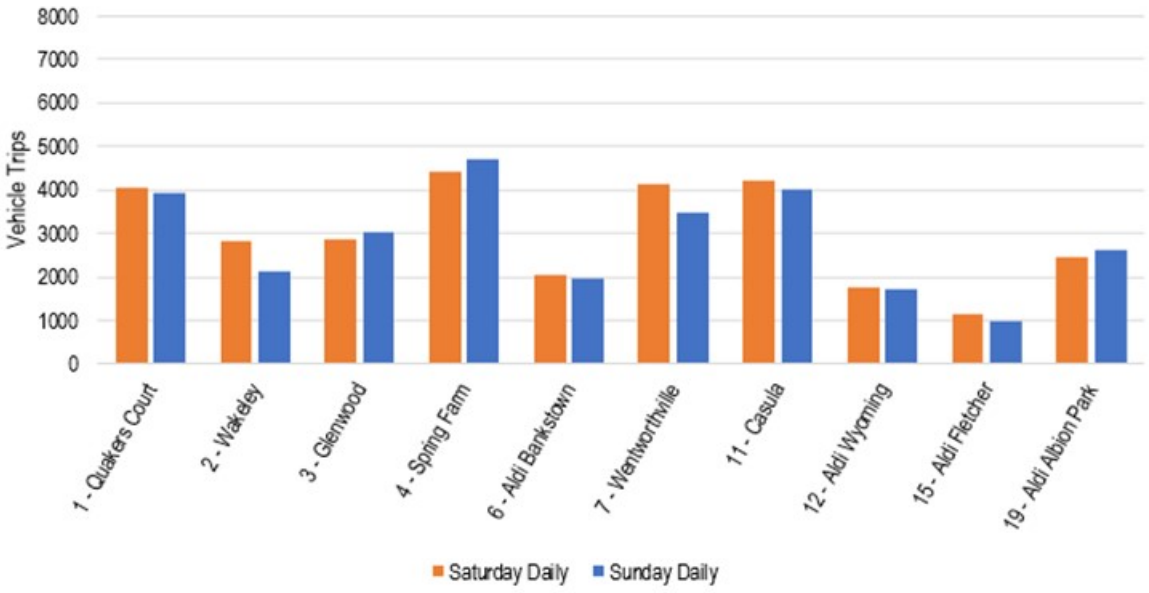

Figure 4.4: Weekend Daily Vehicle Trips Comparison

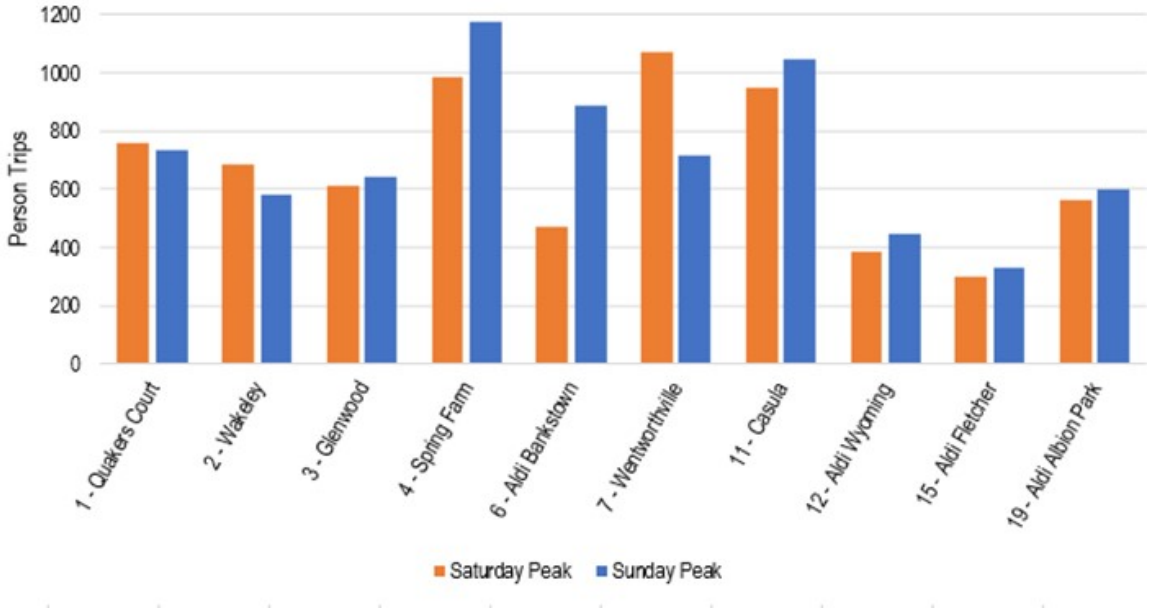

Figure 4.5: Weekend Peak Person Trips Comparison

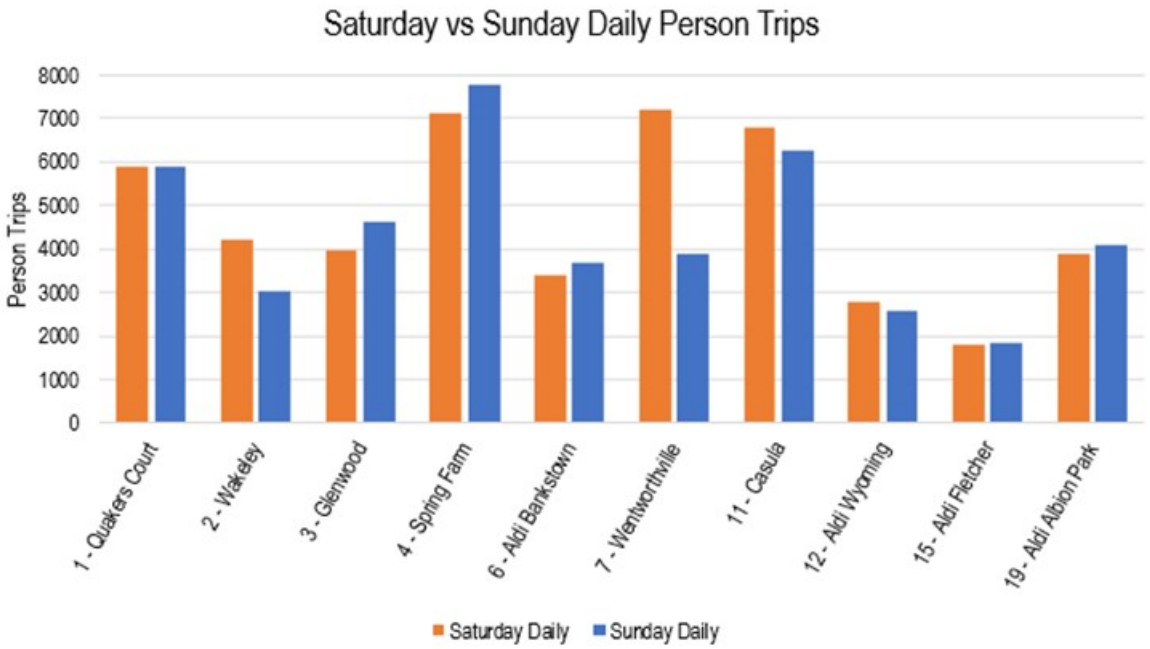

Figure 4.6: Weekend Daily Person Trips Comparison

The similarities in vehicle trips generated on Saturday and Sunday suggests that the detailed analysis (i.e. linear and multiple regression) focus on a single weekend rate, as part of the subsequent analysis report.

### 4.2.2 Centres less than 2,000m square GLFA

Surveys conducted for sites with less than 2,000m square GLFA have been examined for each survey day to identify key findings and trends in trip generation and associated factors. Complete site data details can be found at Appendix A.

Three (3) of the ALDI sites were surveyed on a Wednesday to capture any significant differences in in trip generation on what is designated a “Special Buy” day and a typical Thursday. A comparison of the Wednesday and Thursday survey results at ALDI sites found that trip generation was similar enough to combine for data review and analysis purposes.

*Wednesday/Thursday*

The following section combines sites surveyed on Wednesdays and Thursdays. Figure 4.7 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes for all sites with less than 2,000m square of GLFA.

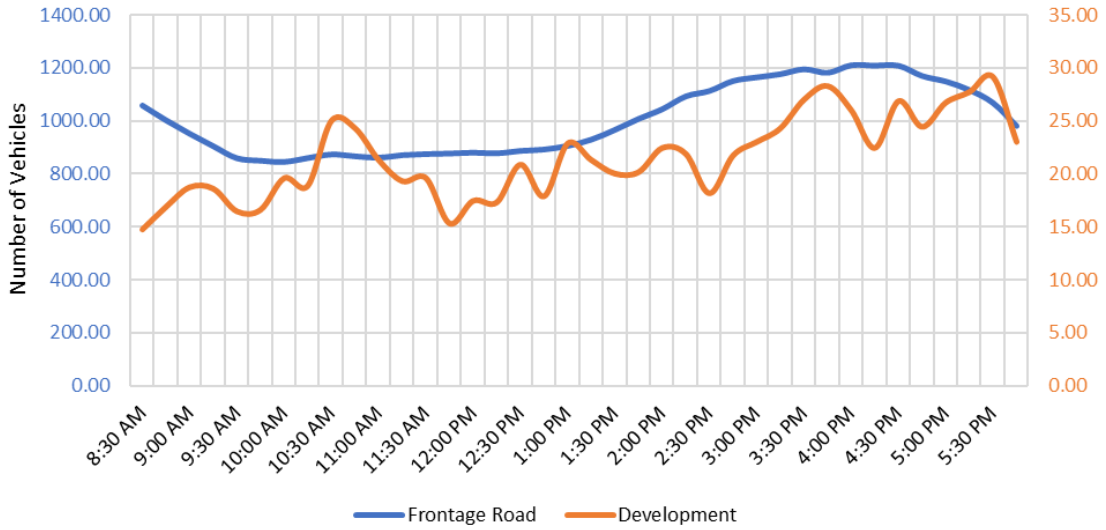

Figure 4.7: Average Thursday/Wednesday Development and Frontage Road Traffic Volumes (<2,000m square GLFA)

Examination of data indicates that Wednesday and Thursday morning (AM) one-hour peak periods are typically between 10.00am-11.30am, while the average afternoon (PM) peak occurs between 4.00pm-6.00pm. As shown in Table 4.2, the PM peak period varies significantly across the sites surveyed though the majority show a peak period beginning at 4.00pm.

Table 4.2 provides an initial summary of the Wednesday and Thursday surveys for each site.

Initial examination of the Wednesday/Thursday data for site less than 2,000m square GLFA indicates that:

- when compared to the frontage road peak periods, the sites' peak periods typically differed by 1-2hours;
- the AM peak vehicle trips per 100m square GLFA have an average of 17.42, with data points ranging from 10.09 to 21.09;
- the PM peak vehicle trips per 100m square GLFA have an average of 21.96, with data points ranging from 15.14 to 24.59;
- AM peak trip rates were noted as lower than those during the PM peak for both vehicle and person trips; and
- the percentage of pedestrians varied considerably between sites and does not appear to relate to vehicle trip rates.

*Friday*

The following section reviews Friday survey data for sites' less than 2,000m square GLFA. Figure 4.8 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes.

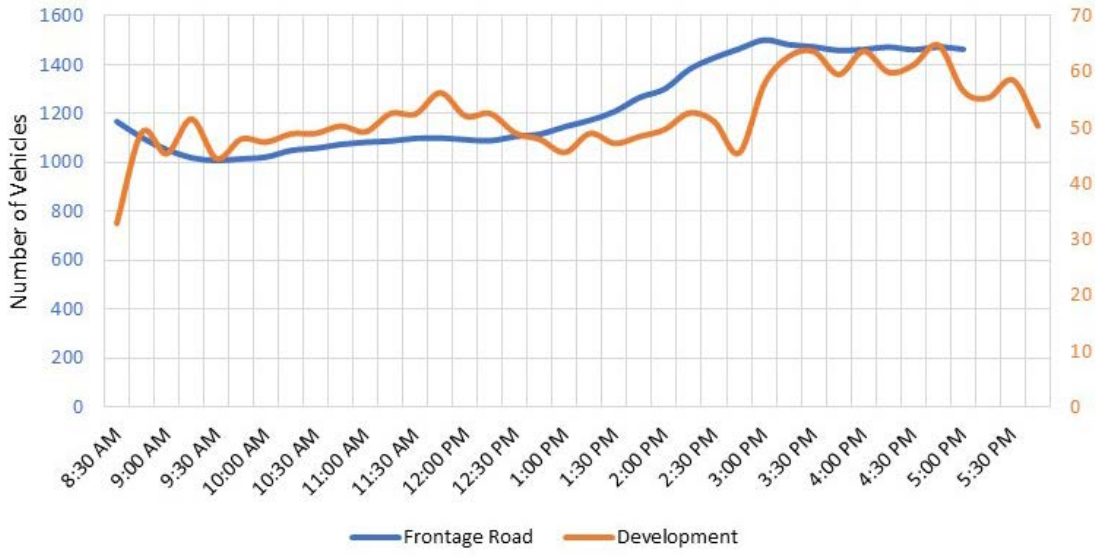

Figure 4.8: Friday Development and Frontage Road Traffic Volumes (<2,000m square GLFA)

Examination of data indicates that Friday morning (AM) one-hour peak periods are typically between 10.00am-12.00pm, while the average afternoon (PM) one-hour peak occurs between 3.30pm-5.00pm. As shown in Table 4.3, the PM peak period varies across the sites surveyed though the majority show a peak period beginning at 4.00pm, while AM peak periods consistently occur near midday.

Table 4.3 overleaf provides an initial summary of the Friday surveys for each site.

- the percentage of pedestrians varied considerably between sites and does not appear to relate to vehicle trip rates.

*Saturday*

The following section reviews Saturday survey data for sites' less than 2,000m square GLFA. Figure 4.9 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes.

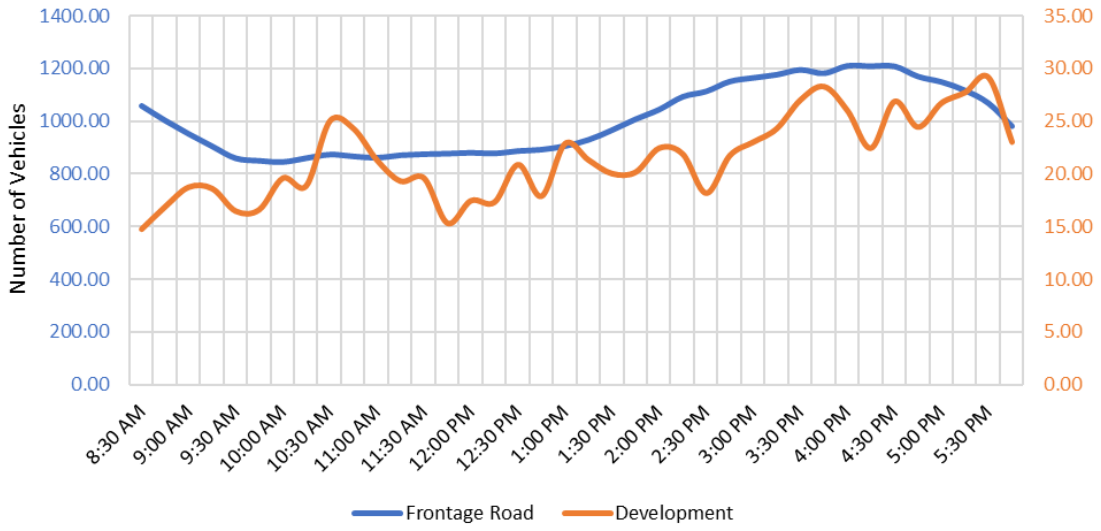

Figure 4.9: Saturday Development and Frontage Road Traffic Volumes (<2,000m square GLFA)

Examination of data indicates that the Saturday one-hour peak period is typically between 11.00am-12.00pm or 3.00pm and 5.00pm. As shown in Table 4.4, the peak periods for both development traffic and frontage roads varies across each of the sites surveyed.

Table 4.4 provides an initial summary of the Saturday surveys for each site.

Initial examination of the Saturday data for sites greater than 2,000m square GLFA indicates that:

- when compared to the frontage road peak periods, the sites' peak periods typically differed by at least 2 hours;
- the peak vehicle trips per 100m square GLFA have an average of 24.95, with data points ranging from 16.15 to 29.26;
- weekend peak trip rates were noted as higher than those during all weekday peak periods for both vehicle and person trips; and
- the percentage of pedestrians is more consistent between sites however, does not appear to relate to vehicle trip rates.

*Sunday*

The following section reviews Sunday survey data for sites' less than 2,000m square GLFA. As outlined in Section 2, Sunday surveys were undertaken at a limited number of sites to provide comparison with Saturday data and confirm the typical trend of weekend consistent trip data across both weekend days. There are four (4) Sunday surveyed sites with less than 2,000m square of GLFA.

Figure 4.10 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes.

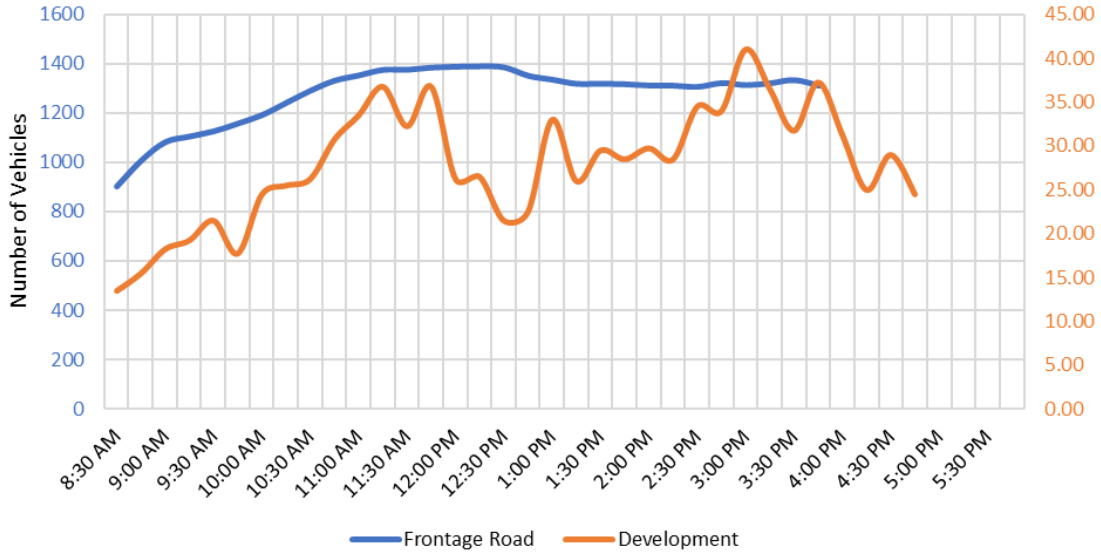

Figure 4.10: Sunday Development and Frontage Road Traffic Volumes (<2,000m square GLFA)

Examination of data indicates that the Sunday one-hour peak period is typically between 11.30am-2.00pm. As shown in Table 4.5, the peak periods for both development traffic and frontage roads varies across each of the sites surveyed.

Table 4.5 provides an initial summary of the Sunday surveys for each site.

**Not surveyed on a Sunday*

Initial examination of the Saturday data for sites greater than 2,000m square GLFA indicates that:

- when compared to the frontage road peak periods, the sites' peak periods typically differed by only 30-90mins;
- the peak vehicle trips per 100m square GLFA have an average of 26.66, with data points ranging from 15.04 to 37.74;
- weekend peak trip rates were noted as higher than those during all weekday peak periods for both vehicle and person trips;
- as expected Sunday trip generation is similar to Saturday; and
- the percentage of pedestrian trips is consistent across all Sunday sites.

### 4.2.3 Centres greater than 2,000m square GLFA

Surveys conducted for sites with greater than 2,000m square GLFA have been examined for each survey day to identify key findings and trends in trip generation and associated factors.

*Thursday*

The following section reviews sites surveyed on Thursday with greater than 2,000m square of GLFA. Figure 4.11 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes.

Figure 4.11: Thursday Development and Frontage Road Traffic Volumes (>2,000m square GLFA)

Examination of data indicates that Thursday morning (AM) one-hour peak periods are typically between 8.00am-10.00am, while the average afternoon (PM) one-hour peak occurs between 3.30pm-5.00pm. As shown in Table 4.6, the AM and PM peak periods vary across the sites surveyed, with a number of sites displaying a single peak period that occurs near midday.

Table 4.6 overleaf provides an initial summary of the Thursday surveys for each site.

*Sunday*

The following section review sites surveyed on Sunday with greater than 2,000m square of GLFA. As outlined in Section 2, Sunday surveys were undertaken at a limited number of sites to provide comparison with Saturday data and confirm the typical trend of weekend consistent trip data across both weekend days. There are six (6) Sunday surveyed sites with greater than 2,000m square of GLFA.

Figure 4.14 compares the average development specific hourly traffic with the average adjacent frontage road traffic volumes. It should be noted that some errors in data collected have cause the average Frontage Road trips to be relevant between 8.30am and 4.00pm only, however traffic volume trends are still clear.

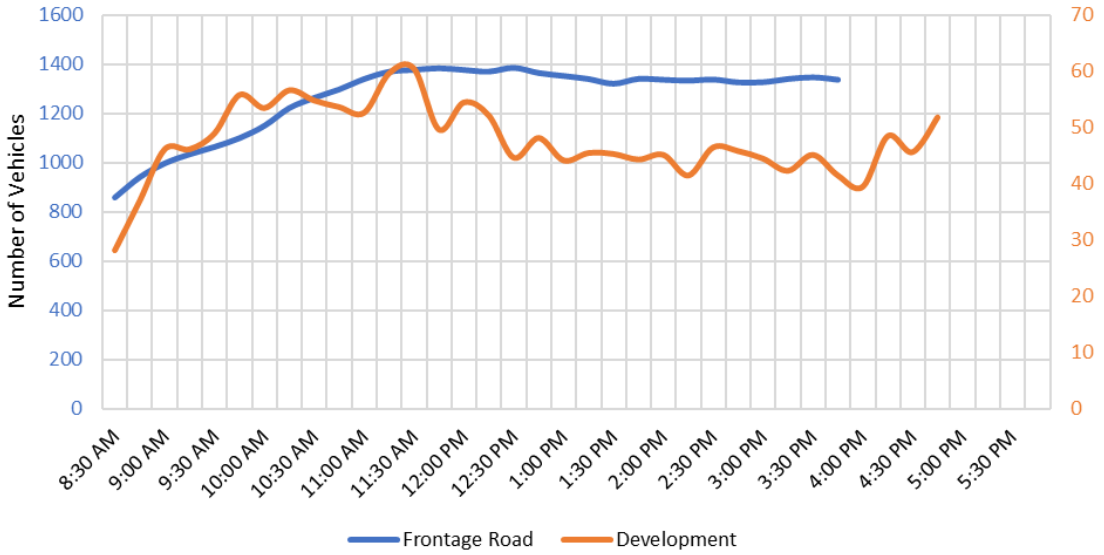

Figure 4.14: Sunday Development and Frontage Road Traffic Volumes (>2,000m square GLFA)

Examination of data indicates that the Sunday one-hour peak period is typically between 10.00am-12.00pm. As shown in Table 4.9, the peak periods for development traffic and frontage roads varies across each of the sites surveyed.

Table 4.9 provides an initial summary of the Sunday surveys for each site.

Initial examination of the Sunday data for sites greater than 2,000m square GLFA indicates that:

- when compared to the frontage road peak periods, the sites' peak periods typically differed by 1- 2 hours;
- the peak vehicle trips per 100m square GLFA have an average of 11.51, with data points ranging from 7.40 to 14.38;
- weekend peak trip rates are only slightly higher than those during weekday PM peak periods for both vehicle and person trips;
- as expected Sunday trip generation is similar to Saturday; and

- the percentage of pedestrians varied considerably between sites however, aligns with each sites' vehicle trip rates.

## 4.3 SURVEY SITES PEAK PERIOD TRIP COMPARISON

### 4.3.1 Centres less than 2,000m square GLFA

In Section 4.2, the summary data for each site with less than 2,000m square GLFA was presented, including site peak hour traffic generation per 100m square GLFA for individual development peak times. Figure 4.15, Figure 4.16, Figure 4.17 and Figure 4.18 compare the traffic generation across each site, including an average for comparison, for the Wednesday/Thursday, Friday, Saturday and Sunday peak periods respectively.

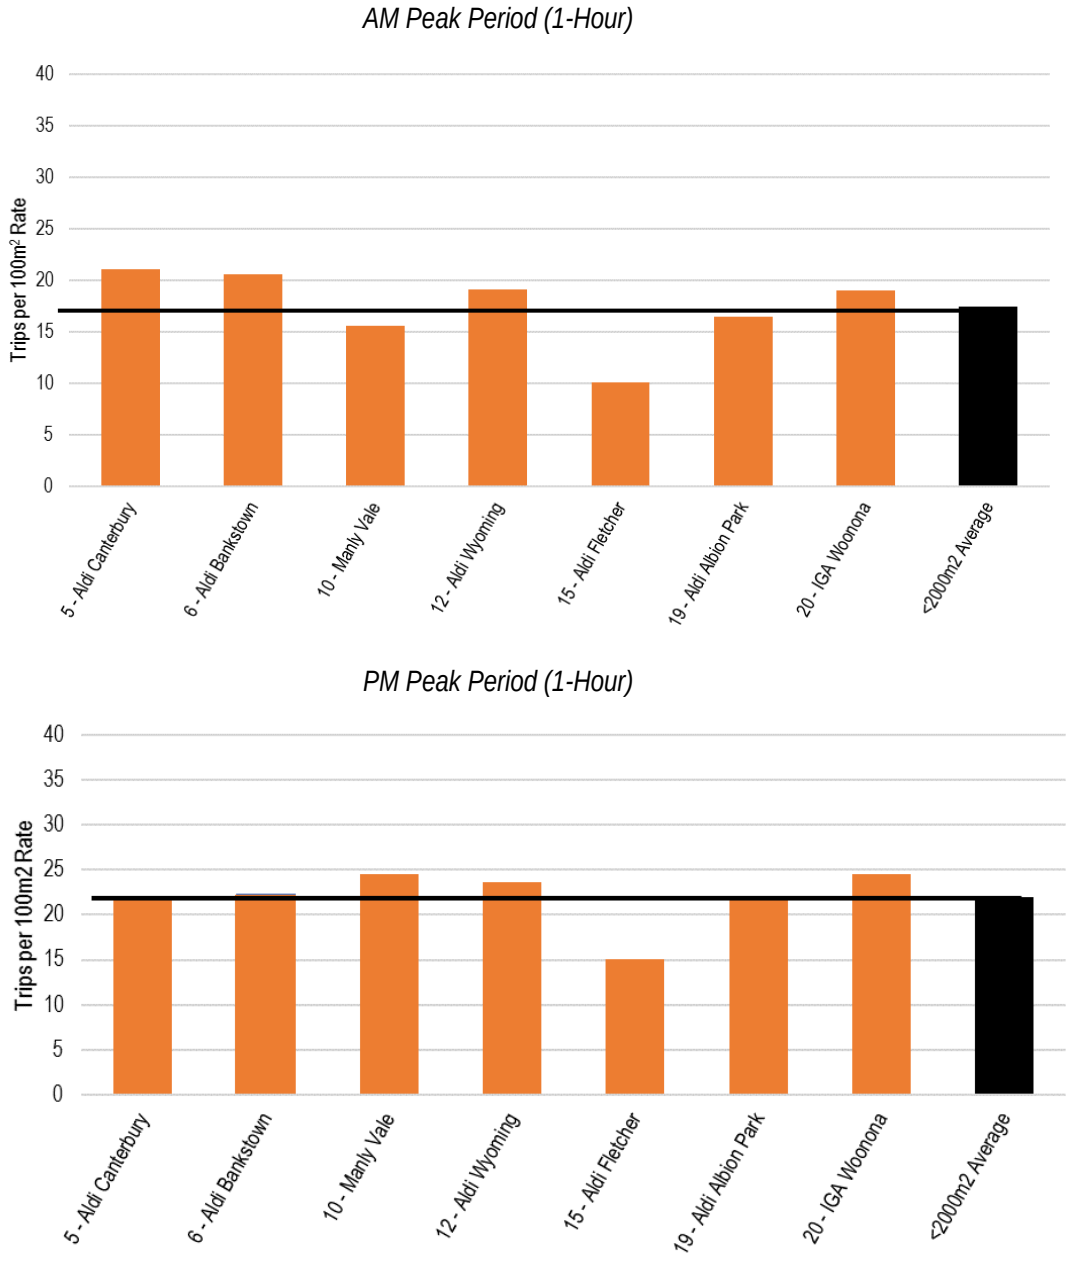

Figure 4.15: Wednesday/Thursday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - <2,000m square

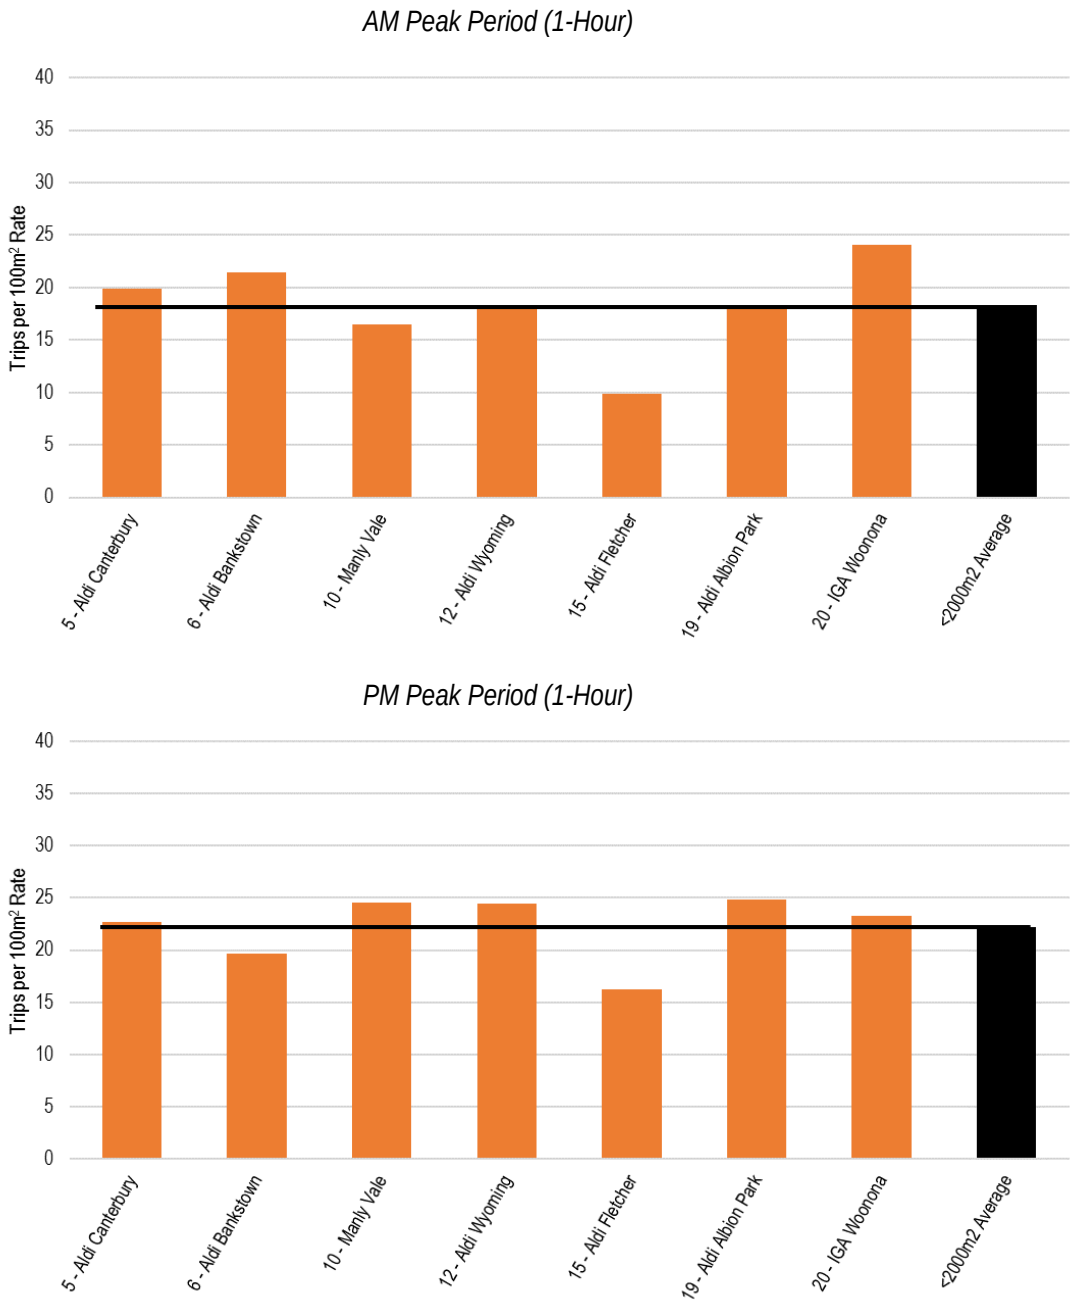

Figure 4.16: Friday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - <2,000m square

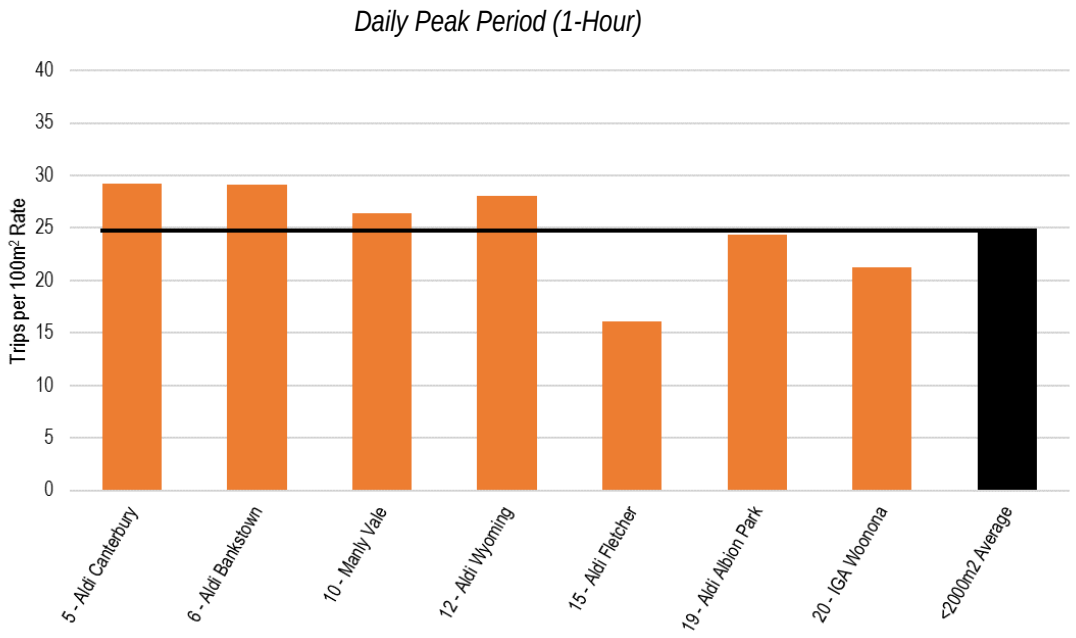

Figure 4.17: Saturday Vehicle Trip Rate (per 100m square GLFA) Peak Period - <2,000m square

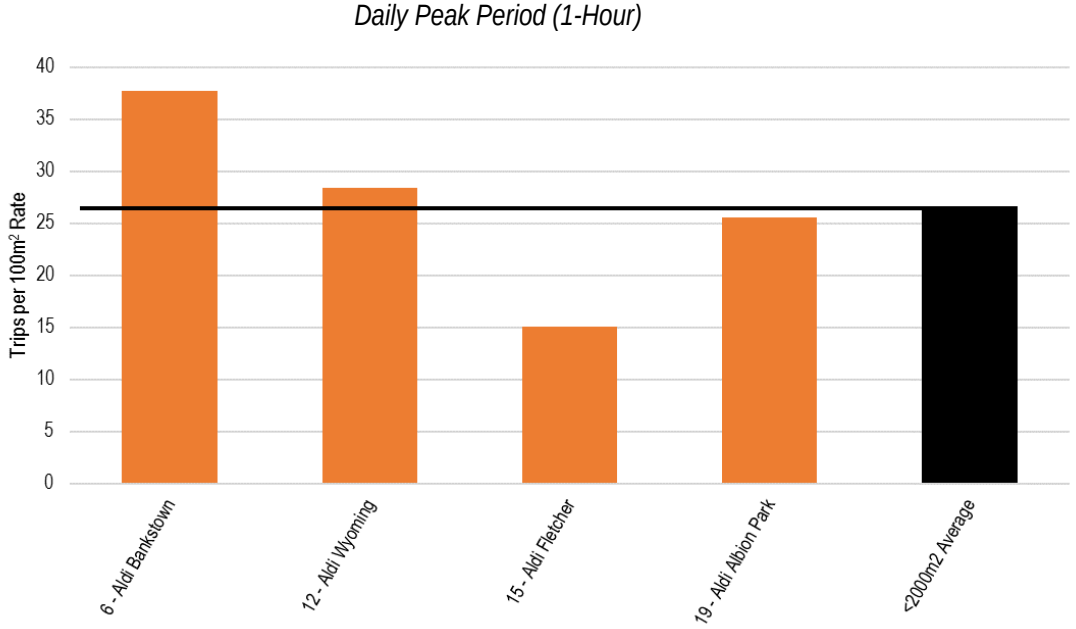

Figure 4.18: Sunday Vehicle Trip Rate (per 100m square GLFA) Peak Period - <2,000m square

Initial examination of the above shows that:

- during weekdays sites show higher vehicle trip generation during PM peak period with AM peak times having slightly greater variation in trips generated across the sites;
- on average the weekend peak vehicle trip generation is highest, showing a difference from weekday AM and PM peak periods;
- each “stand-alone” ALDI site (Sites 5,6, 12 and 15) has the same Gross Leasable Area however, Site 15 shows lower vehicle and person trip generation indicating that the site’s proximity to another small shopping centre, greater than 2,000m square GLFA (Site 16), is a potential influencing factor; and
- Site 20 is noted to have the highest trip generation in relation to its gross leasable area.

### 4.3.2 Centres greater than 2,000m square GLFA

In Section 4.2, the summary data for each site with greater than 2,000m square GLFA was presented, including site peak hour traffic generation per 100m square GLFA for individual development peak times. Figure 4.19, Figure 4.20, Figure 4.21 and Figure 4.22 compare the traffic generation across each site, including an average for comparison, for the Wednesday/Thursday, Friday, Saturday and Sunday peak periods respectively.

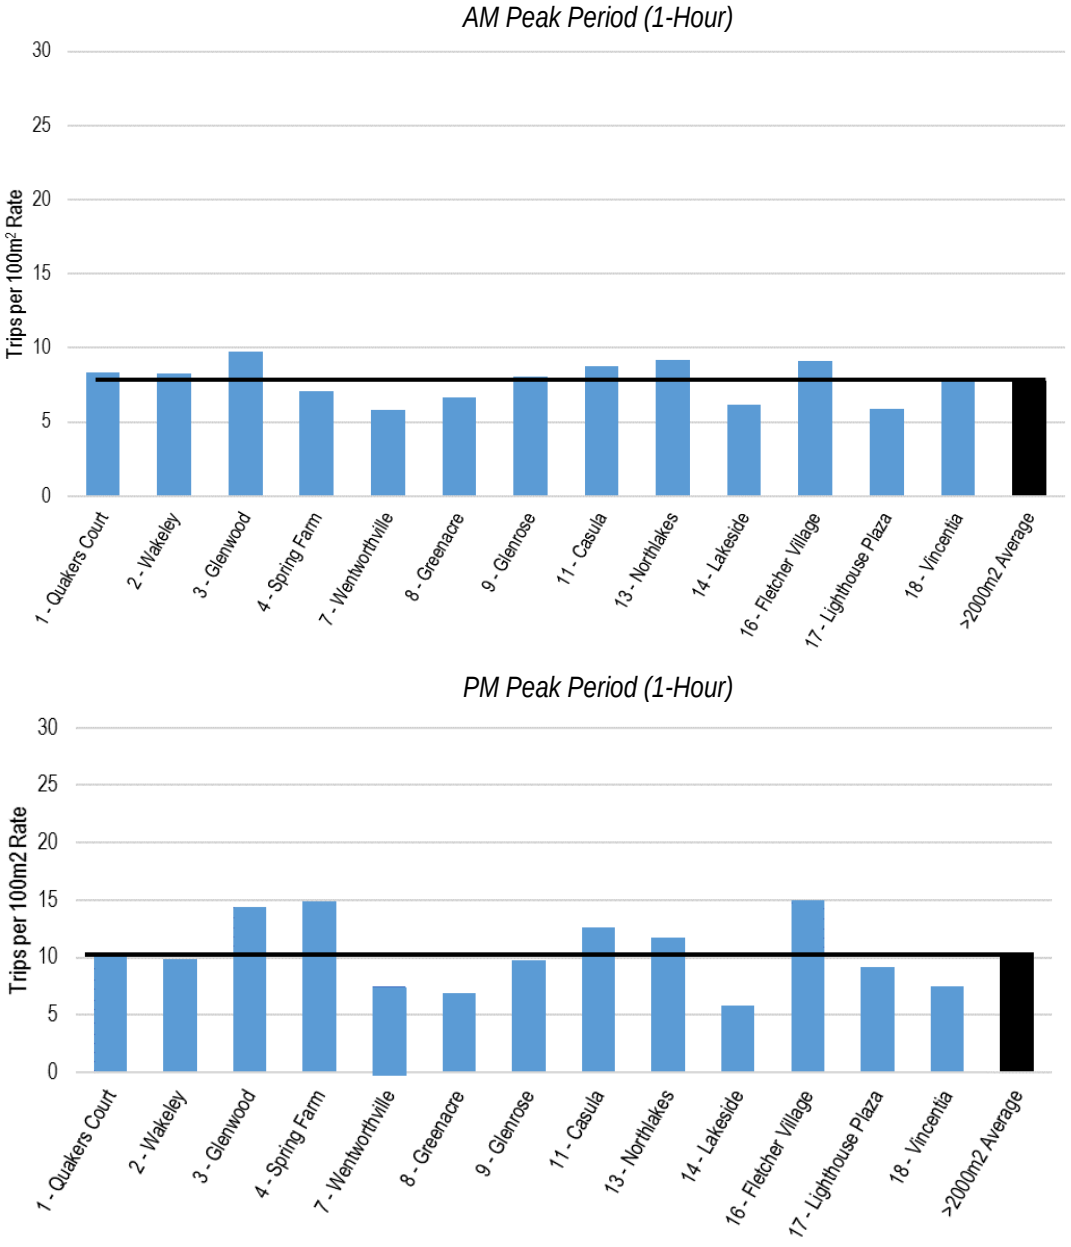

Figure 4.19: Wednesday/Thursday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - >2,000m square

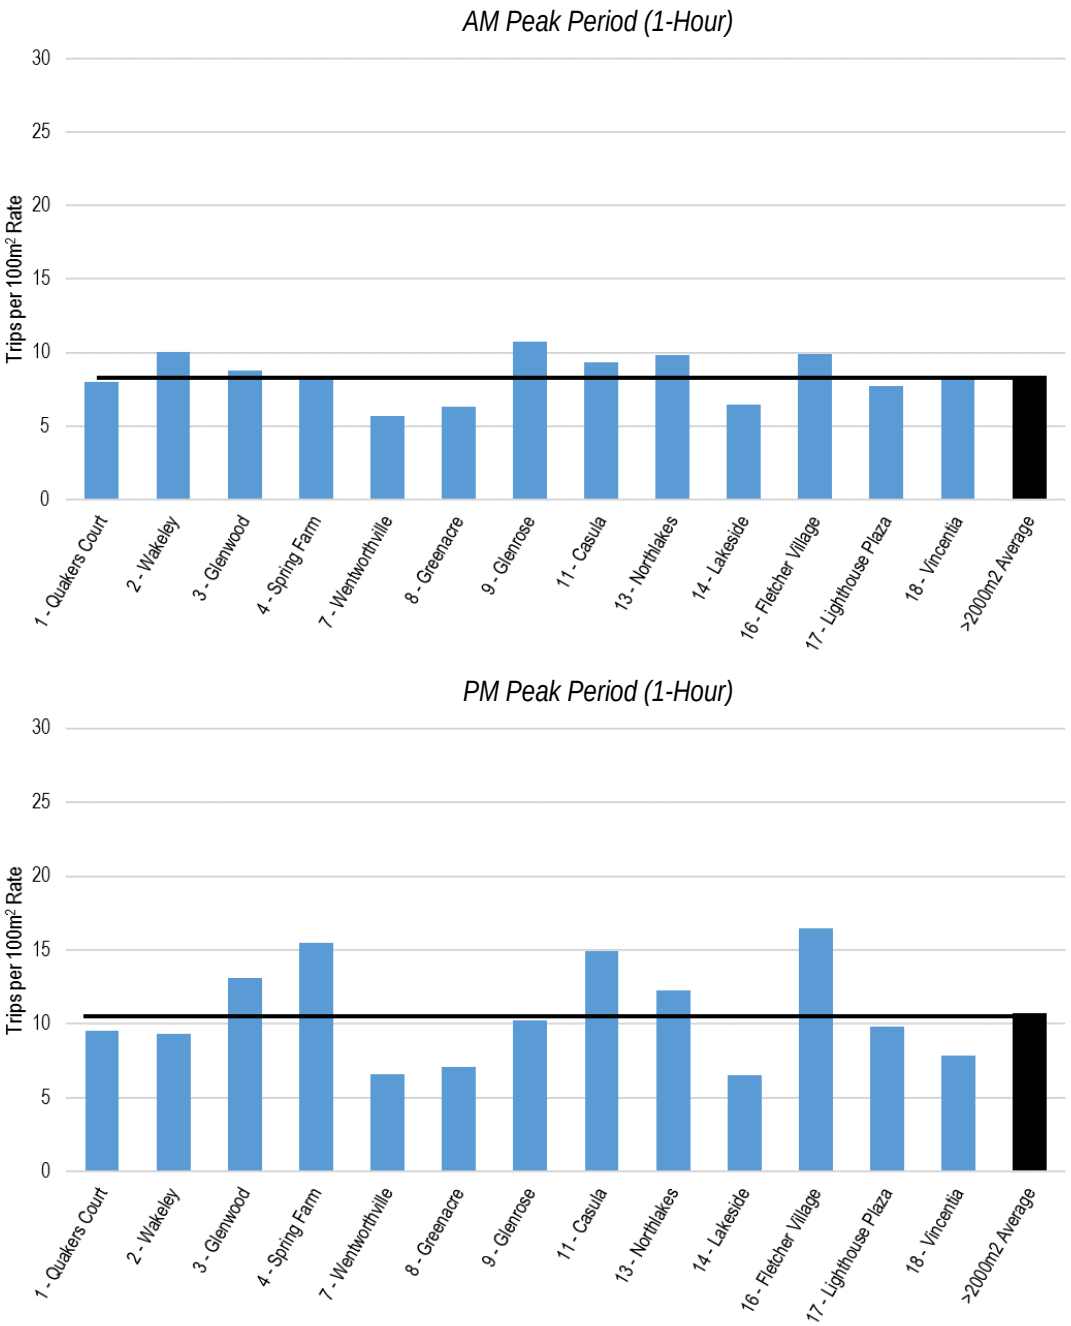

Figure 4.20: Friday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - >2,000m square

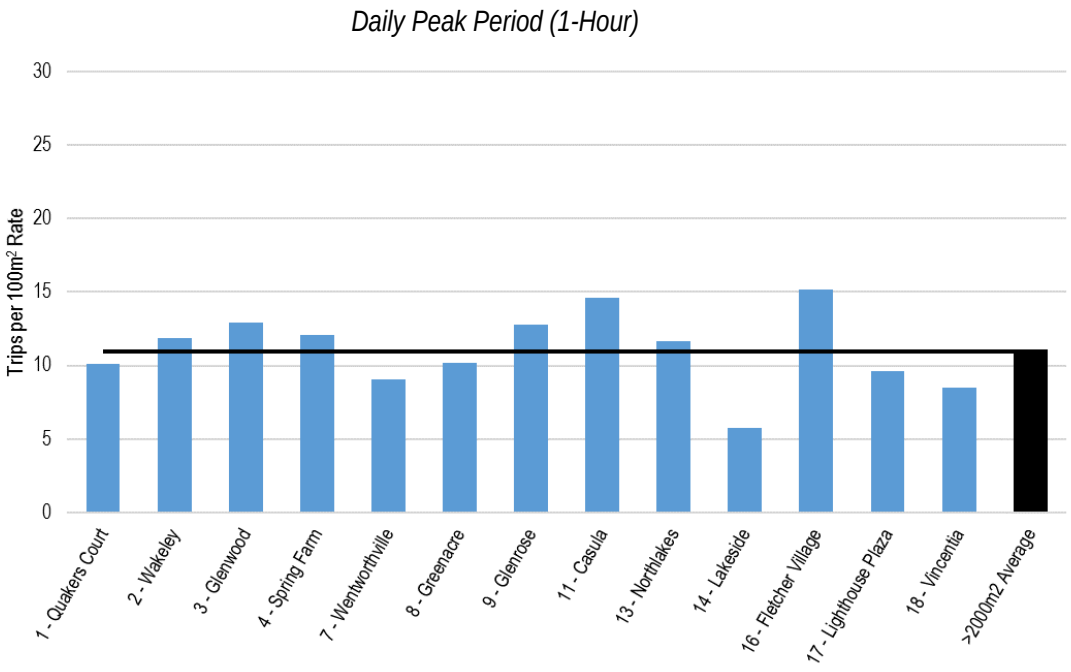

Figure 4.21: Saturday Vehicle Trip Rate (per 100m square GLFA) Peak Period - >2,000m square

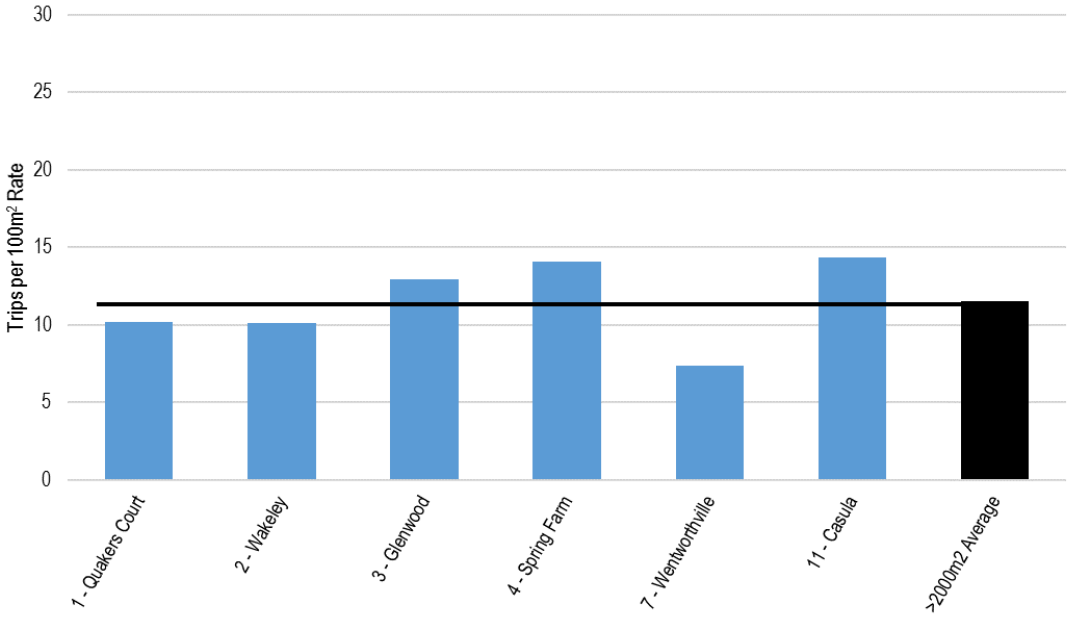

Figure 4.22: Sunday Vehicle Trip Rate (per 100m square GLFA) Peak Period - >2,000m square

Initial examination of the above shows that:

- sites show highest vehicle trip generation during PM and weekend peak periods, with AM peak times showing consistently trip rates;
- for a number of the larger sites the PM peak shows the greatest number of trips per 100m square GLFA across all survey days;
- sites show a consistent trip rate during AM peak periods and a more variable rate between the sites for the PM and weekend peak periods; and
- Site 16 is noted to have the highest trip generation despite is close proximity to another small shopping centre (Site 15 – ALDI Fletcher).

### 4.3.3 All Sites

Figure 4.23, Figure 4.24, Figure 4.25 and Figure 4.26 compare the traffic generation across all survey sites, including an average for comparison, for the Wednesday/Thursday, Friday, Saturday and Sunday peak periods respectively.

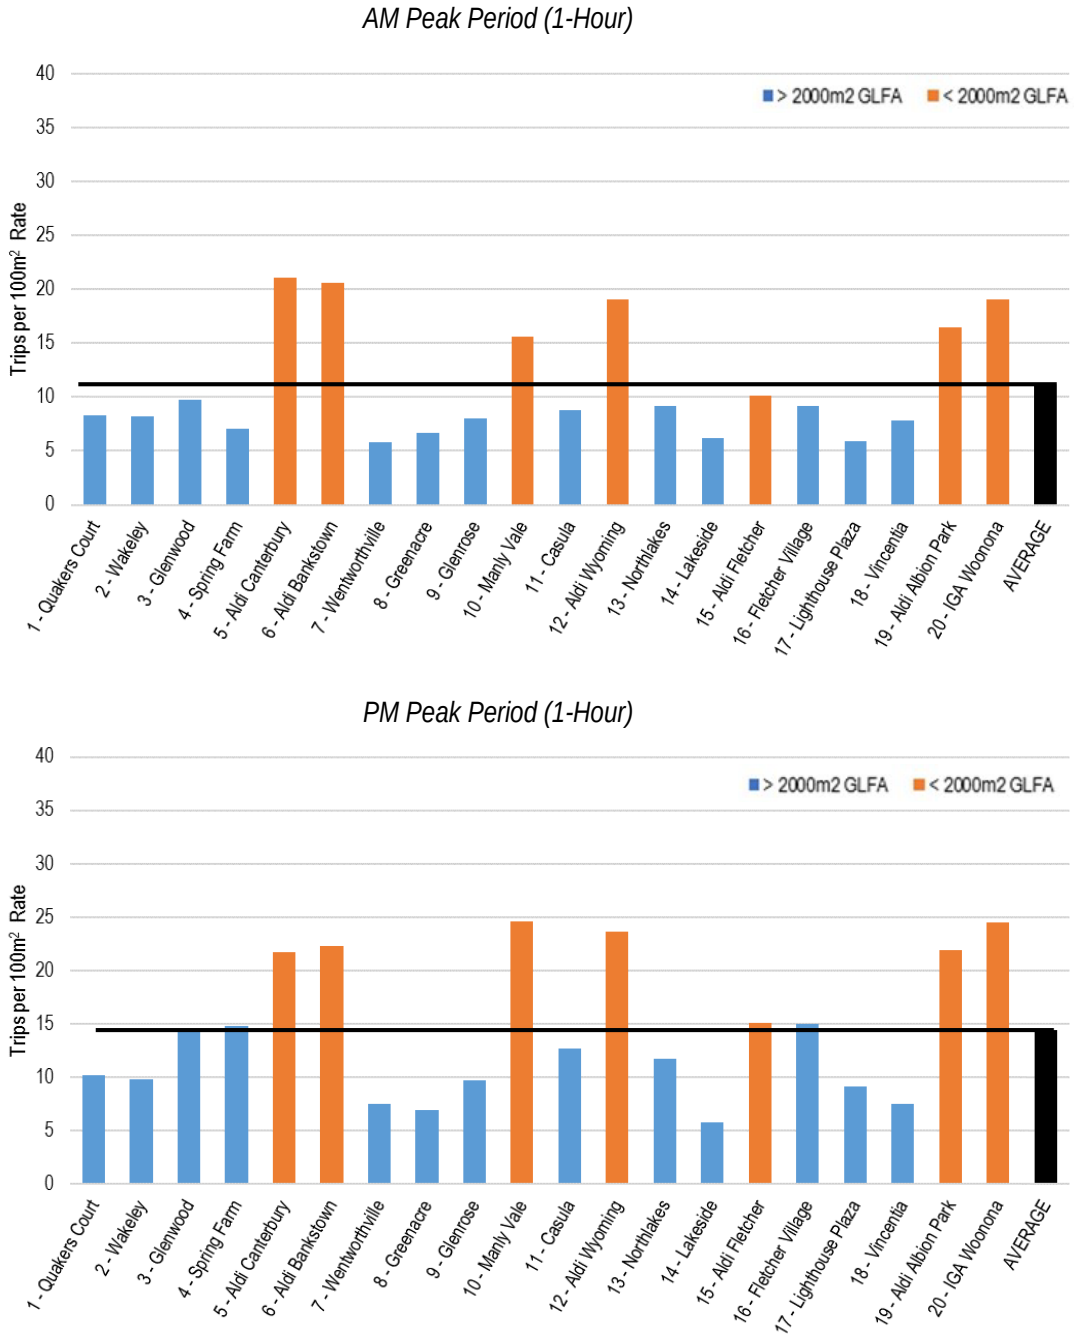

Figure 4.23: Wednesday/Thursday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - All Sites

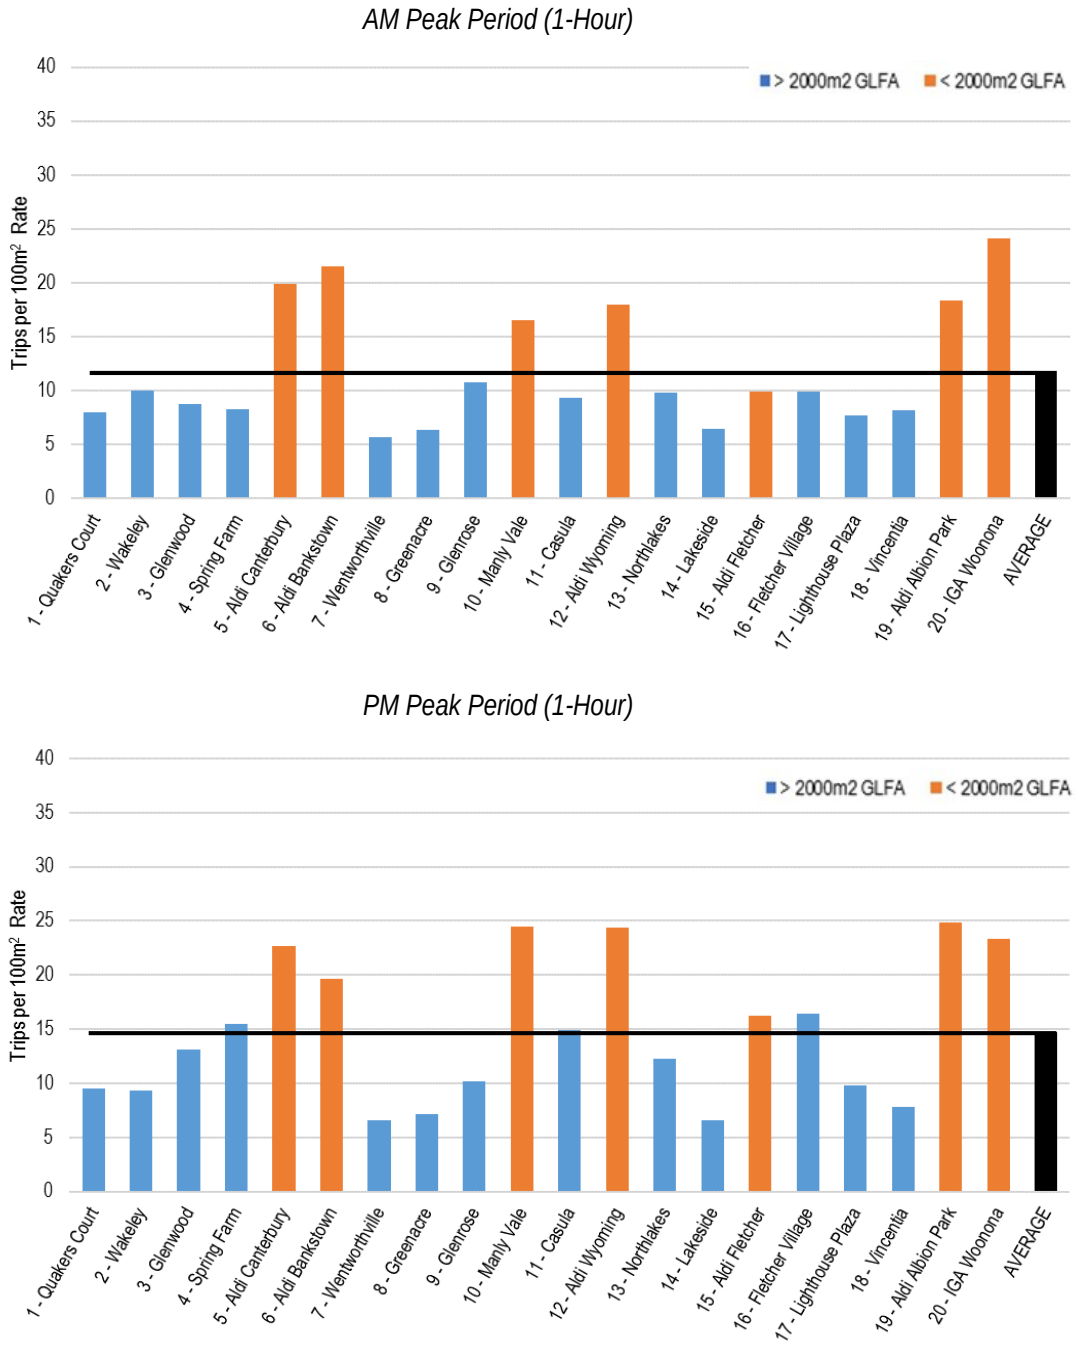

Figure 4.24: Friday Vehicle Trip Rate (per 100m square GLFA) AM and PM Peak Period - All Sites

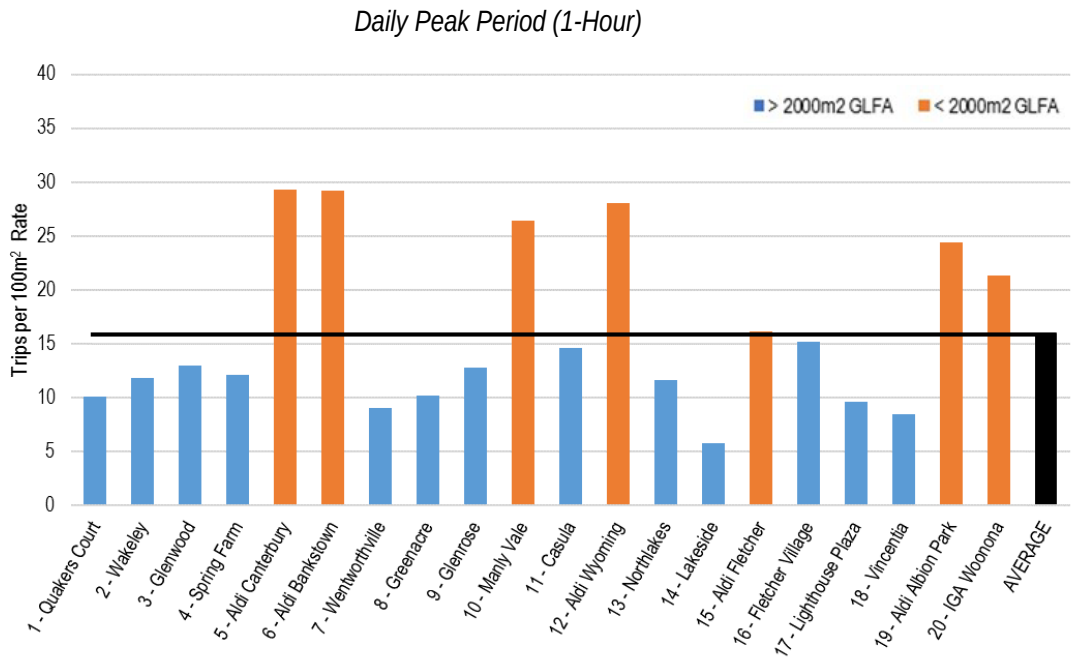

Figure 4.25: Saturday Vehicle Trip Rate (per 100m square GLFA) Peak Period - All Sites

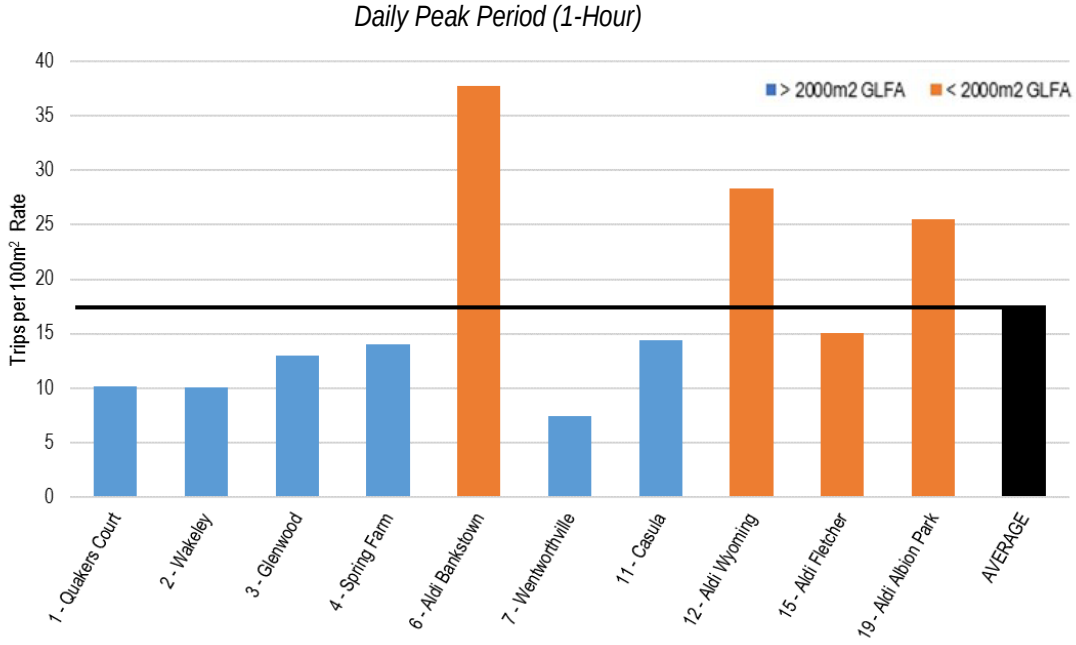

Figure 4.26: Sunday Vehicle Trip Rate (per 100m square GLFA) Peak Period - All Sites

Initial examination of the above shows that:

- all sites show highest vehicle trip generation during PM and weekend peak periods, with AM peak times showing consistent trip rates; and
- for a number of the larger sites the PM peak shows the greatest number of trips per 100m square GLFA across all survey days, while for the smaller sites the weekend peak period trip rate is highest; and
- smaller sites shown in orange are noted to typically have the highest trip generations with the exception of Sites 15 and 16. This is likely due to their close proximity to one another in Fletcher, Newcastle.

## 4.4 ADDITIONAL SURVEY DATA

### 4.4.1 Customer Survey Responses

The number of responses to customer surveys for each site is outlined in Table 4.10. Further detailed analysis of customer survey responses is provided within the Analysis Report.

** A number of customer surveys were not undertaken at a number of sites due to factors such as an on-site manager withdrawing commission, or the survey not being undertaken on that day (i.e. Site 16 has no Sunday survey).*

### 4.4.2 Linked Trips

The percentage of 'linked trips' where a customer was visiting another location as part of the trip to the shopping centre was surveyed for each site as part of the manual questionnaire. Average trip percentages for Wednesday/Thursday, Friday, Saturday and Sunday are shown in Figure 4.27, Figure 4.28, Figure 4.29 and Figure 4.30 respectively. Note that sites that do not have any surveys performed on the day have been removed from the graph.

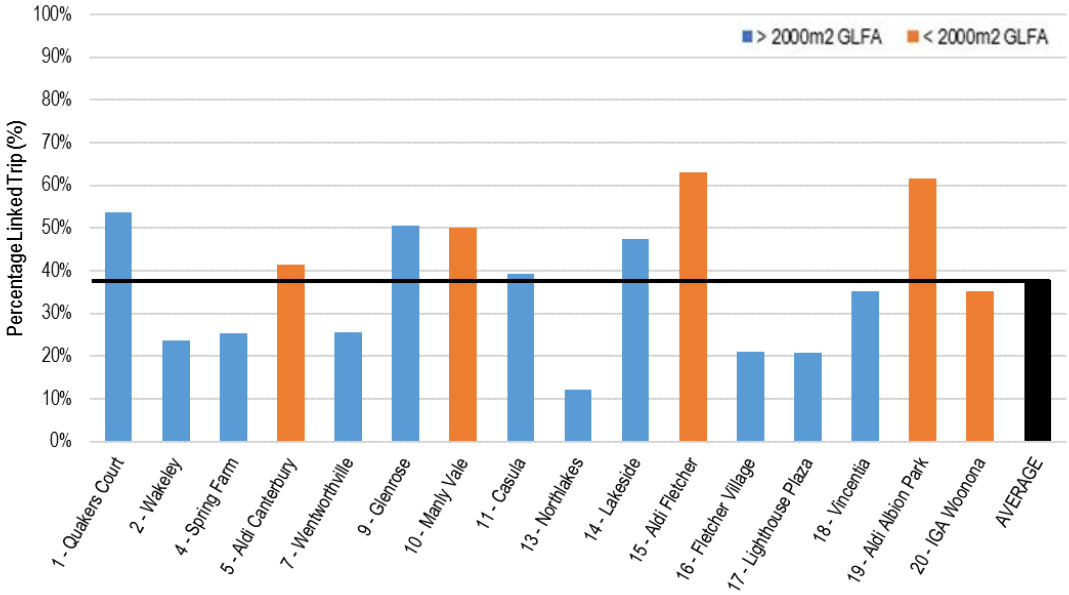

Figure 4.28: Friday Daily Linked Trips – All Sites

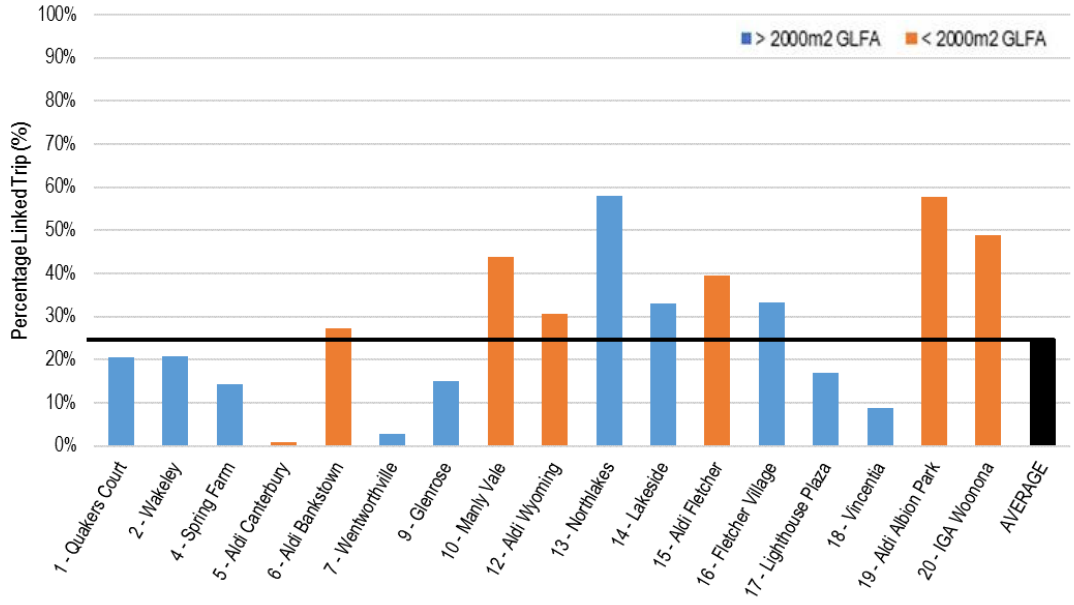

Figure 4.29: Saturday Daily Linked Trips – All Sites

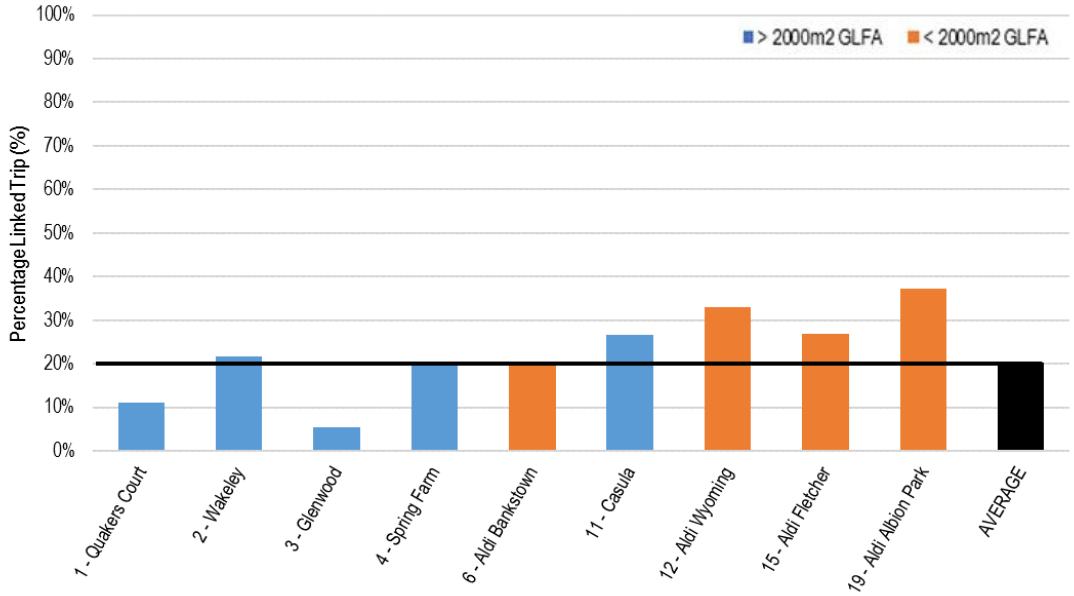

Figure 4.30: Sunday Daily Linked Trips – All Sites

### 4.4.3 Parking Accumulation Data

Average parking accumulation for each survey day at sites less than 2,000m square GLFA and greater than 2,000m square GLFA are shown in Figure 4.31 and Figure 4.32 respectively. As outlined in Table 3.5, a number of survey sites included errors in tube count data impacting parking accumulation calculations. Impacted sites and times have been excluded from the below average accumulation and the dataset utilised is considered appropriate to provide information on parking trends at shopping centres.

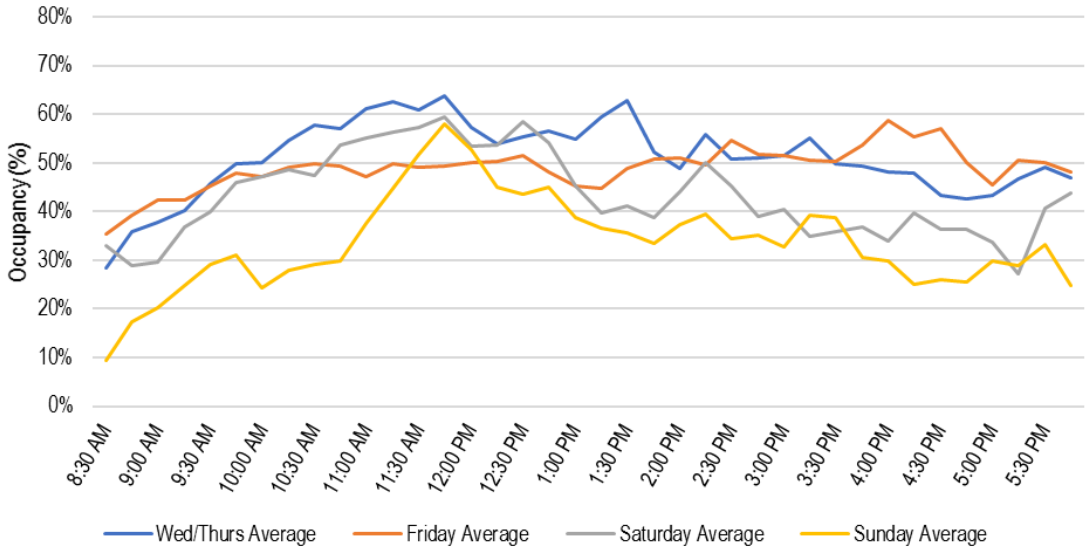

Figure 4.31: Average Parking Accumulation (%) – Sites <2,000m square GLFA

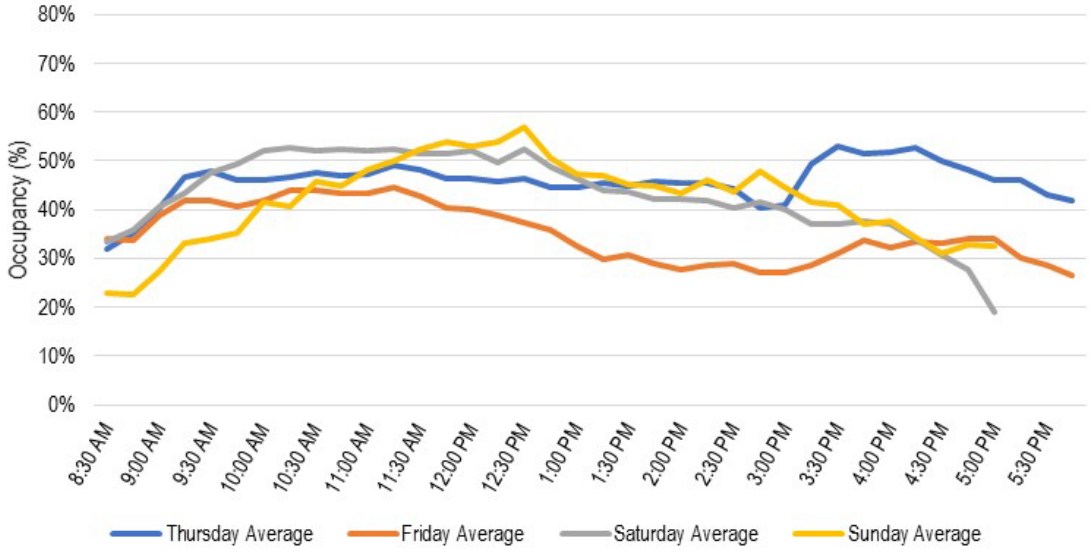

Figure 4.32: Average Parking Accumulation (%) – Sites >2,000m square GLFA

Further parking analysis will be undertaken within the subsequent Data Analysis report.

## 4.5 TRIP SPLIT DATA (IN/OUT TRIP GENERATION)

Average Inbound and Outbound (IN/OUT) trip movements for each survey day at sites less than 2,000m square GLFA are shown in Figure 4.33 to Figure 4.36. It is noted that in Table 3.5 a number of survey sites included errors in tube count data impacting trip movement calculations. Impacted sites and times have been excluded from the below averages to avoid data 'skewing.' The dataset utilised is considered appropriate to provide information on IN/OUT trip movement trends at shopping centres.

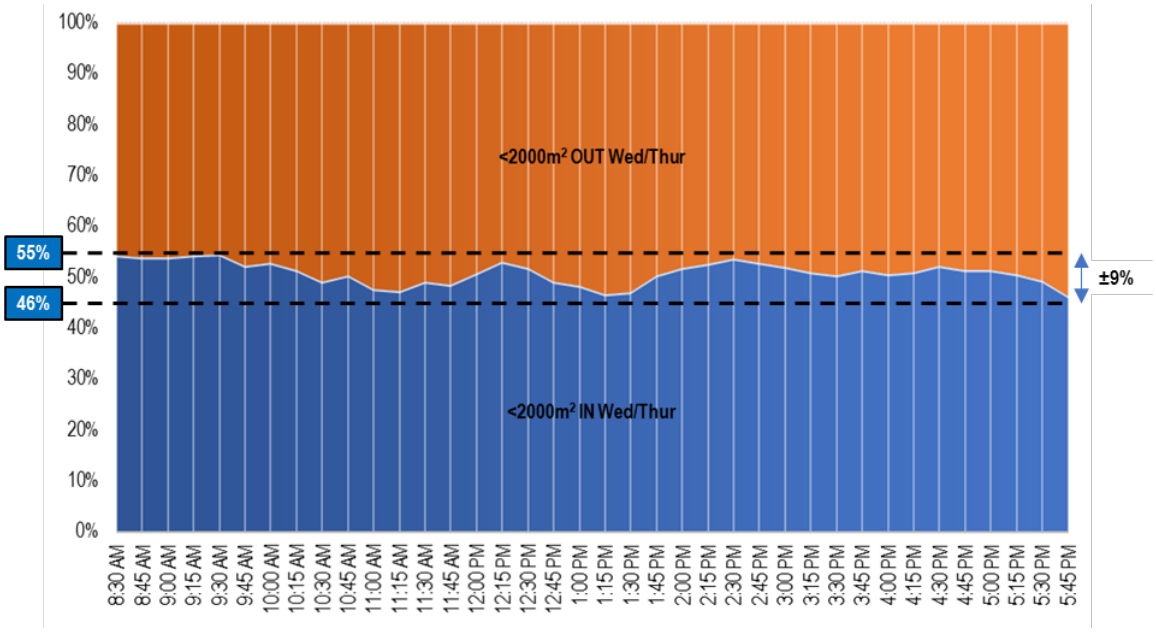

Figure 4.33: Average IN/OUT Trip Splits - Wednesday/Thursday - Sites <2,000m square GLFA

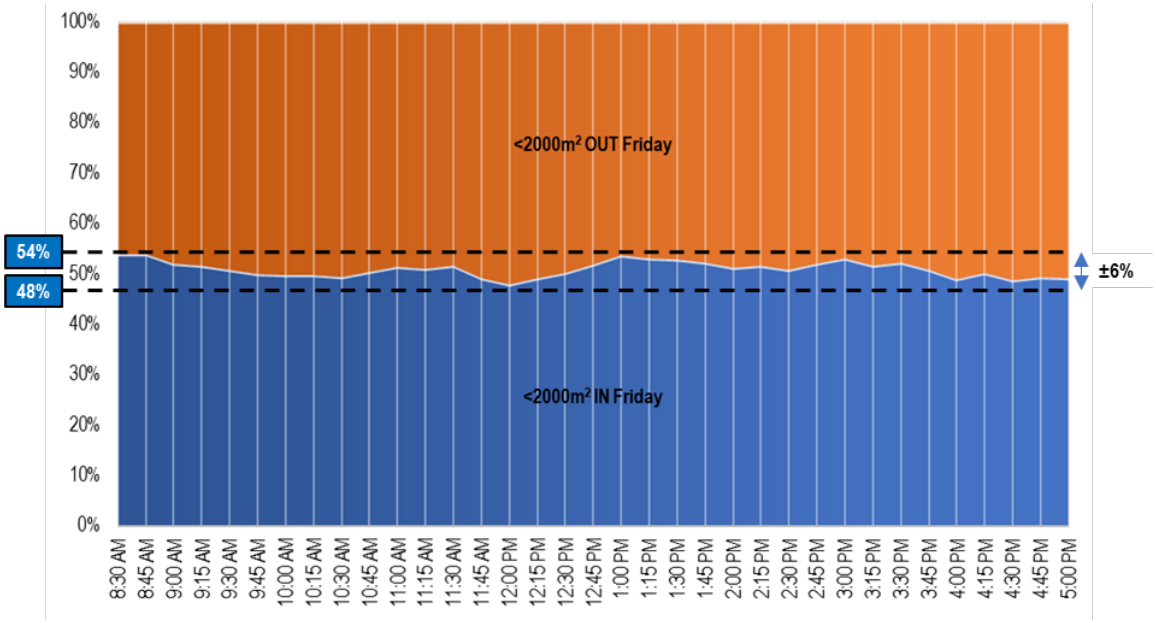

Figure 4.34: Average IN/OUT Trip Splits - Friday - Sites <2,000m square GLFA

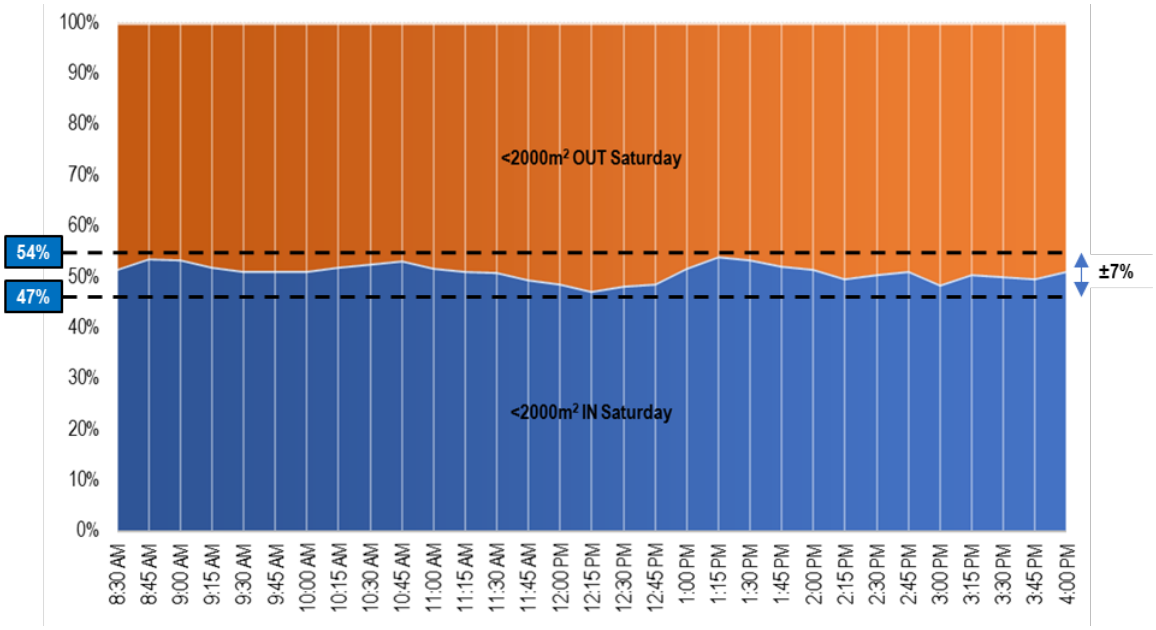

Figure 4.35: Average IN/OUT Trip Splits - Saturday - Sites <2,000m square GLFA

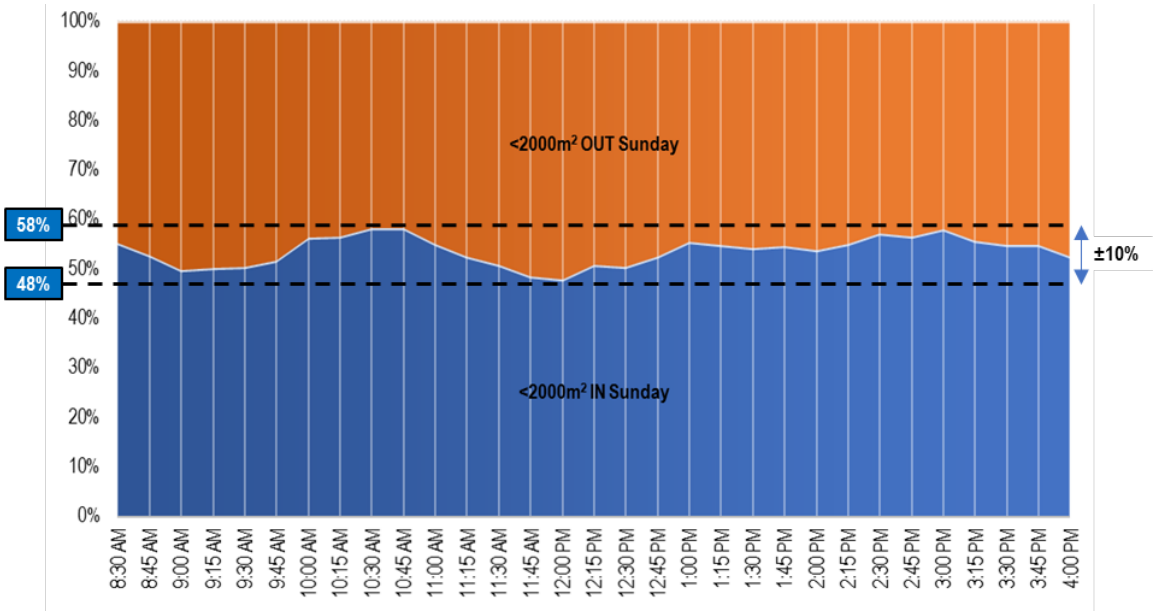

Figure 4.36: Average IN/OUT Trip Splits - Sunday - Sites <2,000m square GLFA

The IN/OUT trip splits for sites with less than 2,000m square GLFA show some variability across all survey days, however all remain relatively consistent with expected trends of vehicles entering and leaving the site within a 1-hour time frame (i.e. a 50/50 split). No significant peak period trends are apparent. It is noted that Sunday splits provide greater variability, however this is likely due to the limited number of surveys completed on a Sunday. The maximum variance of IN/OUT trips for sites (excluding Sunday) with less than 2,000m square GLFA is 9%.

Average Inbound and Outbound (IN/OUT) trip movements for each survey day at sites greater than 2,000m square GLFA are shown in Figure 4.37 to Figure 4.40.

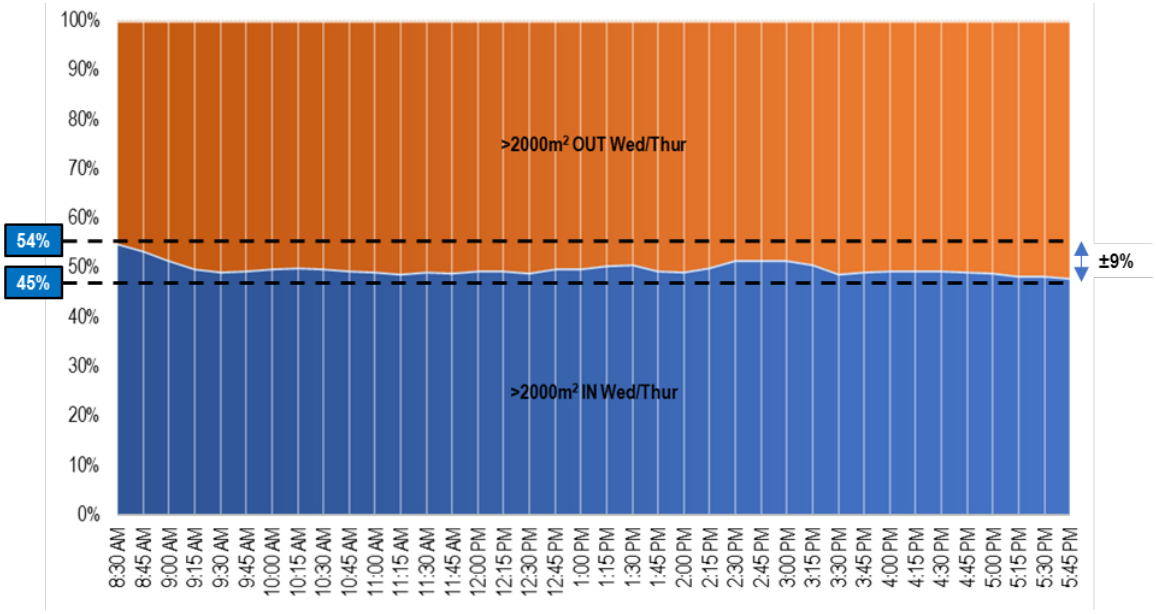

Figure 4.37: Average IN/OUT Trip Splits – Wednesday/Thursday - Sites >2,000m square GLFA

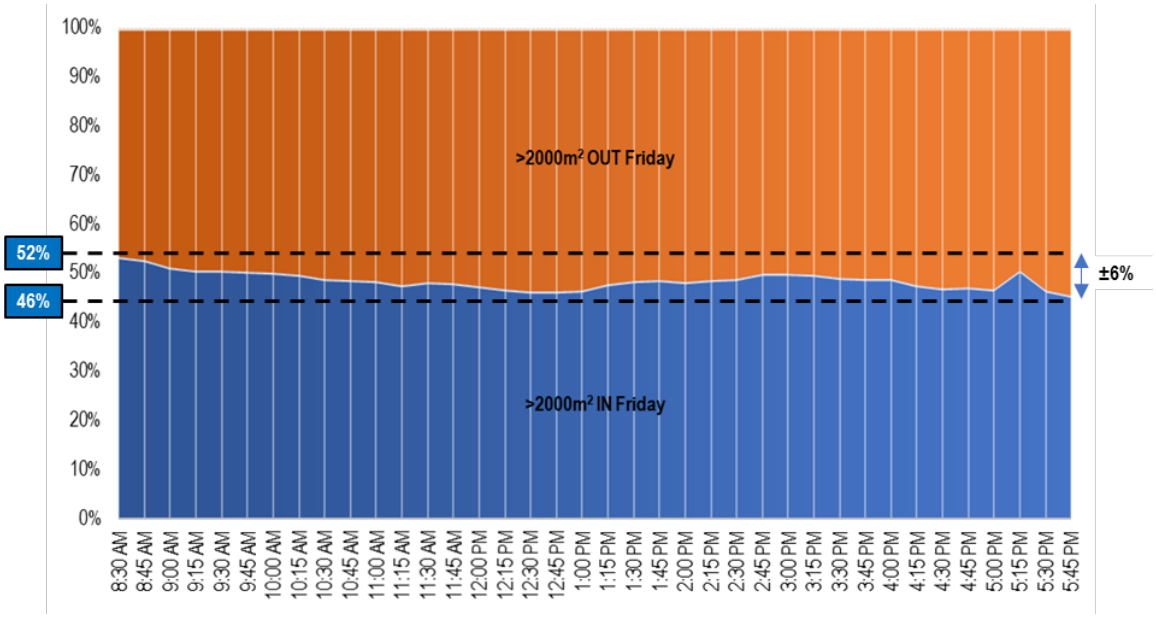

Figure 4.38: Average IN/OUT Trip Splits – Friday - Sites >2,000m square GLFA

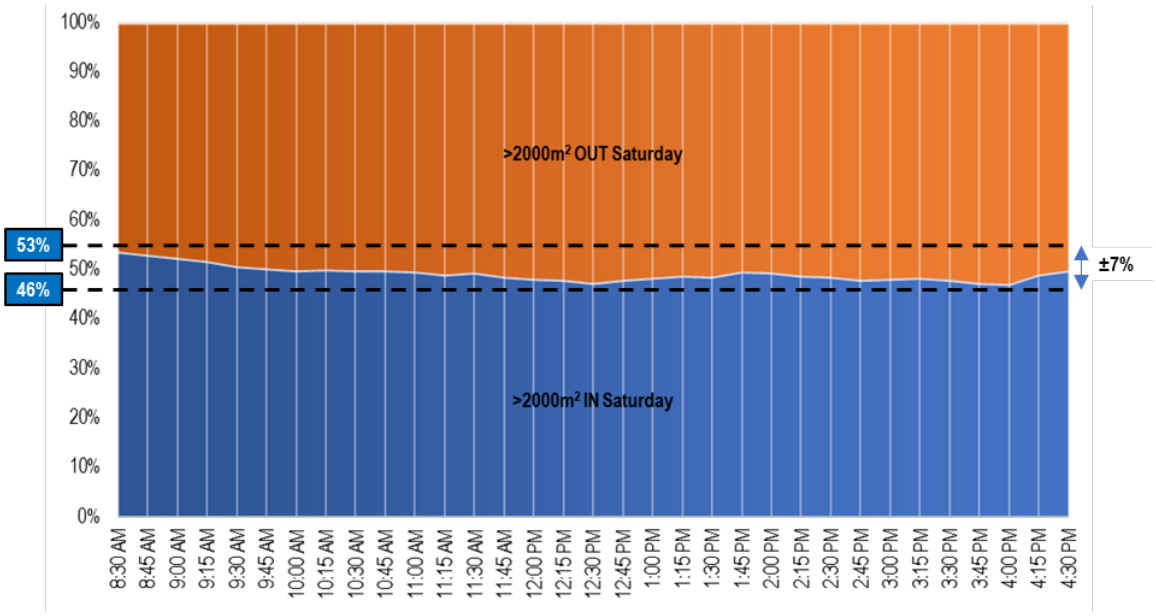

Figure 4.39: Average IN/OUT Trip Splits – Saturday - Sites >2,000m square GLFA

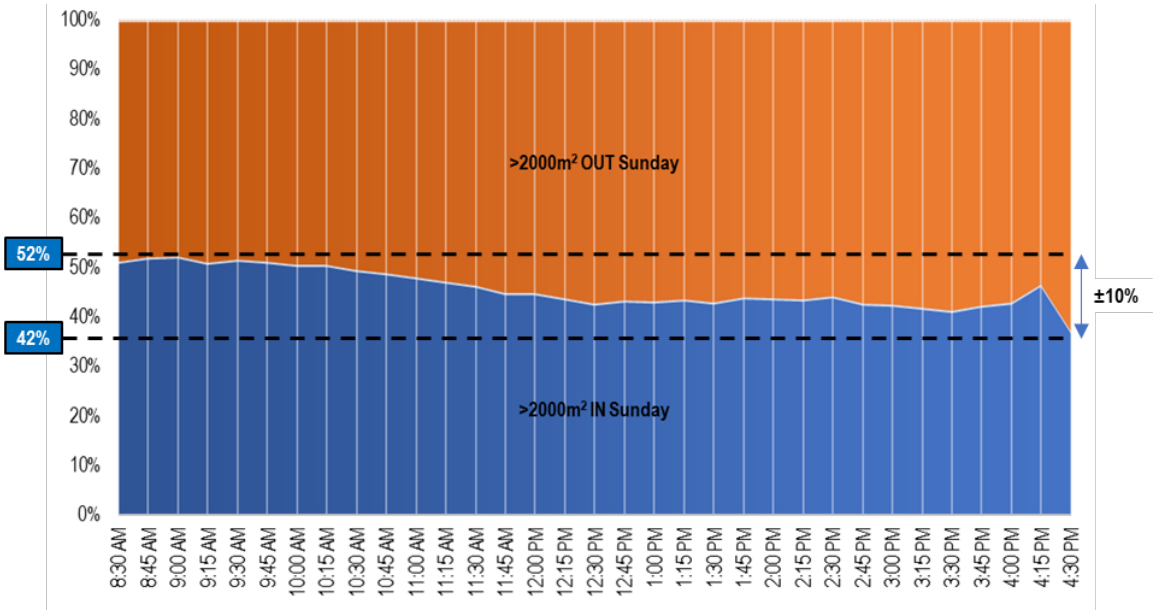

Figure 4.40: Average IN/OUT Trip Splits – Sunday - Sites >2,000m square GLFA

The IN/OUT trip splits for sites with greater than 2,000m square GLFA show some variability across all survey days however all remain relatively consistent with expected trends of vehicle entering and leaving the site within a 1-hour time frame (i.e. a 50/50 split). No significant peak period trends are apparent other than Friday at approximately 5pm, where inbound traffic shows a peak increase over outbound. It is noted that Sunday splits show a dissimilar profile to other days, this is likely due to the limited number of surveys completed on a Sunday and some data anomalies.

The maximum variance of IN/OUT trips for sites (excluding Sunday) with less than 2,000m square GLFA is 9%.

# 5. CONCLUSIONS

20 sites consisting of 7 sites less than 2,000m square GLFA and 13 sites greater than 2,000m square GLFA were surveyed, of which 10 had surveys completed on a Sunday and 3 on a Wednesday (ALDI only). Sites were surveyed in Sydney (11 sites), Central Coast NSW (3 sites), Newcastle (2 sites), Wollongong (2 sites) and Regional NSW (2 sites) to capture the potential differences that might arise in trip generation. Manual surveys at each site were supplemented with automated vehicle trip surveys and included survey questionnaires to determine typical customer modal choices and an on-site parking occupancy count.

For each site, network peak hours, site peak hours, site peak trips, peak period trips per 100m square GLFA, peak period trips per parking space, peak period trips per staff and pedestrian trips were tabulated. Average hourly vehicle movements and parking accumulation were also provided. Sites have been grouped according to centre size for analysis into less than and greater than 2,000m square GLFA based on trip generation results. Wednesday/Thursday, Friday, Saturday and Sunday peak periods were graphed for each group for comparative analysis.

The preliminary data analysis indicates that average development sites had weekday peak periods at least 1 hour outside frontage road peak periods, though this was less common in sites greater than 2,000m square GLFA. Average peak times were typically later in the AM and PM for all sites and the highest peak periods were consistently during the Thursday PM or Saturday peak times. Pedestrian trips did not appear to correlate with vehicle trip numbers for smaller sites however a correlation was apparent for the larger centres.

In comparing traffic generation rates of sites less than 2,000m square GLFA and greater than 2,000m square GLFA, the average traffic generation per 100m square GLFA rate was much lower for the larger sites following existing shopping centre trends. Trip generation rates were much more variable for the smaller sites. Trip generation rates on Saturdays and Sundays were consistent across all sites.

In comparing weekend with weekday, weekend peaks typically occurred at lunchtime between 11.00am and 2.00pm and had the highest site trip generation for sites less than 2,000m square GLFA while the highest trip generation for sites greater than 2,000m square GLFA occurred during both the Thursday PM (typically between 3.00pm and 6.00pm) and weekend peaks.

The split of trips ‘in to’ and ‘out of’ (IN/OUT split) was observed to be consistent with a 50/50 split where, on average, customers enter and exit the store within an hour. Some variation to this was observed on Sundays, though throughout the day splits remained relatively consistent with weekday and Saturday splits.

Parking occupancy, linked-trips and transport mode split data was also recorded for all surveyed sites. Further analysis on each will be undertaken in the subsequent Data Analysis Report.

Overall, the data collected, and preliminary analysis has built a platform for detailed analysis to provide a recommendation for trip generation at suburban shopping centre developments (less than 10,000m square GLFA), which will be contained in the subsequent Data Analysis Report.
