

Sydney Terminal Area Reconfiguration - Central Station

Rail Service Improvement Program

February 2025

Transport for NSW acknowledges the Gadigal people of the Eora Nation as the Traditional Custodians of the lands on which we work and pays respect to Elders past and present.

The Rail Service Improvement Program, formerly known as More Trains, More Services, enables a safer, more equitable, and integrated transport network where people can move safely, reliably, and efficiently across NSW.

What work are we doing?

In February 2025, we will be undertaking the following work:

- track and fencing
- overhead wiring
- signal infrastructure removal
- yard demobilisation
- spoil removal
- equipment and material deliveries.

When and where we'll be working

Work will take place inside our site compounds and the rail corridor as shown in the map on the following page.

Standard construction hours are between **7am until 6pm Monday to Friday and 8am until 1pm on Saturdays**.

Out of hours work and deliveries

Some work and deliveries are required to take place outside of standard construction hours between:

- **6pm Friday 21 February and 7am Monday 24 February 2025.**

Some minor midweek work and deliveries will also take place outside of standard construction hours. This work has been assessed and will be continually monitored, however is not expected to be noticeable.

Why we work outside of standard construction hours

We schedule work outside of standard construction hours to take place during Sydney Trains trackwork periods when no trains are running, minimising disruptions to commuter services and improving the safety of our construction team and customers.

What will this mean for you?

You may notice:

- workers and construction vehicles
- lighting from temporary lighting towers
- noise from machinery and equipment.

Managing our impacts

We understand construction activities may cause disruption to our closest neighbours, and every effort will be made to minimise the impacts where possible, including:

- turning off equipment when not in use and using non-tonal reversing alarms to reduce potential noise impacts

- locating equipment as far away from residents and businesses as possible
- directing lighting away from residents
- conducting on-site monitoring to ensure compliance with strict environmental conditions relating to noise, vibration and dust management.
