

Sydney Terminal Area Reconfiguration – Central Station

Rail Service Improvement Program

September and October 2025

Transport for NSW acknowledges the Gadigal people of the Eora Nation as the Traditional Custodians of the lands on which we work and pay s respect to Elders past and present .

The Rail Service Improvement Program enables a safer, more equitable, and integrated transport network where people can move safely, reliably and efficiently across NSW.

What work are we doing?

In September and October 2025, we will be undertaking the following activities:

- signalling works on track and in signalling locations
- ballast maintenance
- delivery and removal of equipment and materials.

When and where we'll be working

Work will take place inside our site compounds and the rail corridor as shown in the map overleaf.

Standard construction hours are **7am to 6pm, Monday to Friday and 8am to 1pm, Saturday.**

Out of hours work and deliveries

Some work and deliveries are required to take place outside of standard construction hours between:

- **6pm Friday 5 September 2025 and 7am Monday 8 September 2025**
- **6pm Friday 10 October 2025 and 7am Monday 13 October 2025.**

In addition, some minor midweek work and deliveries will take place outside of standard construction hours. This work has been assessed

and will be continually monitored, however is not expected to be noticeable.

Why we work outside of standard construction hours

We schedule work outside of standard construction hours to take place during Sydney Trains trackwork periods when no trains are running, minimising disruptions to commuter services and improving the safety of our construction team and customers.

What will this mean for you?

You may notice:

- workers and construction vehicles
- lighting from temporary lighting towers
- noise from machinery and equipment.

Managing our impacts

Work will not be continuous. We understand construction activities may cause disruption to our closest neighbours, and every effort will be made to minimise the impacts where possible, including:

- turning off equipment when not in use and using non-tonal reversing alarms to reduce potential noise impacts
- locating equipment as far away from residents and businesses as possible
- directing lighting away from residents
- conducting on-site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration and dust management.
