VENM	Virgin excavated natural material
VOC	Volatile organic compounds
VOCC	Volatile organic chlorinated compounds

Executive Summary

Background and objectives

AECOM Australia Pty Ltd (AECOM) was engaged by Transport for New South Wales (TfNSW) to undertake a Targeted Detailed Site Investigation (DSI) in the footprint of the proposed Pacific Highway upgrade through Wyong town centre, hereafter referred to as the 'project area' as defined in **Figure 1.A** in **Appendix A**. The overarching objective of the Targeted DSI is to identify contamination risks and inform design and construction remediation and management options. The objectives of the Targeted DSI were to:

- identify the nature and extent of contaminants of potential concern (CoPCs) in environmental media at the areas of environmental concern (AEC)
- undertake an indicative waste classification and assess the potential to reuse soils in areas of cut
- identify if groundwater present beneath the site may be intersected during construction and the nature and extent of CoPCs in groundwater beneath and down-gradient of the AECs
- identify complete or potentially complete source-pathway-receptor (SPR) linkages exist for CoPC
- decide if contamination requires remediation for the site to be considered suitable for the proposed land use.

Scope of works

The scope of works completed for the contamination investigation comprised:

- logging and collection of soil samples from 52 boreholes, 18 test pits, five hand augers and two pavement cores
- installation and development of 15 new groundwater monitoring wells
- sampling of 15 new and two exiting groundwater monitoring wells
- installation, leak testing and sampling of four soil vapour monitoring wells
- collection of 23 coal tar samples from asphalt cores
- laboratory analysis of selected soil, ground water and soil vapour samples for CoPC
- surveying of completed borehole and monitoring wells.

Findings and conclusions

Based on the review of previous investigation data and new soil data obtained during this investigation, soil impacts have found to be limited in extent to three shallow soil sample locations. There was one hotspot of lead (Pb) in the rail corridor and two locations where carcinogenic polycyclic aromatic hydrocarbons (PAHs) exceeded the adopted human health based assessment criteria in the Pacific Highway between Anzac Avenue and North Road.

Asbestos containing material (ACM) was not observed the soil subsurface in test pits or boreholes and was not detected in soil samples analysed. There were isolated fragments of ACM observed on the ground surface, with one near the intersection of south Tacoma Road and the Pacific Highway and within the rail corridor. Based on the presence of underground service conduits and service pits made of ACM within the project area and some areas of fill with inclusions of demolition wastes, it is likely asbestos in soil would be encountered during future excavation works in parts of the project area.

Groundwater was encountered at depths ranging between 0.3 metres below ground level (mbgl) and 10 mbgl. No sheen or non-aqueous phase liquids (NAPL) were observed in the groundwater wells sampled. All groundwater and soil vapour results were less than the adopted human health based assessment criteria. Groundwater results exceeded the adopted ecological screening criteria for heavy metals (cadmium, chromium, copper, nickel and zinc) across the project area and perfluorooctanesulfonic acid (PFOS) in the wells closest to the fire station. Groundwater extracted during dewatering activities during construction would require testing and assessment against discharge criteria or be disposed of at an appropriately liquid waste facility.

The conceptual site model (CSM) has been revised based on the results of investigation. All AECs are considered low risk with the exception of the following:

- AEC 1, AEC 11 and AEC23: Operational service stations (low to moderate risk) due to ongoing use (potential for future spills/leaks)
- AEC 17: unregulated fill adjacent to the Pacific Highway and rail corridor which is moderate risk
- AEC 25: coal tar pavements (low to moderate risk) due to potential presence
- AEC 20a to g and 26: ACM pipes (moderate risk).

Localised soil remediation or management would be required during construction at the lead hotspot within the rail corridor and area impacted with carcinogenic PAHs at the Pacific Highway just south of North Road intersection.

Where the impacted soils are to be excavated as part of bulk excavation and disposed off-site to an appropriately licensed waste facility, a remediation action plan (RAP) would not be required. Where the impacted soils are not proposed to be excavated within the construction footprint or re-use of soils is proposed, a RAP and validation report would be required to demonstrate unsuitable soils have been delineated and removed. An asbestos management plan (AMP) would be required to manage removal of asbestos conduits and pits as well as areas where asbestos impacted fill or surface soils are encountered. An unexpected finds protocol (UFP) should also be prepared for construction to manage potential previously unidentified contamination encountered during construction.

Based on the comparison of the soil results to the excavated natural material order 2014 (ENM order), fill and natural shallow soils within the project area would not meet the ENM order requirements based on the results. Comparison of the results to the NSW EPA (2014) *Waste Classification Guidelines – Part 1 Classifying Waste*, identified areas of restricted solid waste (RSW) and hazardous waste (HW) at several locations across the project area. Further sampling and analysis including toxicity characteristic leaching procedure (TCLP) analysis may change the classification. Areas of acid sulfate soils, located mainly within and south of the Wyong River would be classified as potential acid sulfate soils and require disposal in accordance with NSW EPA (2014) *Waste Classification Guidelines – Part 4* Acid Sulfate Soils and treatment and management in accordance with the Acid Sulfate Soil Management Plan (ASSMP) (AECOM, 2024b).

1.0 Introduction

1.1 Background

AECOM Australia Pty Ltd (AECOM) was engaged by Transport for New South Wales (TfNSW) to undertake a Targeted Detailed Site Investigation (DSI) in the footprint of the proposed Pacific Highway upgrade through Wyong town centre. TfNSW propose to upgrade a section of the Pacific Highway that passes through the town centre of Wyong, NSW. The Central Coast's population is forecast to grow by 75,000 people over the next two decades – with the majority of this growth to occur in and around its civic and cultural heart: Wyong. The Pacific Highway Upgrade project and the associated car park and town centre developments are critical to Wyong's ability to meet this challenge.

Key features of the project include:

- upgrade of a 2.4km stretch of the Pacific Highway between Johnson Road and Cutler Drive intersections
- improving traffic flow and safety
- improving access to public transport and encourage active transport
- maintaining the town identity and cater for future public transport projects.

The location of the proposed upgrade includes:

- northern section – road upgrade works area north of the Wyong River. Pacific Highway from Wyong River and extends to approximately 290 m north of the intersection with Cutler Drive. This section includes portions of North Road, Anzac Ave, Rose Street, Howarth Street, River Road and Panonia Road.
- southern section – road upgrade works area south of the Wyong River. Pacific Highway commencing at intersection with Johnson Road and extending to the Wyong River. This section includes portions of McPherson Road and S Tacoma Road.

A REF was prepared for the Pacific Highway upgrade through Wyong town centre in 2015 (referred to in this addendum REF as the 'Project REF') (Roads and Maritime, 2015). The Project REF was placed on public display between 27 October 2015 and 27 November 2015 for community and stakeholder comment. A submissions report dated February 2016 was prepared to respond to issues raised (Roads & Maritime, 2016).

Following further design development in 2017, an addendum REF for the Pacific Highway upgrade through Wyong town centre was prepared (the '2017 addendum REF') (Roads & Maritime, 2017). AECOM is now undertaking design changes to the 100% Concept Design (proposed modification) and an addendum REF.

The project area boundary is defined on **Figure F1.A** in **Appendix A** and described in **Section 2.0**.

1.2 Objectives

The overarching objective of the Targeted DSI is to identify contamination risks and inform design and construction remediation and management options. Specific objectives of the DSI as stated in the data quality objectives (DQOs) (see **Section 4.1**) are:

- identify the nature and extent of contaminants of potential concern (CoPCs) in environmental media at the areas of environmental concern (AEC)
- undertake an indicative waste classification and assess the potential to reuse soils in areas of cut
- identify if groundwater present beneath the site may be intersected during construction and the nature and extent of CoPCs in groundwater beneath and down-gradient of the AECs
- identify complete or potentially complete source-pathway-receptor (SPR) linkages exist for CoPC

- decide if contamination requires remediation for the site to be considered suitable for the proposed land use.

1.3 Scope of work

The following Sampling, Analysis and Quality Plans (SAQPs) were prepared for the investigation:

- AECOM (2023a) Sampling, Analysis and Quality Plan 1, Wyong Town Centre - Environmental Assessment
- AECOM (2023b) Sampling, Analysis and Quality Plan 2, Wyong Town Centre - Environmental Assessment - developed to specifically address potential soil vapour risks identified by SMEC (2015) from potential underground petroleum storage systems (UPSS) along the western portion of the between North Street and Anzac Avenue.

The investigation was undertaken in accordance with the SAQPs except where stated (see **Section 8.1**). The investigation was undertaken at the same time as geotechnical investigation. Some investigation locations were completed for both geotechnical and contamination investigations and some were contamination investigation only. The geotechnical investigation results are presented in a separate Geotechnical Factual Report (GFR) (AECOM, 2024).

The scope of works completed for the contamination investigation comprised the following:

- logging and collection of soil samples from:
  - 52 boreholes drilled to a maximum depth of 6 metres below ground surface (bgl)
  - 18 test pits excavated to a maximum depth of 3 bgl
  - 5 hand augers to a maximum depth of 1.5 bgl
  - 2 pavement cores
- installation and development of 15 new groundwater monitoring wells
- sampling of 15 new and two exiting groundwater monitoring wells
- installation, leak testing and sampling of 4 soil vapour monitoring wells
- collection of 23 coal tar samples from asphalt cores
- laboratory analysis of selected soil samples for CoPC:
  - heavy metals (arsenic, cadmium, chromium, copper, lead, nickel, zinc and mercury)
  - total recoverable hydrocarbons (TRH)/total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene, xylene and naphthalene (BTEXN)
  - polycyclic aromatic hydrocarbons (PAHs) and phenols
  - organochlorine pesticides (OCPs)
  - organophosphorus pesticides (OPPs)
  - polychlorinated biphenyl (PCBs)
  - per- and polyfluoroalkyl substances (PFAS)
  - volatile organic compounds (VOC)/ semi- VOC (SVOC)
  - chlorinated hydrocarbons (CHCs)
  - cyanide (total and weak-acid dissociable [WAD])
  - ammonia, nitrate, nitrite and nitrogen
  - physio-chemical parameters (pH, clay content, electrical conductivity, chloride, fluoride, sulfate and cation exchange capacity [CEC])
  - asbestos.

- laboratory analysis of 16 groundwater samples for TRH, BTEXN, PAH, phenols, pesticides, VOC/ SVOC, heavy metals and PFAS (note one well wasn't sampled due to being dry)
- laboratory analysis of soil vapour canisters from two soil vapour monitoring wells for TRH, BTEXN, PAH, CHCs, VOC/ SVOC and natural gases (oxygen, hydrogen, carbon monoxide and carbon dioxide) (two vapour wells could not be sampled due to water in the probes)
- surveying of completed borehole and monitoring wells.

The summary of sampling locations completed is provided in **Table T1** in **Appendix B**. Acid sulfate soil sampling was also undertaken as part of the site investigations. The results of the acid sulfate soil sampling are presented in the GFR (AECOM, 2024).

1.4 Relevant guidelines

The investigation works were conducted in general accordance with the following key documents:

- National Environmental Protection Council (NEPC) (2013) Amended Assessment Site Contamination (ASC) National Environmental Protection Measure (ASC NEPM), April 2013
- NSW EPA (2015) Guidelines on the Duty to Report Contamination under the Contaminated Land Management Act 1997
- NSW EPA (2020) Guidelines for the Site Auditor Scheme, 3rd Edition
- New South Wales Environment Protection Authority (NSW EPA) (2020) Consultants reporting on contaminated land: Contaminated Land Guidelines, May 2020
- NSW EPA (2022) Sampling Design Guidelines, August 2022
- NSW Department of Environment, Climate Change and Water (DECCW) (2010) Vapour Intrusion: Technical Practice Note, September 2010
- Department of Environment and Conservation (DEC) NSW (2007) Guidelines for the Assessment and Management of Groundwater Contamination, March 2007
- Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (CRC CARE) (2013) Technical Report No.23 – Petroleum Hydrocarbon Vapour Intrusion Assessment Australian Guidance, July 2013
- Heads of Environment Protection Authority (HEPA) (2020). PFAS National Environmental Management Plan 2.0, February 2020
- NHMRC (2008) Guidelines for Managing Risks in Recreational Water. Australian Government, National Health and Medical Research Council
- ANZG (2018) Australian and New Zealand Guidelines for Fresh and Marine Water Quality, August 2018.

2.0 Description of the proposed modification

2.1 Modification description

TfNSW proposes to modify the Pacific Highway upgrade through Wyong town centre to include design changes to the 100% Concept Design. The Project Review of Environmental Factors (REF) described the key features of the 100% Concept Design and assessed potential impacts associated with the construction and operation of the Project.

Key features of the proposed modifications include:

- a new signalised intersection at McPherson Road in place of a roundabout
- stop lines instead of a roundabout at the intersection of Panonia Road and River Road
- closing vehicle access from the Pacific Highway to Robleys Lane
- a new signalised T-intersection in place of the existing Rose Street roundabout and closing the Rose Street / Howarth Street intersection by making Rose Street a cul-de-sac. In addition, adjustments to bridge design and alignment are proposed
- a new single four-lane bridge structure over the Wyong River instead of the previously proposed twin bridges to accommodate both northbound and southbound traffic
- a replacement bridge on Rose Street over the rail line on an alignment slightly south of the existing bridge.

The modification also includes design adjustments and a staged approach for the construction of the commuter car park, with a first stage proposed in these works as an at-grade structure instead of multi-storey, with future compatibility as a multi-storey structure.

The design changes also encompass a dedicated off-road cycle path as well as footpaths on the eastern side of the Pacific Highway, shared-use paths on the western side, and improvements to pedestrian routes and urban design in Wyong town centre. This includes retaining existing footpaths with additional widening to minimise disruption to businesses and key underground utilities and further improving the urban design to enhance public amenity.

The Project REF described a left in, left out intersection at Apex Park to replace the Watanobbi Road intersection off North Road. The modification proposes design changes to the road width along the Pacific Highway adjacent to Apex Park, between North Road and Cutler Drive and would remove the previously proposed left in, left out access to Watanobbi Road from the Pacific Highway. Cyclists and pedestrians would be relocated onto an upgraded section of Watanobbi Road, which would remain a closed-off street parallel to the Pacific Highway.

The Project REF described an extension of the railway pedestrian bridge to connect the Wyong Railway Station directly to the Pacific Highway. The proposed modification does not include this extension and instead improves existing access to the station (at grade) via the Church Street traffic lights. A number of bus stops on the Pacific Highway would also be modified.

Given the interconnected nature and shared interface of the Wyong Rail Enabling Works Project and the Pacific Highway upgrade, the scope of the early works has been integrated with the proposed modification. This includes the re-alignment of a siding within the existing rail corridor, relocation of the overhead electrical lines under the rose street bridge and relocation of some rail utilities within the current rail corridor and modifications to a retaining wall for siding access along the Pacific Highway opposite the River Road intersection. All these works are required as a result of the surrounding highway and local road works for the proposal.

Further, the REF boundary has also been adjusted where necessary to accommodate the proposed modification, the rail enabling works and some potential temporary works for construction or traffic management.

2.2 Construction methodology

The construction methodology for the proposed modification is described in Table 1.

Table 1 Proposed construction methodology

Construction stage	Proposed construction methodology
South zone – Pacific Highway from Johnson Road to the intersection between Panonia Road and River Road, including the Wyong River bridge	
Stage 1	• Conduct traffic configuration activities • Site establishment • Demolish properties along McPherson Road • Establish a project management compound on Transport-owned land on the southern side of the Wyong River, west of South Tacoma Road • Carry out clearing and offline works • Carry out riverbank adjustments • Realign South Tacoma Road and Panonia Road • Relocate utilities • Construct new stormwater infrastructure and pavement • Switch traffic to new South Tacoma Road, Panonia Road, and McPherson Road alignments.
Stage 2	• Conduct traffic configuration activities • Commence bridge works - Establish working areas on both sides of the riverbank - Carry out clearing and grubbing activities for northern and southern approaches and abutments - Construct piling pads - Construct temporary bridge in river - Conduct piling for all piers and abutments - Construct pier column extensions - Construct pier headstocks and abutments - Backfill abutments and construct approach slabs - Install bearings to all abutments and piers - Remove temporary bridge and piling pads from river - Install girders with 500 tonne (t) mobile crane - Install barriers, drainage and throw screens - Place asphalt on southbound lanes - Switch Pacific Highway traffic to northbound lanes on new bridge.
Stage 3	• Conduct traffic configuration activities • Demolish the existing Wyong River bridge - Install a catch net to the underside of the existing bridge to collect debris - Mill off existing asphalt - Remove barriers, fences, light poles etc. - Install mobile crane/s on the southbound lanes of the new bridge - Cut concrete deck into sections and lift sections with crane to trucks on southbound lanes of new bridge - Remove lead paint to the extent required for demolition. Apply sealing paint to remaining painted area - Cut steel components into sections and lift section with crane/s to trucks on southbound lanes of new bridge - Demolish piers. - Construct abutment extensions to new bridge - Install the prefabricated cycleway on the eastern side of the new bridge - Complete southbound Pacific Highway approaches earthworks, retaining walls and pavements

Construction stage	Proposed construction methodology
	- Open traffic to new Pacific Highway alignment.
Central zone – Pacific Highway from the intersection between Panonia Road and River Road to the intersection between Anzac Avenue and Pacific Highway, including the Rose Street bridge	
Stage 1	• Construct temporary offset commuter car park (if required) • Demolish buildings • Relocate utilities • Construct the new commuter car park (except the top-level fronting Howarth Street) and commission • Construct the new bus layover area within the existing commuter car park east of the Wyong Railway Station and commission • Construct Howarth Street roundabout • Construct temporary Howarth Street alignment on the north-eastern side of the existing Howarth Street / Rose Street roundabout • Carry out rail infrastructure adjustments for bridge works.
Stage 2	• Conduct traffic configuration activities • Construct new Rose Street bridge - Establish sites on the eastern and western side of the railway line at rail level - Demolish / clear existing rail infrastructure either side of the existing bridge - Carry out rail adjustments - Install sheet piles on the southern side of the existing abutments to temporarily retain the existing reinforced soil wall - Progressively excavate southern verge batters, demolish reinforced soil wall, and install anchors into sheet piles - Install bridge piles - Construct pile caps, pile extensions, reinforced soil wall and precast fascia panels and backfill to underside of abutment sill beam - Consider whether temporary cutoff piles are required adjacent to the existing bridge to support new bridge approach backfill whilst old bridge is demolished, and approaches excavated - Construct new abutment sill beams and curtain walls - Install bearings - Install steel girders with a 500 t mobile crane located on the western side of the new Rose Street bridge and girders delivered from the Pacific Highway - Construct bridge deck - Install barriers and anti-throw screens - Backfill curtain walls and construct approach slabs - Carry out earthworks and install pavements to approaches • Construct retaining walls • Construct new southbound Pacific Highway alignment through existing commuter car park area • Construct Howarth Street south of Rose Street bridge • Remove the Howarth Street / Rose Street roundabout • Switch Rose Street traffic to new Rose Street bridge.
Stage 3	• Conduct traffic configuration activities • Demolish existing Rose Street bridge - Mill off existing asphalt - Jack the deck and replace bearings with temporary blocks - Remove screens, railings, etc

Construction stage	Proposed construction methodology
	- Cut off utilities channel and barrier parapets - Cut deck into single beam sections - Excavate approaches on both sides and demolish curtain walls to expose diaphragms at ends of girders - Establish large mobile crane (500 t) behind the west abutment - Conduct weekend rail possession works - Construct retaining walls (RW-MW9 and RW-M12). • Remove the 33 palm trees from the Pacific Highway (refer to Section 6.8.1 for details of diseased palms) • Construct the northbound Pacific Highway pavement • Open traffic to new Pacific Highway alignment • Complete construction of the Howarth Street and Rose Street intersection • Open traffic to new Howarth Street and Rose Street intersection.
North zone – Pacific Highway from the intersection between Anzac Avenue and Pacific Highway to the intersection between Cutler Drive and Pacific Highway	
Stage 1	• Relocate utilities including the sewer pumping station in Apex Park • Construct drainage swales and culverts • Construct southbound Pacific Highway
Stage 2	• Conduct traffic configuration activities • Switch Pacific Highway lanes to the new southbound lanes. • Complete culverts commenced in Stage 1 • Construct northbound Pacific Highway and connecting streets pavement.
Stage 3	• Complete works • Direct traffic to new Pacific Highway alignment.

2.3 Earthworks

The earthworks volumes estimated for the proposed modification are a total of 60,000 m^3 of cut and 66,000 m^3 of fill (6,000m^3 more fill than cut). There is therefore capacity for excavated materials to be reused within the project area where suitable. Imported engineered materials will be required for the road subgrade and services and therefore there will be an excess of cut due to the requirement of suitable engineered fill.

The proposed depth of cut is variable across the project area with excavations typically to a minimum depth of 0.8 to 1 m bgl to allow installation of the required road subgrade (where there are no changes from the existing surface to the design surface). Deeper excavations (>1 m bgl) would be required where existing embankments require cutting into or where the installation of new underground services or relocation of existing underground services is required.

3.0 Project area

The project areas is identified in **Table 2** and is shown in **Figure A.1**, **Appendix A**.

Table 2 Project area identification

Item	Description
Site Address	Pacific Highway, Wyong
Locality	North of Wyong Bridge: The project area starts on the Pacific Highway on the northern side of the Wyong River. The area continues North along the Pacific Highway until approximately 300m north of the intersection between Pacific Highway and Cutler Drive. The northern section includes areas surrounding the Wyong train station, including portions of Howarth and Rose Street. Portions of Panonia Road and River Road (adjacent to the Wyong River) are also included. Portions of intersections along the Pacific Highway are also included, such as Church Street, Alison Street, ANZAC Avenue, North Road, and Cutler Drive. This section is approximately 1.9km. South of Wyong Bridge: The project area starts on the Pacific Highway on the southern side of the Wyong River. This section includes portions of McPherson Road and South Tacoma Road. This section is approximately 450 metres in length.
Local Government Authority	Central Coast Council.
Previous Land Use Zoning	Unknown.
Environmental Planning Instrument	Central Coast Local Environmental Plan (LEP) 2022
Current Zoning	The majority of the works upgrade is zoned SP2 Infrastructure (Road and Traffic Facility). Smaller portions of the works upgrade area is zoned: • C3 – Environmental Management • E2 – Commercial Centre • E3 – Productivity Support • E4 – General Industrial • MU1 – Mixed Use • RE1 – Public Recreation • RE2 – Private Recreation • R3 – Medium Density Residential • W1 – Natural Waterways Land use zoning is shown on **Figure 1E** in Appendix A.
Current Land Use	Road and rail infrastructure, commercial/ industrial, residential, recreation, waterway / environmental management.
Proposed Ongoing Land Use	Road / rail infrastructure.
Section Area (Total)	Approximately 106 hectares (ha).
Site Location and Layout	Refer to **Figure A.1** through **Figure A.7, Appendix A**

4.0 Data quality objectives and indicators

4.1 Data quality objectives

A seven-step Data Quality Objective (DQO) approach was developed in both SAQPs developed for the Environmental Assessment (AECOM, 2023a), and Soil Vapour Investigation and Risk Assessment (AECOM, 2023b), to set QA/QC parameters for the investigation and laboratory program to ensure data of appropriate reliability would be used for the purposes of the assessment. The design of the DQO approach was undertaken in accordance with Appendix IV of the NSW DEC Guidelines for the NSW Site Auditor Scheme (3rd Edition), 2017.The DQOs as stated in the SAQP (AECOM, 2023) are presented in **Table 3**.

Table 3 Date quality objectives

Step	Data Quality Objective
Step 1. State the problem – Define the problem that necessitates the study	TfNSW is currently undertaking concept design for the upgrade of the Pacific Highway through the town of Wyong. TfNSW wants to gain an understanding of potential legacy contamination issues within the Project area and buffer area that have resulted from historical land use activities. The findings will inform the amelioration / management / remediation that may be required during construction of the Highway upgrade.
Step 2. Identify the goal of the study – State how environmental data will be used in meeting objectives and solving the problem, identify study questions, define alternative outcomes.	The objective of the investigation is to assess if potential contamination issues identified as part of the Phase 1 may present a risk to human health or the environment during construction activities. The inputs to the decisions required to meet the objective are discussed in Step 3. The key decisions to address the objectives of the investigation are: • What is the nature and extent of CoPCs in environmental media at the identified AECs? • Give an indicative Waste Classification / reuse for areas of cut. • Is groundwater present beneath the project area at a depth that may be intersected during construction? • What is the nature and extent of CoPCs in groundwater beneath and down-gradient of the AECs? • Does the data set provide sufficient information to evaluate whether complete SPR linkages exist for CoPC? • Are there any complete or potentially complete exposure pathways? • Does contamination, if identified, require remediation in order for the site to be considered suitable for the proposed land use?
Step 3. Identify information inputs – Identify data and information needed to answer study questions.	The primary inputs to assessing the contamination status of site will be: • Review of available site historical information • Review of available geological, hydrogeological and soil data • Observations of site conditions, potentially contaminating activities and environmental media during site inspection • Collection of representative samples of environmental media including fill, underlying native soil, sediment, and surface and groundwater (if present) • Using appropriate sample collection techniques to obtain samples representative of conditions at the site • Using appropriate analytical methods (i.e. NATA endorsed) with quantitation limits below the adopted assessment criteria • Assessing for the presence of CoPC in the sampled media at concentrations above NSW EPA-endorsed and other suitable assessment criteria.

Step	Data Quality Objective
Step 4. Define the boundaries of the study – Specify the target population and characteristics of interest, define spatial and temporal limits, scale of inference.	**Lateral**: The study boundaries included the project area boundaries as defined on **Figure 1**, **Appendix A**. **Vertical**: Intrusive investigations of soil, soil vapour and groundwater which were proposed to be undertaken up to a maximum depth of 3 mbgl for soil vapour, 6 mbgl for soil and 12 m bgl for groundwater. **Temporal**: Data used for the assessment will include: • data from historical documents reviewed in AECOM (2023a, and 2023b) • data collected during this DSI, assessed against NSW EPA endorsed guidelines currently in place.
	The decision rules for this investigation are as follows: 1. If it is determined that the data generated through this investigation are reliable and suitably characterise soil and groundwater contamination, the data will be compared against the adopted Soil Assessment Criteria (SAC), Groundwater Assessment Criteria (GAC). 2. If comparison of the data generated through this investigation meets the adopted SAC/GAC, then the project area will be considered suitable for the proposed commercial/industrial land use. 3. If comparison of the data generated through this investigation does not meet the adopted SAC / GAC, then further investigations, remediation and/or management will be recommended for specific AECs. If it is determined that the data generated through this investigation are not reliable and/or do not suitably characterise soil and groundwater contamination as required for determining land use suitability, then further investigations may be recommended prior to comparison against the adopted screening criteria.
Step 6. Specify performance or acceptance criteria – Develop performance criteria for new data being collected or acceptable criteria for existing data being considered for use.	The acceptable limits on decision errors applied for the project and the manner of addressing possible decision errors have been developed based on the Data Quality Indicators (DQIs) of sensitivity, precision, accuracy, representativeness, comparability, completeness (SPARCC) as described in **Section 4.2**.
Step 7. Develop the plan for obtaining data – Select the resource-effective sampling and analysis plan that meets the performance criteria.	The collection of data will be optimised by the development of an appropriate sampling and analytical strategy based on an understanding of site history and identified contamination from the previous investigation, site layout, and historical records. Soil, groundwater, surface water and sediment sampling locations will also be positioned to provide general coverage of the site in general accordance with NSW EPA Sampling Design Guidelines (2020).

4.2 Data quality indicators

The investigation data quality indicators (DQIs) were established in the SAQP (AECOM, 2024) to set acceptance limits on field and laboratory data collected at the Site. The DQIs are listed in **Table 4**. The field and laboratory data are assessed against the DQOs and DQIs in **Section 8.2**. Analytical data that failed to meet the predetermined acceptable limits of accuracy and precision were managed using the following corrective actions on a case-by-case basis:

- reanalysing suspect samples, provided sample or extract is within maximum holding time
- evaluating and amend sampling and/or analytical procedures
- re-sampling and re-analysis
- accepting the data with an acknowledged level of bias and imprecision
- discard the data.

Table 4 Date quality objectives

DQI	Media	Field	Laboratory	Acceptability Limits
Precision	Soil / Water	SOPs appropriate and were complied with: Collection of blind and split duplicate samples	Analysis of: Blind duplicate samples (1 in 20 samples non-PFAS) (1 in 10 for PFAS) Split duplicate samples (1 in 20 samples non-PFAS) (1 in 10 for PFAS) Laboratory duplicate samples	RPD of 0 to 30% RPD of 0 to 30% <10x LOR = No Limit 10-20x LOR = RPD 0% - 30% >20x LOR = RPD 0% - 30%
Accuracy	Soil / Water	SOPs appropriate and were complied with: Collection of rinsate blanks Collection of trip blanks	Analysis of: Rinsate Blanks (1 per sampling event) Trip Blanks (1 per laboratory batch) Method blanks Matrix spikes Matrix spike duplicates Surrogate spikes Laboratory control samples Laboratory prepared spikes	Non-detect for CoPC* Non-detect for CoPC* Non-detect for CoPC* 70 to 130% 70 to 130% 70 to 130% Dynamic recovery limits are based on statistical evaluation of processed LCS. 70 to 130%
Representativeness	Soil / Water	Appropriate media sampled according to SOP All relevant media sampled	All samples analysed according to SOP	

DQI	Media	Field	Laboratory	Acceptability Limits
Completeness	Soil / Water	All critical locations sampled All critical samples collected SOPs appropriate and complied with Experienced sampler Documentation correct	All critical samples analysed and all analytes analysed according to SOPs Appropriate methods Appropriate LOR Sample documentation complete Sample holding times as per ASC NEPM (2013)	As per ASC NEPM (2013) As per ASC NEPM (2013) < nominated criteria As per ASC NEPM (2013 As per ASC NEPM (2013)
Comparability	Soil / Water	Sample SOPs used on each occasion Experienced sampler Climatic conditions Same types of samples collected	Same analytical methods used (including clean-up) Sample LORs Same laboratories (NATA accredited) Same units	As per ASC NEPM (2013) < nominated criteria
Sensitivity	Soil / Water	SOPs appropriate and complied with	All critical samples and analytes analysed according to SOP's Appropriate methods applied Appropriate PQL's Analysis of laboratory control samples	(Applicable to Laboratory control samples) 59 to 139%

5.0 Site condition, history and environment

5.1 Site description

The project area comprises a section of the Pacific Highway through the township of Wyong, New South Wales. Wyong is located in the Central Coast about 92 km north of Sydney CBD and 74 km south of Newcastle. The site is situated to the north and south of the Wyong River. The Wyong River flows into Tuggerah Lake about 2.5 km to the east. The foothills of Ourimbah State Forest are located about 3.5 km to the west of Wyong Town Centre.

The areas adjacent to the Pacific Highway Upgrade comprise mostly industrial, commercial or residential properties, the Pacific Highway, adjoining roads, pavements, and the Main North Railway Line corridor orientated in a North – South direction through the proposed upgrade works. Low lying lands are present south of the river with a swamp, lake and Pioneer Creek on the eastern side of the Pacific Highway in the Wyong River floodplains and several industrial businesses and services stations on the west side of the Pacific Highway.

The land directly north of the river is dominated by residential areas on the east and a public reactional area known as Wyong Centennial Park on the west on the riverbank. The town centre consists of Wyong railway station and commercial premises and sporting facilities. Wyong Racecourse is present directly north-east of the town centre and further low-lying swamp lands and Wyong Golf Club are present north of the racecourse. More residential areas are present north-west of the site with several service stations situated on the west along the Pacific Highway. A sewage pumping station also exists in this area.

5.2 Topography and drainage

The project area is located on relatively flat terrain surrounded by existing industrial, commercial and residential properties. The existing highway generally follows the local topography with some cutting and filling, particularly near Wyong Station. The site topography can be considered in three major parts: south of Wyong River; Central region within Wyong Town Centre and north of Wyong Centre.

The southern part is mainly characterised by broad (about 2 km wide), poorly drained, deltaic floodplains and alluvial flats with low lying, slightly elevated terraces are occasionally present. A gradual slope is present from west to east. Site drainage is predominantly to the north towards Wyong River via the road network.

The central region within Wyong Town Centre is gently undulating to rolling low hills. Closer to Wyong Station, the topography has been significantly altered by existing land use. An elevation difference of about 5 m exists from the existing Pacific Highway to the western entrance of Wyong Station. There is an elevation difference of about 2 m from the commuter carpark on the eastern side of Wyong Station to Howarth Street.

The northern part of the site is mainly characterised by very gently sloping terrain towards the northern end of the route at about 1-3°. Open drainage channel feed into existing culverts crossing the Pacific Highway which outfall into the swamp area north of the Wyong Racecourse.

The natural ground surface level from the southern end of the proposed upgrade on the Pacific Highway is generally flat at about RL 3 m AHD, rising to about RL 18 m AHD at the Rose Street bridge north of Wyong Station before dipping down to about RL 2 m AHD at the northern end. The topography and elevation map of the project area is shown in **Figure 1.B** in **Appendix A**.

5.3 Geology

Reference to the Digital NSW Seamless Geology and Gosford-Lake Macquarie (Sheet 9131 and part sheet 9231) indicates that the project area is underlain by various Quaternary Alluvial Floodplain Deposits (QH_af) overlying Munmorah Conglomerate (Tncm) and Patonga Claystone (Tncp) bedrock. Patonga Claystone (Tncp) can be found north of the Wyong River and underlies the surrounding Wyong Town Centre area in the centre of the project area.

Quaternary alluvial floodplain deposits comprising of silt, very fine to medium grained lithic to quartz-rich sand, and clay extend from the southern end of the project area to about 100 m north of the Wyong River bridge. Anthropogenic deposits i.e., fill on Quaternary deposits, are present at the southwest of the project area where the industrial business and service stations are situated, and at the northern end of the project area at the Wyong Racecourse.

The geology then transitions to Patonga Claystone from the Triassic Age Narrabeen Group and is typified by red brown claystone and siltstone, light green-grey fine-grained sandstone. Patonga Claystone overlies the Munmorah Conglomerate and is therefore encountered at the higher elevations around Wyong Town Centre.

The project area is underlain by alluvial valley deposits comprised of silt, clay, (fluvially deposited) lithic to quartz-lithic sand, and gravel before further anthropogenic deposits are present at the Wyong Racecourse as the ground elevation falls towards the northern end of the project area.

The regional geology in the project area in shown in **Figure 1.C** in **Appendix A**.

5.4 Soil

Reference to the 1:100,000 Soil Landscapes Sheet of Gosford-Lake Macquarie indicates that most of the project area to the south of Wyong River is underlain by the Wyong Soil Landscape (Alluvial). The soil landscapes then transition to the Woodbury's Bridge Soil Landscape (Residual) within the central region of the project area near Wyong Station and Gorokan Soil Landscape (Erosional) at the northern end. A section of Disturbed Terrain is also present at the Wyong Racecourse adjacent to the northern section of the project area.

A summary of the soil landscapes units and their descriptions within the project area from the 1:100,000 Soil Landscapes Sheets is presented **Table 5** and their distribution is shown in **Figure 1.D** in **Appendix A**.

Table 5 Summary of soil landscape units

Landscape Grouping	Soil Landscape	Landscape	Soils	Limitations
Alluvial	Wyong (wy) (100km^2)	Broad poorly drained deltaic floodplains and alluvial flats of Quaternary sediments on the Central Coast Lowlands. Slope gradients <3%; local relief <10 m. Meander scrolls, oxbows, and swamps are common. Extensively cleared open forest.	Deep (>200cm) Yellow Podzolic Soils Brown Podzolic Soils, Soloths with some Humus Podzols around lake edges.	Flooding, seasonal waterlogging, foundation hazard, permanent waterlogging (localised), acid sulphate potential, (localised), strongly acid, poorly drained, impermeable soils of very low fertility with saline subsoil.
Residual	Woodburys Bridge (wo)	Gently undulating rises to rolling hills on Patonga Claystone. Local relief 40-80 m and slope gradients up to 20%. Sandstone capping on crests of steeper hills is common. Predominantly cleared tall open forest.	Deep (>150cm) Red Podzolic Soils with some Soloths in poorly drained areas on claystone bedrock; shallow to moderately deep (50-150 cm) Yellow Podzolic Soils on sandstone bedrock.	Extreme erosion hazard, high foundation hazard, seasonal waterlogging (localised), acid soils of very low fertility, low wet bearing strengths and high erodibility.

Landscape Grouping	Soil Landscape	Landscape	Soils	Limitations
Erosional	Gorokan (gk)	Undulating low hills and rises on lithic sandstones of the Tuggerah Formation. Local relief ,30 m; slope gradients <15%. Broad crests and ridges, long gently inclined slopes, and broad drainage lines. Partially cleared low open forest.	Moderately deep (50-150 cm) Soloths and Yellow Podzolic Soils on ridges and crests; Soloths Yellow Podzolic Soils and grey-brown podzolic soils on slopes with Gleyed Podzolic Soils along drainage lines.	Very high erosion hazard, foundation hazard (localised), seasonal waterlogging, hardsetting, strongly acid, low fertility, plastic, impermeable soils.
N/A	Disturbed Terrain (xx)	Level plain to hummocky terrain, extensively disturbed by human activity, including complete disturbance, removal or burial of soil. Local relief and slopes highly variable. Landfill includes soil, rock, building and waste materials. Original vegetation completely cleared, replaced with turf or grassland.	Highly variable.	Highly variable depending on the site. Limitations may include mass movement hazard, steep slopes, foundations hazard, unconsolidated low wet bearing strength materials, impermeable soils, poor drainage, erosion hazard, very low fertility and toxic materials.

5.5 Acid sulfate soils

The risk of occurrence of ASS within the project area from the NSW Department of Planning Environment Acid Sulphate Soils risk maps show area ranges from lowest likelihood (Class 5) to highest likelihood (Class 1).

Class 1 soils are found within the bottom sediments beneath Wyong River and in the lowlands close to Wyong River. In contrast, within the northern and central section of the Pacific Highway and including Wyong Station, the risk is categorised as Class 5 which indicates these areas are within 500 m of Class 1 to 4 areas.

Class 3 soils which indicates that there is a high probability of ASS occurrence between 1 m and 3 m below the ground surface, are found to the south of Wyong River to about the intersection with Johnson Road, Tuggerah.

5.6 Hydrogeology

The groundwater data indicates that the depth to the groundwater table generally follows the local topography. Historical data show that depth to groundwater has ranged from about 1 to 4 m bgl and from 0 to 15 m AHD. It is typically shallower near the Wyong River and lowlands area. However, it is quite variable near Wyong Station and the surrounding Town Centre area. The groundwater elevation also typically rises as the underlying depths to bedrock rise, however the depth to bedrock varies.

South of Wyong River, the data suggests that groundwater tables are generally deeper than 1 m below existing surface. North of Wyong River within the central portion, limited groundwater observations were made with groundwater generally at least 3 m below existing ground surface level.

The shallowest depth to groundwater was recorded near Cutler Drive within the northern extent of the project area. For the remainder of the region the groundwater was typically deeper. No long-term

groundwater investigation was carried out in the previous investigations. Groundwater levels change over time due to many factors including rainfall and existing land use. There can also be seasonal variations in groundwater levels.

5.7 Climate

Climate data from the closest weather station, Norah Head AWS (site 061366) located 14 km east from Wyong shows that the highest mean maximum temperature occurs in January (26) and the lowest in July (17.6). The highest mean rainfall occurs in June (147 mm) and the lowest in September (61.7 mm) based on data collected since 1995. The following rainfall was recorded during the investigation period:

- 28 October to 21 December 2023 (soil sampling/well installation): the total rainfall for October 2023 was 61.6 mm, November was 161 mm and December 81.2 mm
- 4 February to 8 April 2024 (soil sampling/well installation): the total rainfall during February 2024 was 115.2 mm and 17.2 mm in March 2024
- 10-12 April 2024 (groundwater sampling): 204.2 mm in prior 30 days and 6.8 mm in prior three days to sampling event
- 23 April 2024 (soil vapour sampling): 382 mm in prior 30 days, including 179.8 mm in three days prior to sampling event.

5.8 Previous investigations

Previous contamination investigations within the project area were reviewed in the SAQP (AECOM, 2024). The data obtained from the previous reports were used to develop the preliminary conceptual site model in **Section 5.9** and the previous reports are summarised in **Table 6**.

Table 6 Summary of previous reports

Reference	Report title and summary
Parsons Brinckerhoff (PB) (2013)	**Wyong Town Centre Phase 1 Assessment** PB undertook a preliminary site assessment (PSI) for the project area. The PSI comprised a desktop assessment which identified potential sources of contamination. • potentially contaminated heterogeneous fill material in the subsurface • petroleum hydrocarbons from the use of adjacent car dealerships and two service stations • chemical residues associated with vehicle storage at the car dealerships and the repair shop where cleaning agents and solvents are stored and an oil water interceptor is present • ballast material and rail infrastructure used along the rail line • coal tar, bitumen, road base and vehicle emissions from the highway and adjacent roads • potential for acid sulfate soils. No sampling or analysis was undertaken as part of the scope.
PB (2014a)	**HW10 Pacific Highway – Wyong Town Centre: Road Pavement and Geotechnical Investigation Factual Report** PB carried out a combined pavement and geotechnical investigation (GI) to characterise the subsurface conditions along the proposed route alignment. While this geotechnical assessment did not target contamination, PB (2014a) did report "*A strong odour of contamination was noted in T051 in the depth range 0.5 to 1.0m*." TP051 is located in the rail holding yard on the eastern side of Pacific Highway (across the highway from ANZAC Avenue).

Reference	Report title and summary
PB (2014b)	**HW10 Pacific Highway – Wyong Town Centre: Road Pavement and Geotechnical Investigation Interpretive and Design Report** The report comprised a desktop review to provide recommendations for additional ground investigations. An additional potential source of contamination was identified, being an underground storage tank at 146 Pacific Highway (near the Aldi shopping centre).
SMEC (2014)	***Pacific Highway Upgrade through Wyong Town Centre: Geotechnical Investigations Plan*** *"There is a risk of potential disturbance of asphalt / coal tars. Evidence (visual and olfactory) of pavement layers containing coal tar was recorded in a number of test pits in both historical RMS and current investigations. A strong odour of contamination was noted in T051 (Sydney Trains maintenance yard) in the depth range 0.5 to 1.0m. Contamination testing should be considered during design stages of the project."* T051 reportedly encountered residual soil directly beneath unbound pavement fill material.
SMEC (2015)	**Pacific Highway Upgrade through Wyong Town Centre: Soil and Water Technical Paper** The technical paper identified the potential impacts that the project may have on soil and water environments and the management measures that would be appropriate to apply to mitigate the potential impacts. The report was prepared to support the initial Review of Environmental Factors (REF) (2015) for the proposed upgrade works. The report concluded further investigation would be required where ancillary sites are proposed to facilitate construction works, additional contaminated land assessment in accordance with the relevant NSW EPA guidelines would be undertaken to assess the suitability of the site and any management measures that may be required.
SMEC (2016)	**Pacific Highway Upgrade through Wyong Town Centre: Geotechnical and Contamination Factual Report** Supplementary geotechnical and contamination ground assessment for the Wyong Town Centre Upgrade to assist with the concept design of the project. The investigation comprised drilling nine combined geotechnical and environmental boreholes, and eight environmental boreholes to depths ranging from 4 to 29 metres below ground level (mbgl) using truck and track-mounted drilling rigs. Three groundwater monitoring and sampling wells were installed in pre-selected locations. Soil samples were analysed for heavy metals, TRH, BTEX, PAHs, PCBs, OCP, OPPs and asbestos. All results were stated to be less than the adopted human health based assessment criteria, however AECOM notes the following exceedances: • BHE20_0-0.1: benzo(a)pyrene TEQ (LOR) – 55 mg/kg (NEPM 2013 – HIL D – 40 mg/kg) (located adjacent to Shell service station) • BHE22_0-0.1: benzo(a)pyrene TEQ (LOR) – 58 mg/kg (NEPM 2013 – HIL D – 40 mg/kg) (located adjacent to Aldi) Asbestos containing material (ACM) was detected in three samples from the rail corridor: • SP2 Pipe (stockpile sample) • BHE07 (surface sample) • BHE08 (surface sample) The sampling locations are shown on Figure 4.2 in **Appendix C** extracted from SMEC (2016).

Reference	Report title and summary
ARCADIS (2018)	**Geotechnical Interpretive and Design Report – Wyong Station: New Intercity Fleet Program – Station and Signalling Enabling Works for Central Coast and Newcastle Line** Arcadis was engaged by Downer EDI Pty Ltd (Downer), to undertake geotechnical interpretation and detailed design for the Station and Signalling Enabling Works (SSEW) for the New Intercity Fleet (NIF) program commissioned by TfNSW. The scope included contamination assessment from two boreholes within the rail corridor adjacent to Wyong Station. No comparison / interpretation of environmental results were undertaken by Arcadis. An initial screen of these results indicate that they are generally <LOR, with a few minor detections; however AECOM notes that the shallowest sample was collected at 1.5 mbgl.
AURECON (2020)	**Pacific Highway upgrade Wyong Town Centre: Geotechnical Investigations Scope and Brief Review** Aurecon was commissioned by TfNSW to undertake a review of the geotechnical investigations scope and brief for the proposed Pacific Highway upgrade through Wyong town centre project. The report included a recommended sampling and analysis scope of works.
LOTSEARCH (2023) *(on behalf of AECOM)*	**Pacific Highway, Wyong, NSW 2259** AECOM requested an "EnviroPro" report from Lotsearch to assist with the development of this SAQP, and to identify notable changes to the site area and surrounds with regard to contamination since the Phase 1 in 2013. The report presents data gathered from over 600 separate datasets to note potential contamination sources and receptors. Historical and active businesses pose risk of contamination in the project area (i.e. dry, cleaners, motor garages, and service stations).
AECOM (2024)	**Sampling, Analysis and Quality Plan 1, Wyong Town Centre - Environmental Assessment** As part of the preparation of the SAQP (AECOM, 2024), a review of site history was undertaken to inform the 10 year data gap between the original PB (2013) PSI for the project area undertaken in 2013 and 2023. Additional potential contamination sources identified in the review were: • A former dry cleaners (Wyong Dry Cleaners, Railway Square) listed in UBD records in 1961 and 1970 (potential off-site source of chlorinated hydrocarbons/ VOCs) • Wyong Fire Station located approximately 70 m west of the road works upgrade area (potential off-site source of PFAS contamination). Based on the review the areas of environmental concern (AECs) and COPC were updated and documented in the SAQP.

5.9 Preliminary conceptual site model

The preliminary conceptual site model (CSM) for the project area was developed in the SAQPs (AECOM, 2024a/b) and was considered in its current and proposed ongoing public infrastructure use. A CSM describes the source-pathway-receptor (S-P-R) exposure pathways that may be present. For a receptor to be exposed to a chemical contaminant, a complete exposure pathway must exist. An exposure pathway describes the course a chemical or physical agent takes from the source to the exposed individual or ecological receptor.

The surrounding project area was also considered to potentially factor in existing commercial and industrial uses which may have direct or indirect effects to the project area. The preliminary CSM is presented in **Table 7** to **Table 9**. Due to the insufficient data prior to this investigation all S-P-R pathways were considered potentially incomplete. A risk ranking of low, moderate and high was applied based on the likelihood and severity of the risk being present. The revised CSM based on interpretation of the results from this DSI is presented in **Section 10.1**.

Table 7 Areas of environmental concern (AECs)

AECs	Potential contamination sources	Typical associated CoPC	AEC Risk ranking
AEC 1: Ampol Service Station,	Underground petroleum storage	TRH, BTEXN, PAHs, Lead, Phenols	Moderate
AEC2, 3 & 4: Various industrial warehouses and mechanical workshops adjacent to project area	Mechanical workshop Potential for underground storage tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, Solvents, ACM	Moderate
AEC 5: Auction house. Directly in footprint of project area	Storage of motor vehicles	TRH, BTEXN, PAHs, Metals, Phenols, Solvents, ACM	Moderate
AEC6: Electrical sub-station adjacent to project area	Electrical transformers	Metals, Polychlorinated Biphenyls (PCB)	Low
AEC7: Wyong Train station, not directly impacted by development	Unregulated fill material	ACM, TRH, BTEXN, PAH, Phenols, Pesticides, PCB, Metals	Low
AEC8: Recreational Building	Building materials	ACM, Lead (Paint)	Moderate
AEC9: Empty building lot in footprint of development. Building demolished 2020	Building materials	ACM, Lead (Paint)	Moderate
AEC10: Water Pumping station	Water processing	Aluminium, Arsenic, Cadmium, Chromium, Cobalt, Lead, Nickel, Lime, Zinc and Fluoride	Low
AEC11: Shell service station directly adjacent. Associated Carwash. Nearby Fire Station	Underground petroleum storage Historical use/storage of Aqueous Film Forming Foam (AFFF)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, PFAS, asbestos	High
AEC12: Car Repairs / Workshop	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, Solvents, resin, asbestos	Moderate
AEC13: RailCorp holding facility	Former odours identified by PB (2014) in testpit T051 (0.5-1.0 mbgl)	TRH, BTEXN, PAHs, Phenols, Metals, Nitrates and Ammonia	Low
AEC14: Used car dealership	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, Chlorinated Hydrocarbons (CHC), Ammonia, PFAS and ACM	Moderate

AECs	Potential contamination sources	Typical associated CoPC	AEC Risk ranking
AEC15: Potential uncontrolled fill on river banks	Potential uncontrolled fill on river banks	TRH, BTEXN, PAH, Phenols, Pesticides, PCB, Metals and ACM	Moderate
AEC16: Former Service Station	Former Service Station (now vacant land) ACM previously identified on surface	TRH, BTEXN, PAHs, Lead, Phenols and ACM	Moderate
AEC17: Area adjacent to Pacific Highway and railway	Unregulated fill material	ACM, TRH, BTEXN, PAH, Phenols, OC, OP, PCB and Metals	Low
AEC18: Former Dry Cleaners / adjacent former Sheet Metal Workers / former Lubricating Oils	Former Dry Cleaners / former Lubricating Oils / adjacent former Sheet Metal Workers	Volatile Organic Compounds (VOCs), TRH, PAHs, Phenols, Metals and ACM.	Moderate
AEC19: Former Motor Painters and Panel Beaters	Former Service Station	TRH, BTEXN, PAHs, Metals, Phenols, CHCs and ACM	Moderate
AEC20: Potential ACM pipe	Potential ACM pipe	ACM	Moderate
AEC21: Potential former UPSS (ALDI Site)	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, Solvents, resin, asbestos	Moderate
AEC22: Former “Fibrous Plaster Manufacturers” and potential former Service Station	Former Fibrous Plaster Manufacturers and potential former Service Station	ACM, TRH, BTEXN, PAH, Metals	Moderate
AEC23: Current Service Station	Current 7-Eleven Service Station	TRH, BTEXN, PAHs, Lead and Phenols	Moderate
AEC24: Fill - Adjacent Pacific Highway northern end of project area	Unregulated Fill material	TRH, BTEXN, PAH, Phenols, OC, OP, PCB and Metals	Low
AEC25: Coal Tar Pavements	PB (2014) - Areas where coal tar was noted on the pavement core engineering logs include: C058 and C070 (PB, 2014); and 2037-55, 2037-56, 2760-S3A, 2760-S4B, 2760-N2B, 2760-N2A and 2760-N3A (TfNSW).	PAH, Phenols and Benzo(a)Pyrene (BaP).	Moderate
AEC26: Potential ACM Pipe	Potential ACM pipe	ACM	Moderate

Table 8 Potential transport mechanisms, receptors and pathways

Item	Description
Transport mechanisms	• Potential leaks and spills during site construction works to surrounding soils. • Potential release of HAZMAT to surface soils during demolition of current buildings and houses within the Project Area. • Aerial dispersion of potentially contaminated soil derived dusts during construction works. • Leaching of contaminants from soils to groundwater and subsequent migration. • Volatilisation of volatile CoPC within soil and groundwater. • The release of contaminants from soils to surface water-run off and subsequent migration through the surface water network. • Sorption of contaminants from surface water to sediments and potential rerelease during high flow events or sediment disturbance. • Potential release of contaminants from groundwater where dewatering processes may occur. • Potential application of contaminants to soils during wetting down procedures where potentially contaminated waters (such as dewatered groundwater) may be beneficially reused on-site.
Human health receptors	• Intrusive maintenance workers including intrusive maintenance workers who may be involved in construction works during the development of the Highway upgrade and future sub-surface maintenance workers upon the completion of construction activities. • Commercial workers who may be present during construction but undertake no intrusive works (this is considered to include site visitors). • Offsite receptors such as surrounding residents, commercial and agricultural workers is outside of the scope of this DSI and have therefore not been considered further.
Ecological receptors	• Aquatic ecological receptors in of the Wyong River estuary and associate tributaries. • Terrestrial ecological receptors present within the project area.

Table 9 Potentially exposure pathways – human health

Exposure Pathways / Receptors	Dermal contact and incidental ingestion of soil	Inhalation of soil derived dust in indoor and outdoor air	Inhalation of soil and groundwater derived vapour in indoor and outdoor air	Dermal contact and incidental ingestion of groundwater	Dermal contact and incidental ingestion of surface water and sediments
Intrusive maintenance workers	ü	ü	ü	ü	ü
Commercial workers and site visitors	û[1]	ü	ü	û	û

Notes:
[1] Commercial workers and site visitors are not expected to undertake intrusive works on-site where they may come in contact with soil, groundwater, surface water or sediments.

6.0 Methodology

6.1 Preliminaries

All service locations were searched prior to intrusive works using AECOM's underground services clearance procedure including:

- review "Before You Dig Australia (BYDA)" plans for the site as part of assessment of potential services in the vicinity of the investigation area
- review of site-specific plans where available
- clearing and marking of each sample location by an accredited service locator.

6.2 Soil investigation

A total of 52 boreholes, 18 test pits, five hand augers and two pavement cores were completed for the soil investigation. The investigation methodology completed is described in **Table 11**. The investigation locations are shown on **Figure 2.A** to **2.E** in **Appendix A**

The soil investigation was completed during two mobilisations as detailed in **Table 10**. Environmental soil sampling was conducted simultaneously during the geotechnical investigation work. The sampling locations were labelled as the aligned geotechnical for convenience of the site work and quality purposes.

Investigation locations completed along with completion date, termination depth and method type are listed in **Table B1** in **Appendix B**. Borelogs and test pit logs are presented in **Appendix F**.

Table 10 Soil investigations

Mobilisation	Type	No.	Locations

Table 11 Soil investigation methodology

Activity	Details
Soil sampling –hand augers & solid stem auger	Soil samples were collected from surface (avoiding turf and/or road base materials), within underlying fill, at changes in soil profile, and from the natural soils (if encountered). The following approach was undertaken: • where fill material was identified from surface, contamination sampling/observations continued until at least 1m into natural material and to a minimum depth of 3.0 m bgs. • where natural material was observed from the surface, contamination sampling/observations is to continue until 3.0 m bgs. Boreholes were backfilled in the order of excavation following the completion of soil sampling activities. Completed boreholes that were not converted into monitoring wells were grouted to the ground surface. Excess drilling cuttings were placed into skip bins for storage prior to off-site disposal to a licensed waste facility after waste classification. Waste disposal records are included in **Appendix J.**
Soil sampling – test pits	Test pits were advanced following service location by scraping the surface with a flat edge bucket in 200 mm intervals for the top 1.5 m bgs. Test pits were inspected following every scrape for evidence of potential unidentified services. All excavated soil materials were inspected for visual indicators of potential asbestos containing materials (ACM). Where visual assessment indicated the potential for ACM a sample was collected for absence / presence. Soil samples were collected directly from the centre of the bucket where soil was not in contact with the bucket walls. Soil samples were collected from surface (avoiding turf and/or road base materials if present), within underlying fill, at changes in soil profile, and from the natural soils (if encountered), up to a maximum depth of 5 m bgs. Additional samples were collected where evidence of contamination was observed. Test pits were backfilled in the order of excavation following the completion of soil sampling activities.
Soil sampling – large diameter boreholes / Test pit locations on road	Test pit and pavement core locations on the road were drilled using a large diameter (260 mm) auger on a pavement coring truck. The existing asphalt and/or concrete layers were cored using a diatube or handheld concrete corer. Soil samples were collected directly from the auger. Large diameter test pits and pavement cores were backfilled in the order of excavation following the completion of soil sampling activities.
Sample handling and preservation	Samples were handled using a clean pair of disposable nitrile gloves. A new pair of nitrile gloves will be worn for each sample collected. Samples were collected into the following laboratory-supplied sample vessels: • glass jars fitted with Teflon-lined lids and filled with zero headspace remaining (to minimise the loss of VOCs) for chemical analysis (except PFAS) • HDPE jars for PFAS

Activity	Details
	• zip lock plastic bags (asbestos). Samples were labelled with details including: • date and time sampled • project number • field ID • sample preservatives used. Samples for chemical analysis were placed into insulated eskies with ice immediately after sampling and then stored in the fridge until transit to the laboratory. Samples were transported to the primary laboratory under chain of custody (COC) protocol.
Soil logging	The soil profile was logged during the intrusive works in accordance with Australian Standard (AS) AS1726. Samples were logged and information recorded in the field (e.g. soil/rock type, colour, grain size, inclusions, moisture conditions, staining and odour etc.).
Soil screening	Soil sub-samples were placed in snap-lock plastic bags and the vapour headspace screened in the field for VOCs using a calibrated photo-ionisation detector (PID) equipped with a 10.6 eV lamp. The headspace reading will be taken at ambient temperature (not in sun) and approximately 5 minutes after collection of the sample. The headspace readings will be recorded on the bore logs.
Sample coordinates	GPS coordinates will be collected at all sampling locations by a project surveyor.

6.3 Asphalt cores

Asphalt cores were sampled by extracting fragments of pavement from selected cores. The sample was collected from layers within the core which indicated potential presence of coal tar. A total of 24 samples were collected and submitted to the laboratory for analysis for the presence/absence of coal tar.

6.4 Groundwater investigation

The groundwater investigation methodology completed is described in **Table 12**. The groundwater monitoring wells were installed during both drilling mobilisations. Groundwater monitoring wells were developed after they were installed. The groundwater sampling event of new and existing monitoring wells was conducted between 10 and 12 April 2024.

Groundwater monitoring well locations installed along with completion date, termination depth and method type are listed in **Table B1** in **Appendix B**. Groundwater monitoring well locations are shown on **Figure 2.A** to **2.E** in **Appendix A**. Installation details are included in construction logs are in **Appendix F**.

Table 12 Groundwater investigation

Activity	Details
Groundwater monitoring well installation	Where groundwater was identified at depths <10m bgs during drilling a machine slotted and solid uPVC casing was installed into the borehole, followed by backfilling with washed sand around the slotted screen section and a bentonite seal above the slotted section. The annulus around the well casing was then backfilled to surface with grout. New monitoring wells were developed within 24 hrs of installation. Groundwater development comprised purging a minimum of 3 times well volumes or until dry (whichever occurred first).

Activity	Details
	Following installation, the elevation of the top of PVC casing of the newly installed groundwater monitoring wells were surveyed to metres Australian Height Datum (m AHD), for groundwater elevation contouring purposes. Surveying was undertaken by a registered surveyor. Survey also included collection of GPS coordinates for each well.
Groundwater gauging	Measurement of standing water levels (SWLs) in all newly constructed groundwater monitoring wells were conducted in accordance with the AECOM standard operating procedure (SOP) for Groundwater Level Gauging. All measurements were taken within one day, and in as close succession as possible, using a calibrated oil/water interface probe (IP). All measurements were taken from the same point at the top of the uPVC casing (a notch, or mark was placed into the edge of the casing to assure consistency in measurement). All measurements were recorded to 3 decimal places.
Groundwater sample collection	Groundwater samples were collected from the wells using low-flow sampling techniques in accordance with AECOM SOP for Groundwater Sampling (Low Flow Pump). Sampling of the newly installed monitoring wells was conducted at least a week after installation to allow for the groundwater to recharge and suspended sediments to settle. Prior to sampling, monitoring wells were purged (to ensure connectivity with the wider aquifer) using peristaltic pump fitted with High Density Polyethylene (HDPE) tubing, with the tubing intake set at the approximate midpoint within the well screen interval. Monitoring wells were purged until *ex-situ* measurements of groundwater field parameters had stabilised. Parameters were considered stable when consecutive readings over four minutes are recorded within: • ± 10% for dissolved oxygen (DO) • ± 3% for electrical conductivity (EC) • ± 0.05 for pH • ± 10mv for redox potential (ORP) • ± 0.2°C for temperature.
Sample handling and preservation	Sampling was undertaken using a clean pair of disposable nitrile gloves for each well. Samples were collected into laboratory supplied bottles and vials (with appropriate preservatives as applicable). Vials for were filled with zero headspace. Groundwater samples for metals analysis were field filtered with a 0.45 µm disposable filters prior to preservation. Samples were labelled with details including: • date and time sampled • project number • field ID • sample preservatives used. Samples for chemical analysis were placed into insulated eskies with ice immediately after sampling. The samples were transported to the primary laboratory under chain of custody (COC) protocol.

6.5 Soil vapour

The soil vapour investigation methodology completed is described in **Table 13**. Soil vapour monitoring well locations are shown on **Figure 2.E** in **Appendix A**. Installation details are included in construction logs are in **Appendix F**. The soil vapour monitoring wells were installed on the following dates:

- BH26/GW26/ SV01: 24 March 2024
- BH27/GW27/SV02: 25 March 2024
- BH28/GW28/SV03: 26 March 2024
- BH29/GW29/SV04: 26 March 2024

Soil vapour sampling was undertaken on the 23 April 2024.

Table 13 Soil vapour methodology

Item	Details
Well installation	The bores were drilled to the maximum depth of 3m bgs or 0.5m above the groundwater depth. A Teflon lined tubing attached to the soil vapour probe and the probe placed at the bottom of the well vertically. Borehole backfilled with washed sand above 0.1m above the probe level followed by 0.1m dry bentonite and wet bentonite. The annulus around the well casing was then backfilled to surface with grout. The probes were installed at the following intervals: • SV1: 1.4 - 1.5 mbgl (shallow) and 2.9 -3.0 mbgl (deep) • SV2: 0.5 - 0.6 mbgl • SV3: 1.6-1.9 mbgl • SV4: 2.3 -2.4 mbgl
Well leak detection	Integrity / leak testing was carried out on the soil vapour wells. The initial PID reading was recorded from the well before conducting the leak test. Leak detection was conducted for a period of 5 minutes using isopropanol, in accordance with the AECOM SOP for soil vapour leak detection. The following was undertaken: • A shroud was placed over the well, and the sampling line was passed through a hole (port) in the bucket. An isopropanol soaked cloth placed in the in an open ziplock bag beneath the shroud. The edges of the shroud were sealed with wetted washed sand • Allow the isopropanol to evaporate and fill in the shroud. • Record the PID reading in the shroud before starting the leak test. • PID readings was taken from the sampling line approximately for 5 minutes after the initial reading. Stabilised PID reading in the sampling line and the final concentration in the shroud recorded. • The collected canister samples were also analysed for isopropanol.
Well Purging	Prior to sampling, soil vapour sampling locations were purged using a sterile syringe to remove a known purge volume. Measurements were taken with a PID and a landfill gas analyser (used to obtain stabilised readings of carbon dioxide, oxygen and methane) prior to and after sampling to assess well integrity and to ensure field parameters were stable and well atmosphere representative of surrounding environment. Well purging parameters were recorded.

Item	Details
Well Sampling	The sampling was conducted using stainless steel evacuated canisters as per the AECOM Field Quality Manual (FQM) 3.06 Soil Vapour Sampling – Stainless Steel Canister. A laboratory supplied stainless steel flow controller attachment was set collect the sample at a constant rate over the set period: allowing a time-weighted average air concentration to be obtained.
Quality Control Sampling	One duplicate sample was collected per event and leak detection testing was carried out using isopropanol.
Sample handling and preservation	At completion of sampling the canister valve was closed, and samples were transported to the primary laboratory under chain of custody (COC) protocol.

6.6 Decontamination

Decontamination is performed for field equipment to eliminate the possibility of cross-contamination from previous jobs or between sampling locations. In general, decontamination consisted of washing equipment in a PFAS free detergent solution (Liquinox) followed by deionised, distilled, or clean water rinse(s).

Decontamination was performed before initial use of any equipment at the site and after each subsequent use. Decontamination procedures were utilised during soil boring, well installation and groundwater sampling on all reusable equipment.

Following completion of sampling and decontamination of sampling equipment, one rinsate blank sample was collected per day of sampling to assess the effectiveness of decontamination protocols. The rinsate sample was collected by running laboratory supplied distilled water over a decontaminated item and decanting directly into laboratory-prepared sample bottles.

6.7 Laboratory analysis

All samples were relinquished to:

- Australian Laboratory Services (ALS) - the primary laboratory for soil and groundwater samples (NATA accreditation #825)
- Eurofins Scientific (Eurofins) – the secondary laboratory for soil and groundwater samples, primary laboratory for soil vapour samples (NATA accreditation #1261)
- Envirolab Group (Envirolab) – the primary laboratory for coal tar analysis (NATA accreditation #2901)

The sample analysis suites are summarised in **Table 14.** Laboratory methods by the primary laboratory are detailed in the Quality Control Interpretive (QCI) reports in **Appendix H**.

Table 14 Laboratory analysis

7.0 Assessment criteria

7.1 Soil

7.1.1 Human health

The adopted Tier 1 soil assessment criteria is outlined in Table 15.

Table 15 Human health assessment criteria

Selected Assessment Criteria	CoPC	Rationale
ASC NEPM (2013): • Soil Health Screening Level (HSL) D • Health Investigation Level (HIL) D	• TRH • BTEXN • PAH • Metals • Phenols • Cyanide • Asbestos 1	The HSLs presented in the ASC NEPM (2013) and CRC CARE (2011) for petroleum hydrocarbons in soil were developed to be protective of human health by determining the reasonable maximum concentration from on-site sources for a range of situations commonly encountered on contaminated sites. The HILs are scientifically based, generic assessment criteria designed to be used in the first stage of an assessment of potential risks to human health from chronic exposure to contaminants. They are intentionally conservative and are based on a reasonable worst-case scenario for four generic land use settings: • HIL A - Residential with garden/ accessible soil • HIL B - Residential with minimal soil access (e.g. paved yards, high rise buildings) • HIL C - Public open space such as parks and playgrounds • HIL D - Commercial/industrial (e.g. factories, industrial sites)
CRC CARE (2011a)[2]: *Technical Report No.10 - Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater*. September 2011. (Friebel, E. and Nadebaum, P., 2011): • HSL D (dermal contact)	• TRH • BTEXN	
CRC CARE (2011b)[3]: • Intrusive Maintenance Worker (dermal contact) • Intrusive Maintenance worker HSL		
US EPA Regional Screening Level (RSLs): • Industrial Soils (revised biannually)	• CoPC without HILs or HSLs	Where no guideline value is available from Australian guidelines, values will be adopted from the US EPA RSLs. The US EPA RSLs present values for residential soil and industrial soils.
PFAS NEMP 2.0: • Commercial / Industrial Soils.	• PFAS	The PFAS NEMP presents guidelines values to protect human health and ecological receptors from PFAS impacts.

For the assessment of asbestos, an initial screening level of absence/presence of asbestos fibres in soils was adopted. In the event that fragments of ACM are encountered, or asbestos fibres detected in samples, further assessment of the nature and extent of ACM at the project area will be made before remediation and/or management options are considered.

[1] As based on NEPM guidelines for managing Asbestos in Soil

[2] Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (CRC CARE) *Technical Report No.10 - Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater*. September 2011. (Friebel, E. and Nadebaum, P., 2011)

[3] CRC CARE *Technical Report No. 10, Part 2 – Intrusive Maintenance Worker (Shallow Trench) Health Screening Levels*. September 2011

ASC NEPM (2013) and CRC CARE (2011a and 2011b) include limited criteria for SVOCs (other than pesticides and TRH) and VOCs (other than BTEX and volatile TRH). Where no criteria are available, the laboratory limit of reporting (LOR) was adopted as a screening concentration, above which, further assessment may be required.

7.1.2 Ecological

As the project area is to be developed into a road with minimal landscaped areas on verges ecological criteria for soil has not been adopted.

7.1.3 Management limits

Petroleum hydrocarbon management limits are screening levels from the ASC NEPM (2013) that are applicable following evaluation of human and ecological health. They are intended to assess other impacts that are not considered in the application of HSLs, such as explosive or fire hazards, impacts to subsurface infrastructure and the formation of light non-aqueous phase liquids (LNAPL).

They are applicable for operating sites where significant sub-surface leakage of petroleum compounds may have occurred, and when decommissioning industrial and commercial facilities. The management limits may have less relevance at operating industrial sites which have no or limited sensitive receptors in the area of potential impact. Exceedance of management limits does not imply that remediation is necessary, though may trigger further site-specific assessment to enable any identified risks to be addressed.

Soil and sediment analytical results for petroleum hydrocarbons will be screened against the management limits for commercial and industrial land use if petroleum-type contamination is detected at concentrations greater than the LOR, and if the criteria protective of Human Health are not exceeded.

7.1.4 Waste

The soil results were compared to the threshold criteria (**Table 16**) in the NSW EPA (2014) Waste Classification Guidelines: Part 1 Classifying Waste and the NSW EPA (2018) addendum for PFAS.

Table 16 Waste classification criteria

Acronym	Waste classification criteria
CT1	Contaminant threshold for general solid waste
CT2	Contaminant threshold for restricted solid waste
SCC1	Specific contaminant concentration threshold for general solid waste (with TCLP results)
SCC2	Specific contaminant concentration threshold for restricted solid waste (with TCLP results)
TCLP1	TCLP threshold value for general solid waste
TCLP2	TCLP threshold value for restricted solid waste

The soil results were also compared against the ‘absolute maximum concentration’ (Column 3) in NSW EPA (2014) *The excavated natural material order 2014.* As a full assessment against the order was not undertaken (appropriate sampling densities were not collected) results were not compared to the ‘maximum average concentration for characterisation’.

7.2 Groundwater

The adopted Tier 1 groundwater assessment criteria is outlined in Table 17.

Table 17 Groundwater assessment criteria

Guideline	CoPC	Rationale
Human Health – Vapour Inhalation		
ASC NEPM (2013) (groundwater only)	• TRH • BTEXN	HSLs are provided in the ASC NEPM to assess the risk for vapour inhalation arising from petroleum hydrocarbon sources in groundwater. The HSLs are based on the same land use scenarios as for soil HSLs. The HSL D – Clay – 2 to <4m (commercial/industrial) will be adopted based on anticipated groundwater conditions in the project area.
Human Health – Incidental Ingestion and Dermal Contact		
National Health and Medical Research Council (2008). *Australian Drinking Water Guidelines* (ADWG, 2021)*.	• TRH • BTEXN • PAH • Phenols • Pesticides • VOC/ SVOC • Metals	In accordance with the approach recommended by National Health and Medical Research Council (NHMRC) (2008) *Guidelines for Managing Risk in Recreational Waters*, the ADWG (2021) were increased by a factor of 10 in order to produce suitable recreational criteria. It is considered that recreational criteria are suitable for assessing the risk to intrusive maintenance workers during construction works where workers may come in contact with groundwater impacts.
HEPA (2020) *PFAS National Environmental Management Plan (NEMP 2.0)*	• PFAS	The values presented in the NEMP (2020) are from the Department of Health (2017), which published final health-based guidance values for PFAS for use in site investigations in Australia. The DoH utilised the Tolerable Daily Intake for PFOS and PFOA from Food Standards Australia New Zealand (2017) and utilised the methodology described in NHMRC (2008) (application of 10x drinking water concentration) to determine appropriate recreational criteria for each compound.
Ecological criteria		
Australian and New Zealand Governments and Australian state and territory governments (ANZG), 2018. *Australian and New Zealand Guidelines for Fresh and Marine Water Quality.*	• Metals • Ammonia • VOC/ SVOC	As the nearest water body Wyong River is a slightly to moderately disturbed estuary, the freshwater and marine species 95% protection guideline values have been adopted for screening purposes. The 99% values have been adopted for bioaccumulating chemicals.
HEPA (2020) PFAS National Environmental Management Plan (NEMP 2.0)	• PFAS	Australian and New Zealand Guidelines for Fresh and Marine Water Quality -technical draft default guideline values for PFOS and PFOA. The guidelines advise that the 99% level of protection be used for slightly to moderately disturbed systems. This approach is generally adopted for chemicals that bioaccumulate and biomagnify in wildlife. Noting that the limit of reporting (LOR) is greater than the 99% value, the LOR has been adopted as the screening value.

Guideline	CoPC	Rationale
		As the nearest water body Wyong River is an estuary freshwater and marine species the 99% and 95% protection guideline values have been adopted for screening purposes. It is noted that the values are the same for fresh and marine water.

7.3 Soil vapour

The adopted Tier 1 soil vapour assessment criteria is outlined in Table 18.

Table 18 Soil vapour assessment criteria

Guideline	CoPC	Rationale
Health Screening Levels (HSL), Amended ASC NEPM (NEPC, 2013)	TRH BTEXN	The NEPM presents health screening levels (HSLs) for petroleum compounds which have been derived through consideration of risks to human health, with the main focus being on the vapour exposure pathway. The HSLs have been calculated using parameters that generally correspond to data available and as such aim to provide levels that are realistic rather than overly conservative. Full detail on their derivation and their application is provided in Cooperative Research Centre for Contamination Assessment and Remediation of the Environment (CRC CARE) Technical Report No.10 - Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater (September 2011, Friebel, E. and Nadebaum, P). The project area is a highway and associate arterial Roads, therefore the applicable land use selected is commercial industrial (D). The adjoining land uses are commercial, with low density residential. The purpose of this assessment is to consider risks within the road upgrade footprint, therefore offsite residential has been excluded. The infrastructure zoning of the road has been used to derive the applicable land use of Commercial Industrial (D).
Intrusive Maintenance Worker (Shallow Trench) Health Screening Levels, CRC CARE Technical Report No. 10, Part 2	TRH BTEXN	Maintenance workers involved in subsurface works may be exposed to contamination inside trenches. As such HSLs have been derived for utility workers working in shallow trenches (maximum trench depth of 1 m). **HSLs for intrusive maintenance workers are non-limiting (NL) for all compounds with the exception of benzene, naphthalene and TRH F2 fraction** for soil vapour. Criteria for assessing data to be selected following installation of soil vapour wells confirming depth profile and soil type.

7.4 Aesthetic considerations

In accordance with the ASC NEPM (2013), the following are the type of findings that would trigger the requirement for assessment of aesthetic considerations where further assessment hasn't already been triggered by an exceedance of an investigation or screening criteria:

- highly odorous soil or groundwater
- hydrocarbon sheens on groundwater
- discoloured soil or chemical deposits
- large monolithic deposits of otherwise low risk material
- soils containing residue from animal or abattoir waste burial.

The above aesthetic conditions were considered in the assessment

8.0 Assessment of QA/QC

8.1 Deviations from the SAQP

The following deviations in methodology from the SAQPs occurred during the investigations:

- Soil investigation:
  - Locations R-CPT-02 (BH08), R-TP05 (TP47), R-BH19 (BH20), ACM-TP07 (TP53) locations were not sampled, or the collected samples were not scheduled for analysis due to oversight.
  - The boreholes needed to be relocated due to underground service identified during hand-auger drilling or were re-drilled due contamination samples not being collected were labelled with an additional letter starting from the letter “A” (i.e. A-BH03A, R-BH10B)
  - The following additional borehole locations were sampled for environmental analysis which were not requested on the SAQP (AECOM, 2023):
    - R-BH35A – replacement location of the R-CPT02 (BH08)
    - BH05 – additional samples collected due to the data quality issues in the samples collected from ACM-TP18 (TP71)
    - A-TP05 – additional samples collected to have a better coverage in the targeted AEC
    - R-BH13 – additional samples collected to have a better coverage in the targeted AEC
    - ACM-BH05A – additional samples collected due to the data quality issues in the samples collected at the same location
    - R-BH13 – additional samples collected to have a better coverage in the targeted AEC
    - R-BH10A – additional samples collected to have a better coverage in the targeted AEC
    - ACM-TP08 – replacement location of the ACM-TP07(TP53)
    - BH06 – replacement location due to relocation of A-BH02 to opposite side of the road.
- Groundwater investigation:
  - The well BH39/GW39 was found dry all the time during the siteworks.
  - Groundwater samples collected from an existing well (PB-BH10) in the vicinity of the proposed well to be sampled BH39/GW39, which found dry.
  - An additional well was installed at A-BH17, at downgradient location AEC16, and extra groundwater samples collected.
  - An additional groundwater sample was collected from a well installed for the geotechnical investigation work, R-BH23, due to contingency.
  - Two existing wells installed were sampled (BH04 and BH10) instead of R-BH08.
- Soil Vapour Investigation:
  - Due to contingency two soil vapour pins were installed at different depths at SV1. One pin was installed at 3.0 m bgs (SV1D) and one pin installed at 1.5 m bgs (SV1S).
  - The soil vapour wells SV1D, SV1S, SV2, SV3, and SV4 were all found flooded during the first sampling attempt on 11 April 2024. Heavy rain likely caused the accumulation of water in the soil vapour wells due to a higher groundwater level or perched groundwater.
  - The soil vapour wells SV1D, SV1S and SV3 were found flooded during the second sampling attempt. The soil vapour samples were only collected from SV-2 and SV-4 on 21 April 2024.

All proposed locations and sampled locations are presented in **Figure 2.A** to **2.E** in **Appendix A**.

8.2 Data validation

The detailed data validation report is presented in **Appendix E**. The key findings of the data validation were:

- When using the PFAS soil data quantitatively it should be taken consideration PFAS detections have not been assessed against field blank data to assess for false positives/ overreporting of PFAS concentrations. As all PFAS results were less than the adopted assessment criteria there is no impact on the outcome of the assessment.
- The potential for under reporting of concentrations must be considered when using the data quantitatively and assessing against the relevant assessment criteria due to some batches received at temperatures above the recommended storage temperature of <6°C.
- Some samples were extracted and analysed outside recommended holding times. There is the potential for these analytes to have degraded over time and not be truly representative of field conditions. This potential under reporting should be taken into consideration when interpreting data for these analytes.

Based on the overall assessment of field and laboratory QA/QC data, the reported analytical results are considered, by achievement of the DQIs, to be reliable and representative of concentrations of the CoPC analysed at the locations sampled for the purposes of this investigation.

9.0 Results

9.1 Soil

9.1.1 Field observations

The lithologies encountered generally comprised fill material (typically sandy clay or clayey sand) followed by alluvial soil, residual soil, and bedrock (claystone). Observations of potential contamination recorded on soil logs included:

- ACM-BH09 – a slight petroleum odour at the interface of fill and natural soils at 1.8 mbgl
- ACM-BH12 – a strong hydrocarbon odour at 0.5 mbgl (borehole terminated at 0.8 m due to services) (corresponding PID VOC reading of 4.6 ppm)
- ACM-BH12A – a strong petroleum odour at 1.0 mbgl (corresponding PID VOC reading of 13.1 ppm)
- BH04A – a weak hydrocarbon odour at 0.5 mbgl (corresponding PID VOC reading of 2 ppm)
- BH40 – a weak petroleum odour at 0.1 to 0.5 mbgl (corresponding PID VOC reading of 3.9 ppm)
- R-BH26A – a slight aromatic odour at 0.1 to 0.2 mbgl (corresponding PID VOC reading of 4.1 ppm)
- R-BH27A – a strong petroleum odour at 0.4 to 0.8 mbgl (corresponding PID VOC reading of 16.1 ppm)
- ACM-BH09 – a slight petroleum odour at the interface of fill and natural soils 1.8 mbgl (corresponding PID VOC reading of 18.4 ppm)
- ACM-TP05 – black coal waste logged from 0.5 to 1.15 mbgl
- R-TP13 – a strong hydrocarbon odour from 1.1 to 1.4 mbgl in natural sandy clay (corresponding PID VOC reading of 2.2 ppm)

Fill containing demolition type waste was encountered in:

- ACM-TP17 at 0.7 to 1.6 m bgl (bricks)
- R-TP03 at 0 to 0.6 mbgl (brick, plastic, scrap metal, and paper)
- R-TP11 at 0.1 to 1.4 mbgl (ceramic and concrete)
- R-TP05 at 0.1 to 1.3 mbgl (trace plastic and brick)

Borelogs with full descriptions of encountered lithologies are included in **Appendix F**. A partially submerged and broken ACM conduit and stockpiles of spoil were observed in the vicinity of R-BH19 in the rail corridor (see photographs in **Appendix G**).

9.1.2 VOC field screening

PID field VOC readings ranged from <1 ppm to 65.4 ppm for the soil samples collected from the boreholes. Elevated VOC readings (>50 ppm) were recorded in the following samples:

- ACM-TP15 at 0.5 - 1.0 mbgl at 51.4 ppm (no odour noted)
- BH26 at 0.1 - 0.2 mbgl at 65.4 ppm (no odour noted)

PID VOC readings are included on borelogs in **Appendix F**.

9.1.3 Soil analytical results

Soil analytical results are presented and screened against the adopted assessment criteria in the following tables **Appendix B**:

- Table B2 – heavy metals
- Table B3 – TRH and BTEXN
- Table B4 – PAHs and phenols

- Table B5– PCBs, OCPs and OPPs
- Table B6 – PFAS
- Table B7 – asbestos
- Table B8– VOCs
- Table B9– cyanide, nutrients and physio-chemical parameters

All soil analytical results were less than the adopted HILs or HSLs except for ACM-TP05_0.1-0.2 where lead (4770 mg/kg) exceeded HIL D criteria (1500 mg/kg). ACM-TP05 is located at AEC17 (adjacent to Pacific Highway and railway).

Asbestos was detected in on fragment of asbestos (ACM-2) sampled from AEC 20. Asbestos was not detected in any soil sample analysed.

Soil analytical results and TCLP are compared to the NSW EPA (2014) waste classification criteria in **Table B10** and **Table B11** respectively in **Appendix B.** All results were than either less than CT1 or SCC1/TCLP1 (general solid waste) with the exception of samples listed in **Table 19**.

Soil analytical results were compared to the 'absolute maximum concentration' (Column 3) in the Excavated natural material order 2014 (ENM order). The criteria were exceeded for arsenic, cadmium, copper, lead, nickel, zinc, TPH C10-C36, benzo(a)pyrene and foreign materials. The summary of exceedances are in **Table 20**. The results have not been compared to the average ENM criteria as there are insufficient sampling densities against. Laboratory reports for all soil analytical results are included in **Appendix H**.

Table 19 Summary of results exceeding general solid waste classification criteria

AEC	Sample	Analyte	Results		Criteria exceeded	Classification
			Soil (mg/kg)	TCLP (mg/L)		
AEC1	BH02_1.3-1.4	Benzo(a)pyrene	6.3	-	CT2	HW*
AEC2,3,4	BH04_0.2-0.3	Benzo(a)pyrene	4	-	CT2	HW*
	BH04A_0.4-0.5	Benzo(a)pyrene	16.2	<0.4	SSC1	RSW
AEC7	ACM-BH05_0.1-0.2	Lead	223	-	CT1	RSW
		Benzo(a)pyrene	11.1	<0.5	SCC1	
		Sum of PAHs	224	n/a	SCC1	
AEC11	BH26_1.1-1.2	Benzo(a)pyrene	4.1	-	CT2	HW*
	BH26B_0.4-0.5	Benzo(a)pyrene	1.3	-	CT1	RSW*
AEC17	ACM-TP03_0.5-0.6	Lead	84-104	-	CT1	RSW*
	ACM-TP05_0.1-0.2	Arsenic	200	-	CT1	RSW
		Lead	4770	-	SCC1	
AEC24	A-BH16B_0.5-0.6	Lead	112	-	CT1	RSW*

Note: *No TCLP results for the sample (further sampling and analysis including statistical analysis may reduce classification)

Table 20 ENM order exceedances

Analyte	Criteria - Absolute Maximum Concentration (mg/kg)	No. of samples exceeding criteria	Maximum concentration detected (mg/kg)
Arsenic	40	4	200
Cadmium	1	2	3

Analyte	Criteria - Absolute Maximum Concentration (mg/kg)	No. of samples exceeding criteria	Maximum concentration detected (mg/kg)
Copper	200	1	355
Lead	100	13	4770
Nickel	60	4	104
Zinc	300	12	2000
TPH C10-C36	500	3	2100
Benzo(a)pyrene	1	22	16.2
Sum of PAHs	40	6	297
Foreign material analysis	0.1%	5	0.78

9.2 Coal tar analysis

Coal tar analysis results of asphalt samples are summarised in **Table B12** in **Appendix B.** Coal tar was reported as absent in all samples. Laboratory reports are included in **Appendix H**.

9.3 Groundwater

9.3.1 Gauging results

Groundwater gauging results for each groundwater monitoring is presented in **Table B13** in **Appendix B**. Standing water levels (SWL) ranged between 0.310 m bTOC (GW35) and 10.020 m bTOC (R-BH23) and 0.427 m AHD (R-CPT08) and 8.482 m AHD (GW30). Monitoring well GW39 was dry. Non aqueous phase liquid (NAPL) was not measured in any of the groundwater monitoring wells gauged.

Inferred groundwater contours are provided on **Figure 3A** to **Figure 3B** in **Appendix A**. The inferred groundwater flow in the southern section (south of Wyong River) was generally to the northeast towards the Wyong River. On the northern side of the Wyong River the inferred groundwater flow was towards the south of Wyong Station and the north and northeast within the project area north of Wyong Station.

9.3.2 Groundwater quality parameters and observations

Stabilised groundwater quality parameters and observations for each monitoring well sampled is presented in **Table B14** in **Appendix B**. The observations of groundwater quality during sampling were:

- no sheens in purged groundwater from any of the monitoring wells
- low or no turbidity in purged groundwater from monitoring wells except for GW01, GW11, GW29, GW29, GW30, R-BH10, R-BH23 which had moderate turbidity and GW22 which had high turbidity
- groundwater was mostly observed to be clear or yellow with the exception of red-brown in GW22 and GW29, pale brown in R-BH23 and GW11
- a sulfur odour was observed in eight of the 18 monitoring wells sampled.

The summary of the range of groundwater quality parameters is in **Table 21**. Groundwater parameters indicated groundwater ranging conditions ranging from:

- fresh to brackish
- slightly to moderately acidic
- slightly reducing to strongly oxidising groundwater.

Table 21 Summary of groundwater quality parameter field results

Parameter	Minimum	Maximum
Dissolved oxygen (mg/L)	0.01 (GW28)	1.86 (R-BH23
Electrical conductivity (uS/cm)	183 (GW07)	18652 (R-CPT06)
pH	4.53 (GW26)	6.78 (GW30)
Temperature	20.1 (R-CPT08)	25.9 (GW11)
Redox (Eh)	-11.8 (R-CPT06)	403.4 (BH04)

9.3.3 Groundwater analytical results

Groundwater results are presented and screened against the human health based assessment criteria in **Table B15a** in **Appendix B**. All results were less than the adopted human health based assessment criteria with the exception of pH in monitoring well A-BH03 (pH 5.83) which was less than the adopted human health direct contact criteria of pH 6.5.

It is noted that the laboratory LOR for PAH compound benzo(a)pyrene and VHCs vinyl chloride and bromoethane were higher than the adopted human health direct contact criteria. With the exception of a detection of phenanthrene at 1.3 µg/L (LOR 1 µg/L) no other PAH compounds were detected and no VHC was detected above the LOR.

Groundwater results are presented and screened against the ecological based assessment criteria in **Table B15b** in **Appendix B**. Results exceeding the adopted ecological screening criteria were:

- heavy metals cadmium, chromium, copper, nickel and zinc exceeded the ANZG (2018) 95% protection levels for marine and/or freshwater
- PFOS exceeded the HEPA (2020) 99% protection levels for marine and freshwater.

The exceedances of ecological screening criteria Table 22 and shown on **Figure F4A to 4C** in **Appendix A**.

Table 22 Summary of groundwater results exceeding ecological screening criteria

Analyte	Units	Screening criteria - ANZG 95% level of species protection		Concentration Range		Locations with exceedances
		Freshwater	Marine	Min.	Max.	
Cadmium	mg/L	0.0002	0.0055	<0.0001	0.0003	A-BH06 (GW42), BH10 and BH29
Chromium	mg/L	0.001	0.0044	<0.0001	0.002	A-BH02, R-BH37 (GW11) and A-BH03
Copper	mg/L	0.0014	0.0013	<0.0001	0.089	BH01 (GW01), A-BH06 (GW22), BH10, BH26 (GW26), BH29 (GW29), BH35 (GW35), BH42 (GW42) and R-BH23
Nickel	mg/L	0.011	0.07	0.001	0.127	A-BH06 (GW22), A-BH17, BH35 (GW35), R-BH37 (GW11), BH28 (GW28) and BH29 (GW29
Zinc	mg/L	0.008	0.008	<0.001	0.176	BH01 (GW01), BH42 (GW42), A-BH06 (GW22), BH35 (GW35), BH10, BH26 (GW26), BH28 (GW28) and BH29 (GW29)

Analyte	Units	Screening criteria - ANZG 95% level of species protection		Concentration Range		Locations with exceedances
		Freshwater	Marine	Min.	Max.	
PFOS	µg/L	0.00023 (99%)*		<0.01	0.02	BH30 (GW30) and BH26 (GW26)

Notes:* HEPA (2020) 99% level of species protection for marine and freshwater.

9.4 Soil vapour

9.4.1 Leak test

Soil vapour monitoring bores SV1(S/D) and SV3 were not sampled due to water in the lines from groundwater inundating the screened interval. SV2 and SV4 passed leak detection tests. Leak test records for SV2 and SV4 are included in **Appendix I**.

9.4.2 Field screening

The soil vapour field readings for SV2 and SV4 are summarised in **Table 23** and field sheets are included in **Appendix I**.

Table 23 Soil vapour field results

Well	VOCs	Stabilised			Post Sampling			
		O_2	CO_2	CH_4	O_2	CO_2	CH_4	VOCs
SV2	2.2 ppm	0.6%	12.3%	37.2%	0.9%	11.5%	34.6%	1.4 ppm
SV4	6.8 ppm	0.4%	17.8%	1.3%	0.0%	17.9%	1.4%	6 ppm

9.4.3 Soil vapour analytical results

All soil vapour analytical results are presented and screened against the assessment criteria in **Table B16** in **Appendix B**. All results were less adopted assessment criteria. Laboratory reports are included in **Appendix H**.

10.0 Discussion

10.1 Nature and extent of contamination

This investigation identified one lead hotspot (>250% of criteria) in shallow soil within the railway corridor south of Wyong Station (ACM-TP05_0.1-0.2). All other soil samples met the adopted human health based assessment criteria in this investigation.

The SMEC (2016) investigation detected concentrations of carcinogenic PAHs (benzo(a)pyrene TEQ) exceeding the adopted human health based assessment criteria in soil directly beneath the road pavement in the Pacific Highway adjacent to the Shell service station and Aldi in the northern part of the project area (BHE20 and BHE22). The PB (2014) investigation identified coal tar pavements in the same area. Boreholes drilled as part of this investigation surrounding the BHE20 and BHE22 (BH26 to BH28) reported concentrations of benzo(a)pyrene TEQ below the adopted assessment criteria. The results suggest the contamination is not wide spread and likely sourced from road pavements.

The estimated lateral extent of the lead hotspot and carcinogenic PAHs impacts to be delineated during construction is shown on **Figure FB** in **Appendix A**. The depth of impact for the lead hotspot is potentially up to 1 mbgl (extent of fill) and 0.2 mbgl for the carcinogenic PAHs impacted area. It I noted that delineation of the lead hotspot to the east is restricted by the active rail corridor and remedial works would be restricted the construction footprint.

Previous investigations identified potential coal tar asphalts (based on visual and olfactory observations) in the following sections of the Pacific Highway within the project area:

- north of Anzac Avenue
- about 50 m south of the Church Street intersection
- between Johnson Road and Bluegum Drive.

Coal tar testing of asphalt samples completed across the project area did not identify the presence of coal tar in the samples tested in this investigation.

Based on the investigation results completed to date, localised soil remediation or management would be required of the lead hotspot within the rail corridor and area impacted with carcinogenic PAHs at the Pacific Highway just south of North Road intersection. The impacted soils could be excavated and disposed off-site to a licensed waste facility, with resultant excavations validated. Where the impacted soils are to be excavated as part of bulk excavation and disposed off-site to an appropriately licensed waste facility, a remediation action plan (RAP) would not be required. Where the soils surrounding the impacted area are proposed to be re-used within the project area, a RAP would and validation report would be required to demonstrate unsuitable soils have been delineated and removed.

Asbestos fragments were identified on the soil surface in South Tacoma Road. Asbestos was not detected in the soil samples analysed from across the project area. Based on the presence of underground service conduits and service pits made of ACM within the project area (known locations shown on **Figure 2B** to **2E** in **Appendix A**) and some areas of fill with inclusions of demolition wastes, it is likely asbestos in soil would be encountered during future excavation works in parts of the project area. Areas of fill containing inclusions of demolition materials (i.e. brick and ceramic fragments) were located in the project area at:

- near intersection of Bluegum Close and McPherson Road (ACM-TP17)
- the reserve between the River Road and Pacific Highway (R-TP03)
- the road reserve on the northern side of Cutler Drive (R-TP11)
- the west side of the Howarth Street bridge (R-TP05)

Groundwater was encountered at the shallowest depth of 0.3 mbgl, but was typically encountered at depths of between 1 to 3 mbgl. Shallow groundwater in low lying areas of project area could potentially be encountered during earthworks. All groundwater results were less than the adopted human-health based assessment criteria. There were exceedances of the ecological based criteria for heavy metals (cadmium, chromium, copper, nickel and zinc) and PFOS. The heavy metal exceedances were spread

across the project area. The PFOS exceedances were the closest monitoring wells hydraulically down-gradient of the fire station. Groundwater extracted during dewatering activities during construction would require testing and assessment against discharge criteria or be disposed of at an appropriately liquid waste facility.

Soil vapour results were less than the adopted assessment criteria in the two wells sampled. It is noted that SV1 and SV4 could not be sampled due to groundwater being above the depth of the probe. There was no TRH or VOC contamination identified in the soil or groundwater in the boreholes and monitoring at these two locations. Based on this the risk of vapour intrusion within the project area is low. It is noted there are two operational service stations present so there is still an ongoing risk for future spills that could potentially contaminant the adjacent project area.

10.2 Waste classification

Based on the results of the investigation the majority of the soils sampled within the project area are likely to be classified as general solid waste (GSW) with some areas of special waste (asbestos), restricted solid waste (RSW) and potentially hazardous waste (HW) in accordance with the NSW EPA (2014) Waste Classification Guidelines: Part 1 Classifying Waste. Soil classified as RSW was identified at:

- BH04A located at southern most end of South Tacoma Road
- ACM-BH05 located within the railway carpark on the east side of Wyong Station
- ACM-TP05 located within the railway corridor south of Wyong Station

Soil classified as RSW or HW that could potentially be reduced to GSW within further sampling and analysis including TCLP and statistical analysis were identified at:

- BH02 located at southern most end of South Tacoma Road/Pacific Highway
- BH26 located at east side of Howarth Street Bridge
- ACM-TP03 located within the rail corridor south of Wyong Station
- A-BH16A filled area located adjacent to the Pacific Highway at northern end of the project area.

Areas of special waste (asbestos) potentially are present in the following locations:

- within the rail corridor particularly shallow soils, fill, stockpiles
- subsurface ACM conduits and pits and soils surrounding conduits
- fill within the project area, particularly where there is evidence of demolition type waste observed within the fill.

Based on the comparison of the soil results to the ENM order, fill and natural shallow soils within the project area would not meet the ENM order requirements based on the results.

It is noted that PASS occur within alluvial soils on the south side of the Wyong River, sediments within the Wyong River and alluvial soils on the northern side, as reported in the geotechnical investigation report (AECOM, 2024a) documented in the ASSMP (AECOM, 2024b). PASS that is excavated and requires off-site disposal will need to be in accordance with the NSW EPA (2014) Waste Classification Guidelines: Part 4 Acid Sulfate Soils. PASS does not meet the ENM order requirements, but can be reused within the project area following treatment in accordance with the ASSMP.

Excavated asphalt free from coal tar and asbestos may be either reused under the reclaimed asphalt pavement exemption 2014 under the Protection of the Environment and Operations (POEO) (Waste) Regulation 2014. Coal tar impacted asphalt are to be disposed as GSW (non-putrescible) to an appropriately licensed waste facility.

10.3 Updated conceptual site model

The preliminary CSM developed as part of the SAQPs (AECOM 2023a/b), has been revised based on the DSI results, including revising the risk ranking. The updated CSM is in Table 24 below and updated moderate risk AECs are shown on **Figure F5A** to **F5C** in **Appendix A.**

Table 24 Updated CSM

AEC	Potential contamination sources	Typical Associated CoPC	Potentially complete pathway	Revised AEC risk ranking
AEC 1: Ampol Service Station,	Underground Petroleum Storage	TRH, BTEXN, PAHs, Lead, Phenols	Not currently but is still an active service station (potential for future leaks)	Low-Moderate
AEC2, 3 & 4: Various industrial warehouses and mechanical workshops adjacent proposed project area	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, Solvents, ACM	No	Low
AEC 5: Auction house. Directly in footprint of project area	Storage of motor vehicles	TRH, BTEXN, PAHs, Metals, Phenols, Solvents, ACM	No	Low
AEC6: Electrical sub-station adjacent to the project area	Electrical transformers	Metals, Polychlorinated Biphenyls (PCB)	No	Low
AEC7: Wyong Train station, not directly impacted by development	Unregulated Fill material	ACM, TRH, BTEXN, PAH, Phenols, Pesticides, PCB, Metals	No	Low
AEC8: Recreational Building	Building materials	ACM, Lead (Paint)	No	Low
AEC9: Empty building lot in footprint of development. Building demolished 2020	Building materials	ACM, Lead (Paint)	No	Low
AEC10: Water Pumping station	Water processing	Aluminium, Arsenic, Cadmium, Chromium, Cobalt, Lead, Nickel, Lime, Zinc and Fluoride	No	Low
AEC11: Shell service station directly adjacent development. Associated Carwash. Nearby Fire Station.	Underground petroleum storage Historical use/storage of Aqueous Film Forming Foam (AFFF)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, PFAS, asbestos	Not currently but still an active service station (potential for future leaks)	Low-Moderate

AEC	Potential contamination sources	Typical Associated CoPC	Potentially complete pathway	Revised AEC risk ranking
AEC12: Car Repairs / Workshop	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, Solvents, resin, asbestos	No	Low
AEC13: RailCorp holding facility	Former odours identified by PB (2014) in testpit T051 (0.5-1.0 mbgl)	TRH, BTEXN, PAHs, Phenols, Metals, Nitrates and Ammonia	No	Low
AEC14: Used car dealership	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, Chlorinated Hydrocarbons (CHC), Ammonia, PFAS and ACM	No	Low
AEC15: Potential uncontrolled fill on river banks	Potential uncontrolled fill on river banks	TRH, BTEXN, PAH, Phenols, Pesticides, PCB, Metals and ACM	No	Low
AEC16: Former Service Station	Former Service Station (now vacant land) ACM previously identified on surface	TRH, BTEXN, PAHs, Lead, Phenols and ACM	No	Low
AEC17: Area adjacent to Pacific Highway and railway	Unregulated Fill material	ACM, TRH, BTEXN, PAH, Phenols, OC, OP, PCB and Metals	Yes	Moderate
AEC18: Former Dry Cleaners / adjacent former Sheet Metal Workers / former Lubricating Oils	Former Dry Cleaners / former Lubricating Oils / adjacent former Sheet Metal Workers	Volatile Organic Compounds (VOCs), TRH, PAHs, Phenols, Metals and ACM.	No	Low
AEC19: Former Motor Painters and Panel Beaters	Former Service Station	TRH, BTEXN, PAHs, Metals, Phenols, CHCs and ACM	No	Low
AEC20a to AEC20g:Potential ACM pipe	Seven potential ACM pipe locations north of Wyong River requiring removal during construction	ACM	No	Moderate
AEC21: Potential former UPSS (ALDI Site)	Mechanical workshop Potential for Underground Storage Tanks (USTs)	TRH, BTEXN, PAHs, Metals, Phenols, CHCs, Oil and Grease, Solvents, resin, asbestos	No	Low

AEC	Potential contamination sources	Typical Associated CoPC	Potentially complete pathway	Revised AEC risk ranking
AEC22: Former “Fibrous Plaster Manufacturers” and potential former Service Station	Former Fibrous Plaster Manufacturers and potential former Service Station	ACM, TRH, BTEXN, PAH, Metals	No	Low
AEC23: Current Service Station	Current 7-Eleven Service Station	TRH, BTEXN, PAHs, Lead and Phenols	No	Low
AEC24: Fill - Adjacent Pacific Highway Northern End of the project area	Unregulated Fill material	TRH, BTEXN, PAH, Phenols, OC, OP, PCB and Metals	No	Low
AEC25: Coal Tar Pavements	PB (2014) - Areas where coal tar was noted on the pavement core engineering logs include: C058 and C070 (PB, 2014)); and 2037-55, 2037-56, 2760-S3A, 2760-S4B, 2760-N2B, 2760-N2A and 2760-N3A (TfNSW)	PAH, Phenols and Benzo(a)Pyrene (BaP).	Yes	Low- Moderate
AEC26: Potential ACM Pipes	Potential ACM pipes requiring removal during construction located south of the Wyong River	ACM	Yes	Moderate

Notes: *Revised risk ranking from preliminary CSM

11.0 Conclusions

Based on the review of previous investigation data and new soil data obtained during this investigation, soil impacts have found to be limited in extent at three shallow soil sample locations. There was one hotspot of lead (Pb) in the rail corridor and two locations where carcinogenic PAHs exceeded the adopted human health based assessment criteria in the Pacific Highway between Anzac Avenue and North Road.

ACM was not observed the soil subsurface in test pits or boreholes and was not detected in soil samples analysed. There were isolated fragments of ACM observed on the ground surface, with one near the intersection of south Tacoma Road and the Pacific Highway and within the rail corridor. Based on the presence of underground service conduits and service pits made of ACM within the project area and some areas of fill with inclusions of demolition wastes, it is likely asbestos in soil would be encountered during future excavation works in parts of the project area.

Groundwater was encountered at depths ranging between 0.3 mbgl and 10 mbgl. No sheen or NAPL were observed in the groundwater wells sampled. All groundwater and soil vapour results were less than the adopted human health based assessment criteria. Groundwater results exceeded the adopted ecological screening criteria for heavy metals (cadmium, chromium, copper, nickel and zinc) across the project are and PFOS in the wells closest to the fire station. Groundwater extracted during dewatering activities during construction would require testing and assessment against discharge criteria or be disposed of at an appropriately liquid waste facility.

The CSM has been revised based on the results of investigation. All AECs are considered low risk with the exception of the following:

- AEC 1, AEC 11 and AEC23: Operational service stations (low to moderate risk) due to ongoing use (potential for future spills/leaks)
- AEC 17: unregulated fill adjacent to the Pacific Highway and rail corridor which is moderate risk
- AEC 25: coal tar pavements (low to moderate risk) due to potential presence
- AEC 20a to g and 26: ACM pipes (moderate risk)

Localised soil remediation or management would be required during construction at the lead hotspot within the rail corridor and area impacted with carcinogenic PAHs at the Pacific Highway just south of North Road intersection.

Where the impacted soils are to be excavated as part of bulk excavation and disposed off-site to an appropriately licensed waste facility, a remediation action plan (RAP) would not be required. Where the impacted soils are not proposed to be excavated within the construction footprint or re-use of soils is proposed, a RAP and validation report would be required to demonstrate unsuitable soils have been delineated and removed. An asbestos management plan (AMP) would be required to manage removal of asbestos conduits and pits as well as areas where asbestos impacted fill or surface soils are encountered. An unexpected finds protocol (UFP) should also be prepared for construction to manage potential previously unidentified contamination encountered during construction.

Based on the comparison of the soil results to the ENM order, fill and natural shallow soils within the project area would not meet the ENM order requirements based on the results. Comparison of the results to the NSW EPA (2014) *Waste Classification Guidelines – Part 1 Classifying Waste*, identified areas of RSW and HW at several locations across the project area. Further sampling and analysis including TCLP analysis may change the classification. Areas of acid sulfate soils, located mainly within and south of the Wyong River would be classified as potential acid sulfate soils and require disposal in accordance with NSW EPA (2014) *Waste Classification Guidelines – Part 4* Acid Sulfate Soils and treatment and management in accordance with the ASSMP (AECOM, 2024b).

Notes:
mg/kg = milligrams per kilogram
LOR = Limit of Reporting
< denotes result less than LOR
- denotes not analysed
TCLP - Toxicity Characteristic Leaching Procedure
ASLP - Australian Standard Leaching Procedure (deionised water)

R-BH37 / GW11	12/04/2024	2.3	0.17	407	244	6.14	25.9	-167.2	34.8	Moderate turbidity, light brown colour, sulfur odour, no sheen.
SV1-S	23/04/2024	1.4	0.05	428	257	5.79	25.5	-44.9	157.1	No turbidity, clear in colour, no odour, no sheen.

Notes
(1) TDS = Total Dissolved Solids
(2) TDS approximated as Electrical Conductivity x 0.6
(3) Redox Potential (Er) measured with a platinum electrode and a silver/silver chloride reference electrode (Er) and converted to Eh by Eh = Er + 202 mV (based on a groundwater temperature of 25.0°C)
L = Litres
ppm = parts per million
uS/cm = microsiemens per centimetre
mg/L = milligrams per litre
mV = millivolts
°C = degrees Celsius

Calibration records

WAMSCIENTIFIC
Your water and air monitoring equipment specialists

Certificate of Service and Calibration
Interface Meter
Heron H.Oil

Company Name	WAM Scientific
Office Address	26 Bungarra Crescent, Chipping Norton NSW 2170
Phone Number	+61 405 241 484
Contact Name	William Pak
Instrument	Heron H.Oil Interface Meter (60m)
Serial Number	01-8151
Client Name	Eric Serttas/Alex To/Fahim Rashid/James Looney (AECOM Australia Pty Ltd)
Project Number	60709736 Task CDRL 1100

Instrument Check			
Item	Test	Test Passed	Comments
9V Battery	Klein Tools MM300 Multimeter	✓	Battery voltage reading above 7.9V
Battery Box	Check	✓	No damage
Face and Back Plates	Check	✓	No damage
Thumb Screws	Check	✓	Rubber ends intact
Tape Hangar/Protector	Check	✓	No damage
On/Off Button	Operation	✓	Button is functional
Buzzer	Operation	✓	Intermittent tone in H_2O, solid tone in product
LED Signal Light	Operation	✓	LED light functional – green and red
Probe	Operation/Check	✓	Decontaminated, cleaned and tested
Tape	Condition/Check	✓	Decontaminated and cleaned, no damage
Connection	Check	✓	Probe and link connected correctly and tightly
PCB	Operation	✓	Unit is fully functional
Electronics Panel	Orientation	✓	Correctly aligned

Instrument Readings		
Product	Buzzer	LED Light
H_2O	Intermittent	Blinking – Red
Petroleum	Solid	Steady – Red

Declaration
WAM Scientific certifies that the above instrument was successfully tested according to manufacturer's standards and all necessary checks were conducted to ensure the instrument was fully operational prior to dispatch. The interface meter was decontaminated, cleaned and tested with a mixture of tap water and petrol, shielded from ambient light.

Certificate of Calibration

Name:_____
Company: Arcmet Scientific PTY LTD
Customer No.: 05-001203
Phone No.:_____

MGD P/N: 83219 Date: April 24 23

SN#: 041880 Software Rev. 1.13

New: ____ Repair: X

Work order#: 615785 SRA#: H 30970

Calibration conditions		Acceptable Range
Temperature	72	68-80 F
Humidity	30	<85%
Pump Vol.	1.10 L/min	.90 -1.20 l/min
Calibration point	**X = Complete**	
0%	X	Set point
2%	X	Set point
50%	X	Set point
100%	X	Set point
25 ppm (final check)	X	25 – 75 ppm
Attachment functionality	X	
Other	____	

Note: All test equipment used in manufacturing and repair is calibrated and traceable. Unless otherwise noted, the accuracy ratios are equal to or greater than 4:1.
Calibration Procedure used: MGD-2002 Helium Detector Calibration Procedure.

The 2% through 100% tests are performed with pre mixed (grade 5) helium with the remainder being nitrogen. Using a direct Siphon test method.

The 25ppm is performed as a final check as helium permeates a latex membrane.

The unit's upper reading limit is set at 100% a brief display of +100% is acceptable for a short duration (<10 sec) allowing for sensor stabilization.

Instrument Check

Item	Test	Test Passed	Comments
2 x Alkaline C-size Batteries	Klein Tools MM300 Multimeter	✓	Both batteries reading above 2.9V
Battery Saver Function	Operation	✓	Automatically turns off after 60 minutes if idle
Unit Display	Operation	✓	Screen visible, no damage
Keypad	Operation	✓	Responsive, no damage
Connection Port and Cable	Condition/Check	✓	Clean, no damage
Monitor Housing	Condition/Check	✓	No damage
Firmware	Version	✓	4.0.0
pH Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
pH millivolts for pH 7.00	Calibration	✓	pH 7.00 calibration range between 0 mV ± 50 mV
pH millivolts for pH 4.00	Calibration	✓	pH 4 mV range +165 to +180 from 7 buffer mV value
pH slope	Calibration	✓	Range between 55 to 60 mV/pH (ideal value 59 mV)
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
ORP Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
ORP Reading	Calibration	✓	Within ± 80 mV of reference Zobell Reading
Response time < 90 seconds	Calibration	✓	Responds to correct value within 90 seconds
Conductivity/Temp Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
Conductivity Cell	Calibration	✓	Conductivity cell constant 5.0 ± 1.0 in GLP file
Clean Sensor Readings	Calibration	✓	Clean sensor reads less than 3 uS/cm in dry air
Dissolved Oxygen Probe	Condition/Calibration	✓	Calibrated and conforms to manufacturer's specs
DO Cap	Condition/Calibration	✓	1.25 mil PE membrane (yellow membrane)
DO Sensor in Use	Condition	✓	Polarographic DO sensor
DO Sensor Value	Calibration	✓	(min 4.31 uA - max 8.00 uA) Avg 6.15 uA

Key Findings:

- When using the PFAS soil data quantitatively it should be taken consideration PFAS detections have not been assessed against field blank data.
- The potential for under reporting of concentrations must be considered when using the data quantitatively and assessing against the relevant assessment criteria due to some batches received at temperatures above the recommended storage temperature of <6°C.
- Some samples were extracted and analysed outside recommended holding times. There is the potential for these analytes to have degraded over time and not be truly representative of field conditions. This potential under reporting should be taken into consideration when interpreting data for these analytes.

Component	Outliers			Material impact on interpretation
	No	Yes	Comment	
Frequency of field quality assurance/quality control (QAQC)		✓	1	Yes

	Rinsate blank (DQI limit - <LOR)		✓	7	No
	Trip blank (DQI limit - <LOR)	✓			No
	Method blank (DQI limit - <LOR)	✓			No
Field intra-laboratory relative percent differences (RPDs) (DQI limit - <30%)			✓	8	No
Field inter-laboratory RPDs (DQI limit - <30%)			✓	9	No
Laboratory duplicate RPDs (DQI limit - <30%)			✓	10	No
Matrix spike (MS) % recoveries (DQI limit - 70-130%)			✓	11	No
Laboratory control spike (LCS) % recoveries (DQI limit – 70-130% or laboratory specific recovery range)		✓			No
Surrogate % recoveries (DQI limit – 70-130% or laboratory specific recovery range)			✓	12	No
Other observations		✓			No

2 of 17

Comments	
1. Frequency of field QA/QC	**Field duplicates** Field intra and inter-laboratory were collected at the required rate of at least 1 per 10 samples for PFAS and 1 per 20 samples for all contaminants of concern except for OCPs, OPPs, PCBs and cyanide where no intra or inter-laboratory duplicates were analysed. OCPs, OPPs, PCBs and cyanide were not detected above the LOR. The accuracy of the data can be assessed as acceptable based on matrix spike, surrogate and LCS samples which were reported at or above the required frequency and within control limits. It is noted that field duplicate samples QC100 (intra-laboratory sample) and QC200(inter-laboratory sample) from lab report ES2344549 were collected from the sampling location A-BH06 but from different depths. Intra-laboratory sample could not be analysed due to the QC100 could not be located by the primary laboratory. **Rinsates** Soil sampling for contamination analysis was completed on a total of 42 days and rinsate samples were collected on 26 of those days. The rinsate sampling rate of one per day of sampling was not met, however a total of 30 rinsate samples were collected as some days multiple rinsate samples were collected due to more than one sampling crew operating. The non-conformance does not impact the interpretation of the data for the purposes of the assessment. There is a sufficient amount of rinsate data to demonstrate decontamination procedures and cross contamination prevention of samples was sufficient for the purpose of the investigation. **Trip blanks and spikes** A total of 33 batches with soil samples for volatile analysis were delivered to the laboratory. A total of 16 batches had trip blank samples and 20 had trip spike samples. 13 batches out of 33 were submitted without trip blank or spikes (ES2341790, ES2342378, ES2343534, ES2344223, ES2344549, ES2344617, ES2344707, ES2409354, ES2409690, ES2409765, ES2410231, ES2411715 and ES2413882) and did not meet the requirement of one per batch. **Field blanks** PFAS field blanks were required for the 10 batches with soil samples for PFAS analysis (ES2343853, ES2343854, ES2344222 , ES2344603 , ES2406391 , ES2408158 , ES2409702 , ES2409806 , ES2411530, ES2411748). No field blanks were submitted due to an oversight. As PFAS concentrations were detected well below the adopted assessment criteria and at or just above the laboratory LOR there is no impact on the interpretation of the data. PFAS were also not detected above the laboratory LOR in rinsate samples analysed. When using the PFAS soil data quantitatively it should be taken consideration PFAS detections have not been assessed against field blank data.

3 of 17

Comments	
2. Number of tests requested/reported	Samples were analysed and reported as requested on the chain of custody (COC), except for: ALS: ES2409765 Sample 6, 20240322-R-BH16A-0.4-0.6 was not analysed for asbestos, as no bag was received. ALS: ES2411748 Sample 15 was not analysed for PFAS, as no PFAS jar was received. *ACM-TP15 location was sampled however analysis was not requested due to oversight. ALS: ES2409806 Sample 7, BH26(B)_0.4-0.5 was not analysed for asbestos as no bag was received. ALS: EB2411878 BH02_0.5-1.0, was not analysed as it was not received at the laboratory.

4 of 17

3. Sample handling/ preservation/ holding times	**Handling/preservation** Batches of samples received above the recommended temperature (≤6°C) by the laboratories are listed below, along with the lab recorded temperatures and sampling locations affected. The sample receipt notices (SRNs) noted that "ice present' or "ice bricks present" for attempt of cooling in all batches except for ES2344617 and ES2401099. The potential for under reporting of concentrations must be considered when using the data quantitatively and assessing against the relevant assessment criteria. ALS: ES2341301 (A-BH15) (10.8°C, 10.7°C, 9.3°C – ice present). ALS: ES2341790 (A-BH13, A-BH14, A-BH16B and R-BH20B) (9.7°C, 9.0°C, 7.4°C). ALS: ES2343534 (A-BH09, BH25 and R-BH34) (7.0°C, 8.2°C, 9.4°C– ice present). ALS: ES2343795 (R-BH26A and R-BH27A) (14.0°C, 18.0°C, and 17.1°C) ALS: ES2343853 (BH09) (6.0°C, 8.2°C, 10.2°C – ice bricks present) ALS: ES2343854 (A-BH03, ACM-1, ACM-2, ACM-TP09 and R-BH30) (16.4°C, 17.2°C, 15.9°C – ice bricks present) ALS: ES2344222 (ACM-BH12, ACM-TP13, ACM-TP17 and R-BH36) (6.3°C, 8.3°C, 5.8°C – ice bricks present) ALS: ES2344223 (R-BH29) (6.3°C, 8.3°C, 5.8°C – ice present) ALS: ES2344549 (A-BH06) (13.9°C, 12.0°C, 15.9°C – ice present). ALS: ES2344603 (ACM-BH12A, ACM-TP18, A-TP13 and R-BH35) (11.8°C, 11.5°C, 12.6°C – ice present). ALS: ES2344617 (ACM-BH05) (14.0°C, 18.0°C, 17.1°C). ALS: ES2410959 (BH02) (0.0°C, 0.2°C, 11.3°C – ice present). ALS: ES2344243 (R-BH29) (14.0°C, 17.0°C, 17.3°C – ice present). ALS: ES2413882 (HA56 and HA57) (17.4°C – ice present). ALS: ES2337379 (ACM-TP03, ACM-TP05 and ACM-TP08) (11.5°C, 0.5°C, -1.2°C – ice present). ALS: ES2401099 (rinsate QC300_20231105) (31.4°C, 28.9°C, 31.3°C). Eurofins: 1056637 (6.8°C) Eurofins: 1084238 (14.6°C) Eurofins: 1084489 (8.6°C) Eurofins: 1083748 (6.7°C) Eurofins: 1096015 (14.6°C) Eurofins: 1087305 (20.0°C) Eurofins: 1087307 (20.0°C)

5 of 17

Eurofins: 1084494 (8.6°C)

Eurofins: 1087307 (20.0°C)

Holding times
Samples extracted and analysed outside recommended holding times are listed below by laboratory report. There is the potential for these analytes to have degraded over time and not be truly representative of field conditions. This potential under reporting should be taken into consideration when interpreting data for these analytes.

Analysis for pH was unable to be completed within the allotted holding time of 6 hrs in most samples. The analytical data is deemed to be a true representation of the groundwater in the monitoring wells as the field and laboratory pH analysis is consistent.

ALS: ES2341301: Samples were extracted and analysed marginally outside recommended holding times for A_BH15_1.5-1.6 (soil matrix) for pH (7 days); QC300_20231127 and QC300_20231128 (water matrix, rinsate samples) for Total Petroleum Hydrocarbons, and Total Recoverable Hydrocarbons (TRHs) (4 and 3 days respectively).

ALS: ES2341790:

Analyte	Samples	Days Overdue Extraction	Days Overdue Analysis
pH	A-BH13_2.0-2.2 A-BH14_2.0-2.2	4	-
	A-BH20B_1.5-1.6	5	-
Moisture Content	A-BH16B_0.5-0.6 A-BH16B_1.5-1.6 QC100_011223 QC200_011223	-	7
	A-BH16B_0.1-0.2	-	52

ALS: ES2343534:Samples were extracted and analysed marginally outside recommended holding times for three samples collected from BH25 (soil matrix) for Nitrite as N; QC300_20231206 (water matrix, rinsate samples) for Polynuclear Aromatic Hydrocarbons (PAHs) and TPH/TRH.

6 of 17

ALS: ES2402822: The moisture content was 43 days overdue and mercury was 33 days overdue for analysis. The moisture content does not have any impact on the data interpretation as it is not a contaminant of concern. The mercury concentration was recorded below the LOR which was 40 times below than the most conservative criteria (NSW EPA Waste Classification Guideline (2014), CT1 criteria).

ALS: ES2343795: Samples were extracted and analysed outside recommended holding times (6 days) for trip blank sample for TRH/TPH; trip blank and trip spike samples and BTEXN method groups. Also, the holding time exceedances (4 days) occurred for the rinsate sample (QC300_20231208) for PCBs, OCPS, OPPs, phenolic compounds, PAHs, TRH and TPH.

ALS: ES2343854:

4. Frequency of Laboratory QA/QC	ALS: ES2341301, ES2401099 Laboratory duplicate and matrix spike samples were not reported for TRH – semi-volatile fraction in water matrix samples (rinsate samples). ALS: ES2414454, ES2415351, ES2401671 Laboratory duplicate and matrix spikes samples were not reported for PAH/Phenols in water matrix samples (leachate samples). The accuracy of the data can be assessed as acceptable based on method blanks and LCS (which were reported at or above the required frequencies and within control limits). ALS: ES2341790 Laboratory duplicate and matrix spike samples were not reported for pesticides in water matrix samples (rinsate sample). As the assessment is of soil there is no impact on the assessment. The accuracy of the data can be assessed as acceptable based on method blanks, LCS (which were reported at or above the required frequencies and within control limits). ALS: ES2343534, ES2344222, ES2344549, ES2408075, ES2409765, ES2409806, ES2409869, ES2410231, ES2410544, ES2410587, ES2410959, ES2411530, ES2409354, ES2343795, ES2344603 Laboratory duplicate and matrix spike samples were not reported for TRH – semi-volatile fraction, and PAH/ phenols in water matrix samples (rinsate samples). As the assessment is of soil there is no impact on the assessment. The accuracy of the data can be assessed as acceptable based on method blanks, LCS (which were reported at or above the required frequencies and within control limits). ALS: ES2402822, ES2408158 Laboratory duplicate sample frequency for moisture content was reported below the expected rate. The moisture content does not have impact on the data interpretation for this assessment. ALS: ES2337379 Matrix spikes were not reported at the required frequencies for Total Metals in soil matrix samples (rinsate samples). As the assessment is of soil there is no impact on the assessment. The accuracy of the data can be assessed as acceptable based on method blanks and LCS results (which were reported at or above the required frequencies and within control limits). ALS: ES2406391 Laboratory duplicate and matrix spike samples were not reported for total mercury and total metals in soil matrix samples. The precision of the data can be assessed as acceptable based on field duplicate relative percent difference (RPDs) and the accuracy of the data can be assessed as acceptable based on method blanks and LCS (which were reported at or above the required frequencies and within control limits). Laboratory duplicate and matrix spike samples were not reported for PAHs, phenols, pesticides, PCB, and TRH – semi-volatile fraction in water matrix samples (rinsate samples). As the assessment is of soil there is no impact on the assessment. The accuracy of the data can be assessed as acceptable based on method blanks and LCS results (which were reported at or above the required frequencies and within control limits).

Comments	
5. Limits of reporting	Limits of reporting were sufficiently low to enable assessment against adopted guideline criteria, with the exception of: • Vinyl chloride: criteria 4 mg/kg (NSW EPA [2014] contaminant threshold for general solid waste)/ LOR 5 mg/kg and criteria 1.7 mg/kg (US EPA regional screening levels for industrial soil/LOR 5 mg/kg • Cadmium: criteria 0.5 mg/kg (NSW 2014 Excavated Natural Material Order maximum average)/ LOR 0.4 to 1 mg/kg • 1,2-Dibromoethane (EDB): criteria 0.16 mg/kg (US EPA Regional Screening Levels (RSLs) for industrial soil/<0.5 mg/kg • Bromomethane: criteria 3 mg/kg (US EPA RSLs for industrial soil/5mg/kg • Trans-1,4-Dichloro-2-butene: criteria 0.032 mg/kg (US EPA RSLs for industrial soil/<0.5 mg/kg • cis-1,4-Dichloro-2-butene: criteria 0.032 mg/kg (US EPA RSLs for industrial soil/<0.5 mg/kg • 1,2-Dibromo-3-chloropropane: criteria 0.064 mg/kg (US EPA RSLs for industrial soil/<0.5 mg/kg • 1,2,3-Trichloropropane: criteria 0.11 mg/kg (US EPA RSLs for industrial soil/<0.5 mg/kg • Hexachlorocyclopentadiene: criteria 0.75 mg/kg (US EPA RSLs for industrial soil/<0.5 mg/kg The potential exists for concentrations of the above the adopted guideline, but below the laboratory LOR. The LOR was adopted as the assessment criteria for VOCs where the US EPA RSL criteria was less than the LOR.
6. Field blank	Field blank samples were not collected during the fieldwork due to oversight. No detected recorded in the rinsate sample collected from the date of the fieldwork. This outlier does not have any impact on the evaluation.
7. Rinsate blank	Concentrations were detected above the LOR in the following rinsate samples: • QC300_20231218 (ES2344222): trichloromethane (chloroform) – 8 µg/L • QC300_20231221 (ES2344603): zinc – 0.02 mg/L • QC300_20231105 (ES2401099): chromium – 0.002 mg/L Trichloromethane was not detected in soil samples therefore the detection in rinsate is not of concern. Zinc and chromium were well below the adopted soil assessment criteria in all samples analysed therefore the detections in rinsate are not of concern.

Comments	
8. Field intra/inter-laboratory duplicate RPDs	Field intra and inter-laboratory duplicate RPDs were generally reported within control limits. RPDs over 30% are listed below. ALS: ES2341790 • QC100 (intra-lab duplicate of A-BH16B_0.1-0.2- arsenic (%48), chromium (%32). However reported concentrations were below 10 times LOR. • QC200 (inter-lab of A-BH16B_0.5-0.6) - chromium (%31), and nickel (%53). • Field inter-laboratory sample (QC200_011223) was submitted to the primary laboratory for analysis due to oversight and analysed by the primary laboratory. ALS: ES2409869 • QC100_20240321 (intra-lab duplicate of R-TP07_0-0.1) – TRH >C10-C40 (100%) • QC200_20240321 (intra-lab duplicate of R-TP07_0-0.1) – PAHs (113%), copper (95%), lead (122%) and zinc (149%) • QC200_20240321 (inter-lab duplicate of R-TP07_0-0.1) – PAHs (113%), arsenic (82%), copper (95%), lead (115%) and zinc (143%) • QC200_20240322 (inter-lab duplicate of BH35_0.3-0.4) – TPH C10-C36 (108%), benzo(b&j)fluoranthene (86%), phenol (82%), phenol (82%), ALS: ES2409806 • QC100_20240324 (intra-lab duplicate of BH26_1.5-1.6) – zinc (38%) • QC200_20240324 (inter-lab duplicate of BH26_1.5-1.6) - TRH>C34-40 (109%), TPH C10-C36 (73%), PAHs (83%), benzo(a)pyrene TEQ half (80%), ALS: ES2411748 • QC100_20240408 (intra-lab duplicate of ACM-TP19_2.8-2.9) – chromium (62%), nickel (157%) ALS: ES2411530 • QC200_20240408 (inter-lab duplicate of BH06_2.0-2.5) – zinc (96%) The elevated RPDs all corresponded to concentrations less than 10 times the laboratory LOR. The precision and accuracy of the data is considered acceptable based on the intra-laboratory and inter-laboratory duplicate results respectively.

13 of 17

Comments	
9. Laboratory duplicate RPDs	Laboratory duplicate RPD results exceeding the control limits are listed below. ALS: ES2341790 Laboratory duplicate RPDs were within control limits, with the exception of lead (51.4%) which was reported outside the control limit of 0-20%. The laboratory duplicate was used another project and was not related with this laboratory report. The field duplicate results (QC100, and QC200) were compared with the primary samples and lead concentration RPDs were below than 20%. ALS: ES2343853 Laboratory duplicate RPDs were within control limits, with the exception of TRH – C6-C10 fraction (94.5 %) which was reported outside the control limit of 0% - 50%. As all concentrations of TRH C6-C10 fraction were reported well below the adopted guidelines, the elevated RPD is not considered to affect the interpretation of results against guidelines. The laboratory duplicate was used another project and was not related with this laboratory report. ALS: ES2337379 Laboratory duplicate RPDs were within control limits, with the exception of zinc (43.5%) which was reported outside the control limit of 0-20%. Eurofins: 1083748 • Copper (84%) in sample S24-Ap0004991 • Mercury (67%) in sample S24-Ap0004991 • Nickel (85%) in sample S24-Ap0004991 RPD Duplicates acceptance criteria is ≤30% however, results remained between 10-20 times the limit of reporting (LOR) (RPD must lie between 0-50%), passing the laboratory QC. Eurofins: 1087307 • TRH C15-C28 (42%) in sample N24-Ap0033296 • Arsenic (73%) in sample S24-Ap0033365 RPD duplicates acceptance criteria is ≤30% however, results remained between 10-20 times the LOR (RPD must lie between 0-50%), passing the laboratory QC. Eurofins: 1081719 • Arsenic (42%) in sample S24-Ma0060491 RPD Duplicates Acceptance Criteria is ≤30% however, results remained between 10-20 times the LOR (RPD must lie between 0-50%), passing the laboratory QC. Eurofins: 1087305 • Anthracene (74%) in sample S24-Ap0046479 • Benz(a)anthracene (66%) in sample S24-Ap0046479 • Benzo(a)pyrene (78%) in sample S24-Ap0046479 • Benzo(b&j)fluoranthene (85%) in sample S24-Ap0046479 • Benzo(g.h.i)perylene (79%) in sample S24-Ap0046479 • Benzo(k)fluoranthene (52%) in sample S24-Ap0046479 • Chrysene (74%) in sample S24-Ap0046479 • Fluoranthene (62%) in sample S24-Ap0046479 • Indeno(1.2.3-cd)pyrene (83%) in sample S24-Ap0046479 • Phenanthrene (45%) in sample S24-Ap0046479 • Pyrene (65%) in sample S24-Ap0046479 • Arsenic (73%) in sample S24-Ap0046479 RPD Duplicates acceptance criteria is ≤30% however, results remained between 10-20 times the LOR (RPD must lie between 0-50%), passing the laboratory QC.

10. Matrix spike (MS) % recoveries

Matrix spike recoveries (where reported) were within control limits, with the following exceptions:

ALS: ES2343795

Analyte	Sample	Recovery (%)	Range (%)	Comment
Copper	Anonymous	51.8	70.0-130	Recovery less than lower data quality objective

As the sample was not from the project the result does not give an indication of accuracy related to the soil sample matrix.

ALS: ES2343854

Analyte	Sample	Recovery (%)	Range (%)	Comment
PFAS	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels

As the sample was not from the project the result does not give an indication of accuracy related to the soil sample matrix. Also the non-determinations (ND) do not reflect method bias and do not affect data interpretation.

ALS: ES2407037

Analyte	Sample	Recovery (%)	Range (%)	Comment
Arsenic	Anonymous	58.6	70-130	Recovery less than lower data quality objective
Cadmium	Anonymous	53.8	70-130	Recovery less than lower data quality objective
Chromium	Anonymous	#ND	68-132	Background levels were greater than or equal to 4x spike levels
Copper	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels
Nickel	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels
Zinc	Anonymous	#ND	66-133	Background levels were greater than or equal to 4x spike levels

As the sample was not from the project the result does not give an indication of accuracy related to the soil sample matrix. Also the non-determinations (ND) do not reflect method bias and do not affect data interpretation.

ALS: ES2410544

Analyte	Sample	Recovery (%)	Range (%)	Comment
Copper	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels
Zinc	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels

15 of 17

Comments

As the sample was not from the project the result does not give an indication of accuracy related to the soil sample matrix. Also the non-determinations (ND) do not reflect method bias and do not affect data interpretation.

ALS: ES2410587

Analyte	Sample	Recovery (%)	Range (%)	Comment
Copper	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels
Zinc	Anonymous	#ND	70-130	Background levels were greater than or equal to 4x spike levels

As the sample was not from the project the result does not give an indication of accuracy related to the soil sample matrix. Also the non-determinations (ND) do not reflect method bias and do not affect data interpretation.

ALS: ES2337379

Analyte	Sample	Recovery (%)	Range (%)	Comment
Fluoride	ACM-TP03 _0.5-0.6	65.9	70-130	Recovery less than lower data quality objective

Fluoride in sample ACM-TP03_0.5-0.6 may be slightly higher than reported due to matrix interference in the sample. As this is not a contaminant of concern there is no impact on the assessment.

ALS: ES2409354

Analyte	Sample	Recovery (%)	Range (%)	Comment
Naphthalene	BH04A_ 0.4-0.5	145	70-130	Recovery greater than upper data quality objective

Naphthalene in sample BH04A_0.4-0.5 may be lower than reported based on the matrix spike result. As the sample result was less than the adopted assessment criteria there is no impact on the assessment.

16 of 17

Comments

11. Surrogate % recoveries

Surrogate spike recoveries were within control limits, with the exception of those listed below.

ALS: ES2341301

Lab Method & Surrogate	Sample ID	Recovery (%)	Limit (%)	Comment
EP080: Toluene-D8	QC300_20231127	75.2	75.3-131	Recovery less than lower data quality objective

The surrogate recovery for toluene was slightly below the minimum recovery limit in the rinsate sample QC300_20231127. However, toluene was not detected in any primary soil samples so there is no impact on the assessment.

ALS: ES2343534

Lab Method & Surrogate	Sample ID	Recovery (%)	Limit (%)	Comment
EP080: Toluene-D8	QC300_20231127	75.2	75.3-131	Recovery less than lower data quality objective

The surrogate recovery for toluene was slightly below the minimum recovery limit in the rinsate sample QC300_20231127. However, toluene was not detected in any primary soil samples.

ALS: ES2408075

Lab Method & Surrogate	Sample ID	Recovery (%)	Limit (%)	Comment
EP075: Anthracene -D10	BH41_0.8-1.0	65.6	66-128	Recovery less than lower data quality objective

The surrogate recovery for PAHs was slightly below the minimum recovery limit, however as there was only onesamples out of all samples below the limit there is no impact on interpretation of the data.

ALS: ES2409702

Lab Method & Surrogate	Sample ID	Recovery (%)	Limit (%)	Comment
EP075(SIM)T: 2-Fluorobiphenyl	HA59_0.6-0.7	69.1	70.0-122	Recovery less than lower data quality objective

The surrogate recovery for phenols was slightly below the minimum recovery limit, however as there were only two samples out of all samples below the limit there is no impact on interpretation of the data.

ALS: ES2409806

Lab Method & Surrogate	Sample ID	Recovery (%)	Limit (%)	Comment
EP075(SIM)S: 2.4.6-Tribromophenol	BH26_1.1-1.2	32.9	40.0-138	Recovery less than lower data quality objective

The surrogate recovery for phenols was slightly below the minimum recovery limit, however as there were only two samples out of all samples below the limit there is no impact on interpretation of the data.

AECOM Imagine it. Delivered.

DATA VALIDATION REPORT - GROUNDWATER

Project Manager:	James Jentz	**Validation by:**	Marcelo Frederico
Project Number:	60709736 / CDRL 400	**Date:** 19/08/2024	
Site:	Wyong Town Centre		
Matrix:	Water	**Data Verified by:**	Kate McGrath
Laboratory:	ALS (primary) and Eurofins	**Date:** 13/10/2024	
Lab reference:	**ALS** ES2412153 ES2413389 **Eurofins** 1089086	 ES2411585 ES2411983	

Key Findings:

- Where pH holding times were not be met (BH01, A-BH03, A-BH06, BH29, BH42, R-BH37) pH field readings should be used when using the data quantitatively.
- The limit of reporting (LOR) exceeding the criteria for benzo(a)pyrene, vinyl chloride, and bromochlorine should be taken into consideration when interpreting the groundwater results against the adopted assessment criteria for recreational receptors.

Component		Outliers			Material impact on interpretation

Laboratory control spike (LCS) % recoveries (DQI limit – 70-130% or laboratory specific recovery range)		✓			No
Surrogate % recoveries (DQI limit - (DQI limit – 70-130% or laboratory specific recovery range)		✓			No
Other observations		✓			No

Comments	
1. Frequency of field QA/QC	As per project specifications, a per- and polyfluoroalkyl substance (PFAS) field blank was not collected and analysed. PFAS compounds were detected well below the adopted assessment criteria in the primary and duplicate samples, therefore the absence of field blanks for PFAS has no implications on the interpretation of the data. A rinsate sample was not collected for the sampling day of the 12 April 2024 when GW28 was sampled. As rinsate samples were collected on all other groundwater sampling dates and the rinsate results were all less than the laboratory LOR. All other field QA/QC met the required frequencies.

2 of 4

2. Sample handling/ preservation/ holding times

Holding times – samples were extracted and analysed marginally outside recommended holding times laboratory reports and samples:

ALS: ES2411585

Analyte	Samples	Days Overdue Extraction	Days Overdue Analysis
pH by PC Titrator	BH01, A-BH06	-	1
pH by PC Titrator	BH42	-	5
Total Petroleum Hydrocarbons	Trip Blank	3	3
Total Recoverable Hydrocarbons - NEPM 2013 Fractions	Trip Blank	3	3
BTEXN	Trip Blank	3	3

ALS: ES2411983

Analyte	Samples	Days Overdue Extraction	Days Overdue Analysis
Total Petroleum Hydrocarbons	Trip Blank	7	7
Total Recoverable Hydrocarbons - NEPM 2013 Fractions	Trip Blank	7	7
BTEXN	Trip Blank	7	7

ALS: ES2412153

Analyte	Samples	Days Overdue Extraction	Days Overdue Analysis
pH by PC Titrator	A-BH03	-	8
pH by PC Titrator	BH29, R-BH37	-	7
Total Petroleum Hydrocarbons	Trip Blank	8	8
Total Recoverable Hydrocarbons - NEPM 2013 Fractions	Trip Blank	8	8
BTEXN	Trip Blank	8	8

Where pH holding times were not be met, pH field readings should be used when using the data quantitatively. The trip blank results could be under reported due to holding time exceedances, however this does not impact on the interpretation of the primary results.

Handling/preservation

ALS: ES2413389

Sample receipt temperatures (9.2°C, 7.0°C, 8.1°C – ice present) were outside of the recommended range (≤6°C) (samples BH26_SV1(S) and QC300_20240423). However, it was mentioned that “ice present’ for attempt of cooling. As the temperature was only marginally above the recommended range there is not considered to be a material implication on the interpretation of the data for the two samples in the batch.

3 of 4

Comments

3. Frequency of Laboratory QA/QC	<u>ALS: ES2411585 and ES2413389</u> Laboratory duplicate and matrix spike samples were not reported for TRH semi-volatile fraction, and PAH/ phenols . The precision of the data can be assessed as acceptable based on the intra-laboratory duplicate results and the accuracy of the data can be assessed as acceptable based on method blanks, LCS, surrogate and inter-laboratory duplicates results (which were reported at or above the required frequencies and within control limits). <u>ALS: ES2412153</u> Laboratory duplicate and matrix spike samples were not reported PFAS. The precision of the data can be assessed as acceptable based on the intra-laboratory duplicate results and the accuracy of the data can be assessed as acceptable based on method blanks, LCS, surrogate and inter-laboratory duplicates results (which were reported at or above the required frequencies and within control limits).
4. Limits of reporting	LORs exceeded the adopted assessment criteria for recreational receptors for the following: • benzo(a)pyrene (LOR – 0.5/0.6 µg/L, criteria – 0.1 µg/L) • vinyl chloride (LOR <50 µg/L, criteria – 3 µg/L) • bromochlorine (LOR <10 µg/L, criteria – 10 µg/L) These LORs should be taken into consideration when interpreting the data.
5. Field intra-laboratory duplicate RPDs	BH26/QC100 had an RPD of 133% for copper (0.005/<0.001mg/L) exceeding the 30% DQI limit. The elevated RPD is likely attributed to the result being less than 10 times the laboratory LOR.
6. Field inter-laboratory duplicate RPDs	BH26/QC200 had an RPD of 133% for copper (0.005/<0.001mg/L), nickel (0.006/0.004 mg/L) and zinc (0.026/0.017 mg/L) exceeding the 30% DQI limit. The elevated RPDs are likely attributed to the results being less than 10 times the laboratory LOR.
7. Matrix spike (MS) % recoveries	Matrix spike recoveries (where reported) were within control limits, with the following exceptions: <u>ALS: ES2412153</u>

Analyte	Recovery (%)	Range (%)	Comment
Sulfate as SO_4	#Not Determined	70-130	MS recovery not determined, background level greater than or equal to 4 x spike level
Ammonia as N	#Not Determined	70-130	MS recovery not determined, background level greater than or equal to 4 x spike level

There is no material impact on the interpretation of the data as the accuracy of the data can be assessed as acceptable based on the other MS results as well as method blanks and LCS (which were reported at or above the required frequencies and within control limits).

AECOM

Data Validation Report -Soil Vapour

Project number:	60709736	**Field Team:**	E.Serttas
Site:	Wyong Town Centre	**Sampling dates:**	4 July 2024
Matrix:	Soil Vapour	**Validation by:**	M.Frederico
Primary Laboratory:	Eurofins	**Date:**	19/08/2024
Secondary Laboratory	-	**Data verified by:**	K.McGrath
Lab batch refs	1091616	**Date:**	13/10/2024

Key Findings:

The soil vapour analytical data can be used as a basis for interpretation, subject to the limitations outlined below:

- concentrations of COPC chloromethane to be above the adopted guideline, but below the laboratory LOR. This should be taken into consideration when interpreting data and using data quantitatively.
- elevated RPDs for monocyclic aromatic hydrocarbons (MAHs) should be taken into consideration when using the data quantitatively.

Component	Frequency/ Control Limit[1]	Meets Requirements	
		Y/N	If no refer to:
Frequency of field quality assurance/quality control (QAQC)		Y	
Number of tests requested/reported		Y	
Sample handling/preservation/holding times		Y	
Frequency of laboratory QA/QC		Y	
Limits of reporting (LOR)	< guideline	N	1
Blanks Method blank	1 batch / <LOR	Y	
Field intra-laboratory relative percent differences (RPDs)	<30%	N	2
Field inter-laboratory RPDs	<30%	n/a	
Laboratory duplicate sample (LDS) RPDs	Variable	n/a	
Matrix spike (MS) % recoveries	70-130%	n/a	
Laboratory control spike (LCS) % recoveries	70-130%	Y	
Surrogate % recoveries	per lab limits	n/a	
Other observations			

[1] Refer to SAQP for further details

Comments	
1. Limits of reporting	Limits of reporting were sufficiently low to enable assessment against adopted guideline criteria, with the exception of the chloromethane where the LOR (22 to 27 µg/m^3) was marginally above the DECCW (2010) Vapour Intrusion Technical Practice Note criteria. As no chlorinated hydrocarbon compounds were detected in the samples analysed there is no impact on the interpretation of the data. The potential exists for concentrations of COPC chloromethane to be above the adopted guideline, but below the laboratory LOR. This should be taken into consideration when interpreting data and using data quantitatively.
2. Field intra-laboratory duplicate RPDs	Field intra-laboratory duplicate RPDs were reported within control limits for the duplicate sample (SV2/QC100), with the exception of monocyclic aromatic hydrocarbons (MAHs) (toluene, ethylbenzene, xylene, styrene, 1-methyl-4 ethyl benzene and 1,2,4-trimethylbenzene) (as shown in the RPD table). As all concentrations of the above were reported at least 4 orders of magnitude below the adopted guideline(s), the elevated RPD is not considered to affect the interpretation of results against guidelines. However, the elevated RPD should be taken into consideration when using the data quantitatively.

**RPDs have only been considered where a concentration is greater than 1 times the EQL.

**Elevated RPDs are highlighted as per QAQC Profile settings (Acceptable RPDs for each EQL multiplier range are: 81 (1 - 10 x EQL); 50 (10 - 30 x EQL); 30 (> 30 x EQL))

***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Borelogs

AECOM

Soil and Rock Logging Explanatory Notes and Abbreviations

AS1726-2017

Soil and rock descriptions on the engineering log sheets are in accordance with AS1726 – 2017-Geotechnical Site Investigations. For full details of the logging standards refer to Section 6 of AS1726-2017. A summary of the sequence of descriptive terms used to describe soil and rock on the engineering log sheets is outlined below.

AECOM logs prepared prior to July 2017 were prepared generally in accordance with AS1726 - 1993. The soil classification system adopted in AS1726-2017 differs from the Unified Soil Classification System (USCS) and the logging standards recommended in AS1726-1993 significantly in the criteria used to distinguish between coarse and fine grained soils (see Soil Description below).

Soil Description

SOIL NAME: plasticity or particle characteristics of major component; colour; structure; secondary and other minor components. The AS1726 Group Symbol; consistency/density; and moisture condition are listed as abbreviations in separate columns. Geological origin and additional observations as required such as soil origin i.e. FILL, ALLUVIUM and other significant details are recorded in a separate column.

The major soil component (capitalised) is assessed after removal of cobble size or larger components (>63mm), soils containing 35% or more passing the 75 micron sieve are classified as fine grained soils. Fine grained soils are classified on the behaviour of the fine grained component, not percentage of silt and clay.

This is a significant departure from the previous AS1726-1993 where soils had to contain 50% or more passing the 75 micron sieve to be classified as a fine grained soil. This results in materials containing 50% or more coarse grained material previously described as coarse grained (e.g. “sandy CLAY/clayey SAND” or “silty SAND”) now being described as fine grained soils if they contain at least 35% fines (e.g. “sandy CLAY” or “sandy SILT”). Additionally, many fine grained soils previously described as containing both silt and clay (e.g. “silty CLAY”, “CLAY: with silt”) are now described as either CLAY or SILT with no mention of the other fine component. The exception is where behaviour is borderline, in which case “clayey SILT” is used.

Rock Description

ROCK NAME: grain size and type; colour; fabric and texture; structure; minor components; and bedding dip. The geological formation; rock strength; weathering/alteration; mass defect spacing; and defect descriptions are listed under separate columns.

Extremely weathered material is prefixed as such followed by a description of the soil properties. Similarly in situ weathering or infilling of defects greater than 100 mm thick with soil or extremely weathered material is described using relevant soil properties in the description column of the engineering log sheet.

Field Samples and In Situ Tests

Field samples and tests are recorded in the relevant column using abbreviations described under General Symbols and Abbreviations.

Field tests have been used to assess soil consistency/density and rock strength, and unless specifically stated otherwise, have been transferred directly to the engineering log sheets and not modified to coincide with laboratory results. Field descriptions may be used as an independent estimate of material properties which can be correlated with other data.

Organic and Artificial Material

Soil containing greater than 25% organic material is described as PEAT. Soils containing between 2% and 25% organic material are prefixed by “Organic” (e.g. Organic CLAY). TOPSOIL is a specific soil origin that may also contain both living and dead organic materials. Organic matter is described using terms such as fibrous peat, charcoal, wood fragments, roots (>2mm diameter) or root fibres (<2mm diameter)

Any material containing evidence that it has been placed by man-made mechanisms, including compacted embankment materials and materials containing evidence of artificial materials is prefixed as FILL. Waste fill is described using terms such as domestic refuse, oil, bitumen, brickbats, concrete rubble, fibrous plaster, wood pieces, wood shavings, sawdust, iron filings, drums, steel bars, steel scrap, bottles, broken glass, or leather.

Organic and artificial material cannot be adequately described using soil classification terms. They are mentioned, at the end of the description using qualitative terms such as “rare”, “occasional” or “frequent”, e.g. “SAND with rare gravel size brick fragments”. These qualitative terms are relative, for which no definition of percentage is given.

Structure

The structure of soil (or rock) is usually applicable to cohesive soils or rock. Typical terms that are used on the engineering log sheets include; *intact* (no joints), *fissured* (closed joints), *voided*, *vesicular*, *slickensided* (sheared), *interbedded*, *laminated* and *cemented*.

Plasticity

Descriptive Term	Range of Liquid Limit (%)
Low plasticity	≤ 35
Medium plasticity	> 35 ≤ 50
High plasticity	> 50

Colour

Colour has been assessed in the “moist” condition using basic colours and the modifiers pale, dark and mottled. Borderline colours are described as a combination of the two colours (e.g. red-brown). When describing the colour of defect infill, the following abbreviations are used in the defect description column.

Colour abbreviations

Term	Abbreviation
Brown	br
Grey	gy
Black	bk
White	wh
Blue	bl
Green	gr
Yellow	yl
Orange	or
Red	rd
Pale	pl
Dark	dk
Mottled	mtld

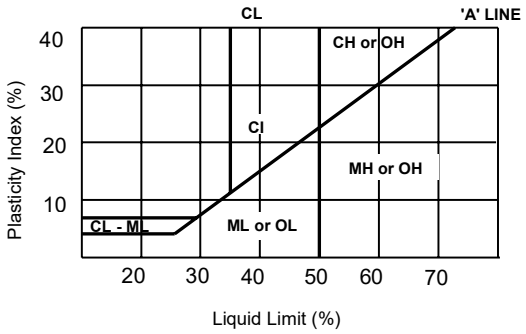
Moisture Condition

Term	Symbol	Description	
		Cohesive	Granular
Dry	D	Cohesive; hard and friable or powdery, very dry of plastic limit	Cohesion-less and free running
Moist	M w<PL w~PL w>PL	Soil feels cool, darkened in colour, can be moulded, typically with moisture content (w) between plastic limit (PL) and liquid limit (LL) as indicated	Soil feels cool, darkened in colour, tends to cohere
Wet	W w~LL w>LL	Soil feels cool, dark, usually weakened, free water, typically with moisture content (w) approximately at or wet of liquid limit (LL) as indicated	Soil feels cool, darkened in colour, tends to cohere, free water

Geological Origin

Term		Description
Weathered in Place Material	Extremely weathered material	Structure and fabric of parent rock visible (NOTE – described with soil terminology)
	Residual Soil	Structure and fabric of parent rock not visible
Transported Soils	Aeolian soil	Deposited by wind
	Alluvial soil	Deposited by streams and rivers
	Colluvial soil	Deposited on slopes (transported downslope)
	Lacustrine soil	Deposited by lakes
	Marine soil	Deposited in oceans, bays, beaches and estuaries
TOPSOIL	Mantle of surface and/or near surface soil often but not always defined by high levels of organic material (prefix to soil description)	
FILL	Soil, rock or refuse placed by humans in either controlled or uncontrolled conditions (prefix to soil description)	

Where there is doubt to origin ‘possibly’ or ‘probably’ are used.



AECOM

Soil Classification

Field Identification Procedures (Excluding particles larger than 63mm and basing fractions on estimated mass)				Log Graphic	Group Symbol	Typical Names	Secondary and Minor Components	Laboratory Classification Criteria	
Coarse Grained Soils More than 65% of material less than 63 mm is larger than 0.075 mm	GRAVEL More than 50% of coarse fraction is larger than 2.36mm	clean GRAVEL (<5% fines)	Wide range in grain size and substantial amounts of all intermediate sizes, not enough fines to bind coarse grains, no dry strength		GW	Well graded GRAVEL or sandy GRAVEL	Fine Grains >12% >5% ≤12% ≤5% Coarse Grains >30% >15% ≤30% ≤15% Secondary/Minor Descriptor Prefix "sandy", "silty" etc. Add "with sand/silt" etc. Add "trace sand/silt" etc.	Laboratory grain size curve used in identifying the fractions as given under field identification	$c_u = \frac{D_{60}}{D_{10}}$ $C_u \geq 4$ $c_c = \frac{(D_{30})^2}{D_{10} x D_{60}}$ Cc=1 – 3
			Predominantly one size or range of sizes with some intermediate sizes missing, not enough fines to bind coarse grains, no dry strength		GP	Poorly graded GRAVEL or sandy GRAVEL			<5% fines, not meeting all gradation requirements for GW.(i.e. Cu < 4 or Cc ≠ 1 – 3)
		GRAVEL (≥12% fines)	'Dirty' materials with excess of non-plastic fines, zero to medium dry strength		GM	silty GRAVEL or silty sandy GRAVEL			≥12% Fines with Atterberg limits below 'A' line
			'Dirty' materials with excess of plastic fines, medium to high dry strength		GC	clayey GRAVEL or clayey sandy GRAVEL			≥12% Fines with Atterberg limits above 'A' line
	SAND More than 50% of coarse fraction is smaller than 2.36mm	Clean SAND (<5% fines)	Wide range in grain size and substantial amounts of all intermediate sizes, not enough fines to bind coarse grains, no dry strength		SW	Well graded SAND or gravelly SAND			$c_u = \frac{D_{60}}{D_{10}}$ $C_u \geq 6$ $c_c = \frac{(D_{30})^2}{D_{10} x D_{60}}$ Cc=1–3
			Predominantly one size or range of sizes with some intermediate sizes missing, not enough fines to bind coarse grains, no dry strength		SP	Poorly graded SAND or gravelly SAND			<5% fines, not meeting all gradation requirements for SW. (i.e. Cu < 6 or Cc ≠ 1 – 3)
		SAND (≥12% fines)	'Dirty' materials with excess of non-plastic fines, zero to medium dry strength		SM	silty SAND			≥12% Fines with Atterberg limits below 'A' line.
			'Dirty' materials with excess of plastic fines, medium to high dry strength		SC	clayey SAND			≥12% Fines with Atterberg limits above 'A' line.

Fine Grained Soils 35% or more of material less than 63 mm is smaller than 0.075 mm	IDENTIFICATION PROCEDURES ON FRACTIONS < 0.2 mm								
		LIQUID LIMIT	DRY STRENGTH	DILATANCY	TOUGHNESS				
	SILT	>50%	Low to medium	None to slow	Low to medium		MH	Inorganic SILT, gravelly SILT, sandy SILT	Secondary fine grained soil not described except for borderline SILT/CLAY mixtures described as "clayey SILT" Coarse grained Secondary/Minor descriptors: prefix "gravelly" "or "sandy" as appropriate >30% ≤30% add "with sand/gravel" as appropriate >15% ≤15% add "trace sand/gravel" as appropriate
		≤50%	None to low	Slow to rapid	Low		ML	Inorganic SILT and very fine sand, rock flour, silty or clayey fine sand or silt.	
			Low to medium	Slow	Low		OL	Organic SILT (2%<organics<25%)	
	Borderline SILT/ CLAY	≤35%	Low to Medium	None to slow	Low to Medium		ML-CL	clayey SILT	
	CLAY	>50%	High to very high	None	High		CH	Inorganic CLAY, sandy CLAY, gravelly CLAY	
		>35 and ≤50%	Medium to high	None to slow	Medium		CI		
		≤35%					CL		
		>35%	Medium to high	None to very slow	Low to medium		OH	Organic CLAY (2%<organics<25%)	
	PEAT (>25% organic by dry weight)		Readily identified by colour, odour, spongy feel and frequently by fibrous texture				Pt	PEAT, sandy PEAT	

Laboratory classification from Modified Cassagrande Chart

Modified Cassagrande Chart for classification of fine-grained soils

Boundary classifications – Soils possessing characteristics of two groups are designated by combinations of group symbols. For example: GP-GC for gravel with between 5 and 12% clay fines; CI-CH for clay soils where field estimates of plasticity are borderline between medium and high

Other log graphics: FILL, TOPSOIL, ASPHALT, CONCRETE, sandy GRAVEL, gravelly SAND, gravelly SILT, sandy SILT, gravelly CLAY, sandy CLAY

AECOM

Sedimentary and Metamorphic Rock Types, Grain Size, Defect Spacing and Planar Structure

Grain Size/ Spacing Thickness	Soil Grain Size Term	Rock Type							Defect Spacing Term	Bedding Thickness Term
		Sedimentary				Metamorphic		Igneous/ Metamor-phic grain size		
		Deposited rock type	≥90% carbonate (prefix IMPURE 50%-90%)		Volcanic ejecta	Foliated	Non-Foliated			
			Low porosity	Porous						
> 2m	large BOULDERS	CONGLOMERATE (larger rounded grains in a finer matrix) *or* BRECCIA (angular or irregular rock fragments in a finer matrix)	LIMESTONE (predominantly $CaCO^3$) or DOLOMITE (predominantly $CaMgCO^3$)	CALCIRUDITE	AGGLOMERATE (rounded grains in a finer matrix) *or* VOLCANIC BRECCIA (angular or irregular fragments in a finer matrix)	GNEISS	MARBLE (crystalline $CaCO^3$)/ QUARTZITE (fused quartz)/ SERPENTINITE (mafic igneous)/ HORNFELS (fine thermal)	COARSE	VERY WIDE (VW)	VERY THICKLY BEDDED
0.6 - 2m	medium BOULDERS								WIDE (W)	THICKLY BEDDED
0.2 - 0.6 m	small BOULDERS								MEDIUM (M)	MEDIUM BEDDED
60 - 200 mm	COBBLES								CLOSE (C)	THINLY BEDDED
20 - 60 mm	coarse GRAVEL								VERY CLOSE (VC)	LAMINATED
6 - 20 mm	medium GRAVEL								EXTREMELY CLOSE (EC)	THINLY LAMINATED
2 - 6 mm	fine GRAVEL								-	VERY THINLY LAMINATED
0.6 - 2.0 mm	coarse SAND	SANDSTONE/ GREYWACKE (rock fragments)/ ARKOSE (mainly feldspar)/ QUARTZOZE SANDSTONE (quartz and siliceous cement)		CALCARENITE	TUFF	SCHIST		MEDIUM		-
0.2 - 0.6 mm	medium SAND									
0.06 - 0.2 mm	Fine SAND									
2 - 60 µm	SILT	MUDSTONE/ SHALE (fissile)/ LAMINITE (bedded) / SILTSTONE		CALCISILTITE	Fine grained TUFF	PHYLLITE (undulose)/ SLATE (planar)		FINE		
< 2 µm	CLAY			CALCILUTITE						

Note: EVAPORITE is sedimentary rock which consist mainly of salts e.g.: Halite (NaCl), Anhydrite and Gypsum ($CaSO_4$); COAL is mostly organic sedimentary rock that consists of indurated accumulations of plant debris

Classification of Igneous Rocks (Massive Crystalline)

Grain Size (mm)	Much quartz, pale (felsic)	⟷	Little quartz, dark (mafic)
COARSE (>2)	GRANITE	DIORITE	GABBRO
MEDIUM (0.06-2)	MICROGRANITE	MICRODIORITE	DOLERITE
FINE (<0.06)	RHYOLITE	ANDESITE	BASALT

Note: PEGMATITE consist of large crystals often forming a dyke or vein
VOLCANIC GLASS and OBSIDIAN are rocks that have cooled quickly and have a glassy texture
APLITE may occur as light coloured veins of quartz and feldspar in other igneous rocks
PORPHYRY is an igneous rock consisting of large crystals in a much finer matrix

Duricrust (soils cemented to rock)

FERRICRETE (iron oxide cemented)
SILCRETE (silica cemented)
GYPCRETE (salt cemented)
CALCRETE ($CaCO_3$ cemented – dominated by replacement features)

No Core

NO CORE (description, defect and strength logs show beak in logging)

AECOM

Grain Size

Soil Type	Fine Grained Soil		Coarse Grained Soil						Oversize
	Clay	Silt	Sand			Gravel			Cobbles
			Fine	Medium	Coarse	Fine	Medium	Coarse	
Grain Size	< 2 µm	2-75 µm	0.075-0.21 mm	0.21-0.6 mm	0.6-2.36 mm	2.36-6.7 mm	6.7-19 mm	19-63 mm	63-200 mm
Field Guide	Shiny, Not visible under 10x	Dull, Visible under 10x	Visible by eye	Visible at < 1 m	Visible at < 3 m	Visible at < 5 m	Road gravel	Rail ballast	Beaching

Boulders (>200mm) and Cobbles (63-200mm) are considered oversize materials and are separated from the sample prior to describing the soil. Where cobbles or boulders are present the soil description is preceded by 'MIXTURE OR SOIL AND COBBLES/BOULDERS' with the word order indicating the dominant proportion first followed by the soil description and the estimate proportion of oversize materials indicating whether they are supported by the soil matrix.

Grain Shape

	Angular	Sub-angular	Sub-rounded	Rounded
Equi-dimensional particles				

Essentially two-dimensional particles are described as "flaky" or "platy" while essentially one dimensional particles are described as "elongated". Particle composition should be described where significant (e.g. "quartz sand")

Relative Density (non-cohesive soils)

Term	Very Loose	Loose	Medium Dense	Dense	Very Dense
Symbol	VL	L	MD	D	VD
Density Index (%)	≤ 15	> 15 ≤ 35	> 35 ≤ 65	> 65 ≤ 85	> 85
Uncorrected SPT (N) Blow count #	0 - 4	4 - 10	10 - 30	30 - 50	> 50
Field Guide	Ravels	Shovels easily	Shovelling very difficult	Pick required	Pick difficult

NOTE: Density Index as a measure of relative density only applies to dry cohesionless soils. Correlations between relative density and SPT vary considerably depending on grain size and angularity, overburden pressure, moisture content, fines content, cementation and SPT efficiency. The above SPT correlation is a rough field guide for clean, dry, fine to medium sands at a depth of 5 to 15m after Gibbs & Holtz (1957). Where relative density is important to design, more detailed correlations taking into account the factors discussed above should be considered.

Consistency (cohesive soils)

Based on undrained strength (S_u) estimated in field from pocket penetrometer or shear vane

Term	Very Soft	Soft	Firm	Stiff	Very Stiff	Hard
Symbol	VS	S	F	St	VSt	H
Undrained Shear Strength (kPa)	≤12	>12 ≤ 25	>25 ≤ 50	>50 ≤100	>100 ≤ 200	>200
Approx. SPT (N) Blow count #	0 - 2	2 - 4	4 – 8	8 - 15	15 - 30	> 30
Field Guide	Exudes between the fingers when squeezed	Can be moulded by light finger pressure	Can be moulded by strong finger pressure	Cannot be moulded by fingers. Can be indented by thumb	Can be indented by thumb nail	Can be indented with difficulty with thumb nail

NOTE: SPT is not a direct measure of consistency and ranges are only a rough field guide. Plasticity, fissuring, moisture, and sand and gravel content can all affect SPT values dramatically.

Rock Strength

Term	Soil	Very Low	Low	Medium	High	Very High	Extremely High
SYMBOL	soil	VL	L	M	H	VH	EH
UCS (MPa)	≤ 0.6	> 0.6 ≤ 2	>2 ≤ 6	> 6 ≤ 20	> 20 ≤ 60	> 60 ≤ 200	> 200
$I_{s\,(50)}$ (MPa) see note 1&3	-	> 0.03 ≤ 0.1	> 0.1 ≤ 0.3	> 0.3 ≤ 1	> 1 ≤ 3	> 3 ≤ 10	> 10
FIELD GUIDE	Soil strength – logged as soil using consistency	Material crumbles under firm blow with sharp end of pick. Can be peeled with a knife. Too hard to cut a triaxial sample by hand. Pieces up to 3 cm thick can be broken by finger pressure.	Easily scored with a knife. Indentations of 1mm - 3mm in the specimen with firm blows of the pick point. Has dull sound under hammer. A piece of core 150 mm long 50 mm diameter may be broken by hand	Readily scored with a knife. A piece of core 150 mm long 50 mm diameter can be broken by hand with difficulty	A piece of core 150 mm long 50 mm diameter cannot be broken by hand but can be broken with by a pick with a single firm blow. Rock rings under hammer	Hand specimen breaks with a pick after more than one blow. Rock rings under hammer	Specimen requires many blows with a geological pick to break through intact material. Rock rings under hammer

Note:
1. The strength of rock material should be based on UCS of materials close to in situ moisture content. $I_{s(50)}$ should only be used where not practical to undertake UCS tests
2. Anisotropy of rock material samples may affect the field assessment of strength
3. The unconfined compressive typically ranges from 10 to 20 times the $I_{s(50)}$ but the multiplier may vary widely for different rock types

Degree of Weathering / Alteration

Weathering and alteration relate to the rock fabric. Both involve physical and chemical changes to the rock due to changes in pressure, temperature, moisture and chemical environment. Weathering is in response to changes from exposure at the earth's surface while alteration is caused by hot liquids or gasses at depth. The distinction between weathering and alteration is important because they are likely to have different distribution patterns.

AECOM

Degree of Weathering / Alteration		Weathering Symbol/ Alteration Symbol		Weathering/ Alteration Description
Residual Soil		RS		Material is weathered to such an extent that it has soil properties. Mass structure and material texture and fabric of original rock are no longer visible but the soil has not been significantly transported.
Extremely Weathered / Extremely Altered		XW / XA		Material is weathered/ altered to such an extent that it has soil properties. Mass structure and material texture of original rock are still visible. Logged as "Extremely weathered/ altered material" and described as a soil.
Highly Weathered / Highly Altered	Distinctly Weathered/ Distinctly Altered	HW / HA	DW/ DA	The whole of the rock material is discoloured usually by staining or bleaching to the extent that the colour of the original rock is not recognisable. Rock strength is changed by weathering/alteration. Some primary minerals weathered to clay minerals. Porosity may be increased by leaching, or may be decreased due to deposition of weathering product/precipitation of secondary minerals in pores.
Moderately Weathered / Moderately Altered		MW / MA		The whole of the rock material is discoloured usually by staining or bleaching to the extent that the colour of the original rock is not recognisable but shows little or no change in strength from fresh rock.
Slightly Weathered / Slightly Altered		SW / SA		Rock is partially discoloured (with staining or bleaching along joints in the case of weathering) but shows little or no change in strength from fresh rock.
Fresh		FR		Rock shows no sign of decomposition of individual minerals or colour changes.

NOTE: 1. The term "Extremely Weathered/Altered rock" as a description is misleading. Described as Extremely weathered/altered material" followed by material description as a soil.
2. DW/ DA = Distinctly Weathered/Altered is used where it is not practical to distinguish between HW/HA and MW/MA on basis of strength change

In some instances it may be appropriate to describe weathering as part of a rock mass classification system. Where this is used the rock mass classification including the specifics of the weathering related to each rock class is described in the body of the report.

Common Defects in Rock Masses

Defects are described in the description column in the following order, defined by abbreviations:

Type; dip/direction; planarity; roughness; infill/coating; colour. To indicate the defect has been healed, healed is printed at before the defect type.

E.g. P,30/145°,PL,ro,1mm,CH,gy indicates a parting with 30° dip, 145° dip direction, planar, rough surfaces, 1mm thick, filled with grey high plasticity clay.

Defects with a perpendicular thickness up to 10 mm thick are described as partings or joints. Defects 10mm to 100mm thick perpendicular to the defect are described as seams or zones. Defects greater than 100mm thick or intersecting the full width of the core for more than 100mm are described as new material strata on the log.

Defects can be either described individually or grouped into generalised defect sets with similar properties. Individual defects are marked with a leader on the left side of the defect portion of the log, while generalised defects are written on the right side of the defect description area of the log. The extent to which defects are described individually or generalised depends on the nature of the core being logged.

Defect Type

Log Symbol		Appearance	Term		Definition
P			**Parting**		A surface or crack, parallel or sub-parallel to layering or planar anisotropy (bedding or cleavage), across which the rock has little or no tensile strength. May be open or closed
J			**Joint**		A surface or crack, with no apparent shear displacement across which the rock usually has little tensile strength, but which is not parallel or sub-parallel to bedding/cleavage.
S			**Sheared Surface#**		A near planar, curved or undulating surface which is usually smooth, polished or slickensided and which shows evidence of shear displacement.
SZ			**Sheared Zone#**		Zone of rock material with roughly parallel near planar, curved or undulating boundaries cut by closely spaced joints, sheared surfaces or other defects. Some of the defects are usually curved and intersect to divide the mass into lenticular or wedge shaped blocks.
MB			**Mechanical Break**		A break in rock mass not caused by natural effects. Example causes include drilling, testing and storage
SH			**Seams**	**Sheared Seam#**	Seam of roughly parallel boundaries of rock substance cut by closely spaced joints or cleavage surfaces.
CR				**Crushed Seam#**	Seam with roughly parallel boundaries composed of mainly angular fragment of the host rock substance.
NF	SS*			**Infilled Seam**	Seam with distinct roughly parallel boundaries. The infill is caused by migration of soil into open joints.
EW				**Extremely Weathered Seam**	Seam of soil substance weathered from host rock.

NOTES: # sheared, surfaces, sheared zones, sheared seams and crushed seams are generally faults in geological terms.
* SS = Soil Seam where not possible to determine origin
Healed defects are preceded by "healed"

Defect Planarity

Symbol	Description
PL	planar
CU	curved
UN	undulating
ST	stepped
IR	irregular

NOTE: where large scale waviness is observed it should be further described

Defect Roughness

Symbol	Description
vr	Very Rough
ro	Rough
sm	Smooth
po	Polished
sl	Slickensided

AECOM

Infill/Coating

Symbol	Description
cn	clean
sn	stained
vn	veneered
co	coated
op	open/voided
Ca	Calcium Carbonate
Fe	Iron Oxide
Ch	Chlorite
Qz	Quartz

Vesicularity

Symbol	Description	Porosity
D	Dense	Negligible
NV	Non-vesicular	< 10%
SV	Slightly vesicular	10 - 20%
HV	Highly vesicular	> 20%

Cementation and Duricrust

'Weakly cemented' soils are easily disaggregated by hand in air or water.

'Moderately cemented' soils require effort to disaggregate the soil by hand in air or water.

Consistent cementation throughout the material is classified as a 'Duricrust' and logged as a rock

Duricrust Mass Grade

Grade	Term	Description
DI	Massive or Hardspan	>90% duricrust rock forms continuous framework
DII	Vuggy or Patchy	50-90% duricrust rock forming continuous framework around soil(vuggy) or rock (patchy) materials
DIII	Nodular or Fragmental	<50% cemented gravel or cobble size nodules or fragments within soil (described as soil)

Carbonate Soils and Rocks

Rocks and soils with less than approximately 50% carbonate content as indicated by weak or sporadic effervescence in the presence of 10% HCl solution are prefixed 'Calcareous'.

Soils with >50% carbonate are prefixed 'Carbonate'.

Sedimentary Rocks comprising 90% or more carbonate are described using the appropriate rock type name (see rock description). Where carbonate content is 50% to <90%, the rock type is prefixed by 'IMPURE'.

Field Sampling and Testing Abbreviations

Symbol	Description
V	Uncorrected Borehole Vane Shear (kPa) – Peak/Residual
HV	Uncorrected Hand Vane Shear (kPa) – Peak/Residual
PP	Pocket Penetrometer (kPa)
SPT	Standard Penetration Test
N	Uncorrected SPT blow count for 300 mm
N*	SPT with sample collected
RW	SPT rod weight only (SPT N < 1)
HW	SPT rod and hammer weight (SPT N < 1)
HB	SPT Hammer Bouncing
FPM	Field Permeability
Lu	Lugeon/Packer Test (L/m/min)
$Is_{(50)}$(A)	Axial Point Load Strength Index (MPa)
$Is_{(50)}$(D)	Diametral Point Load Strength Index (MPa)
$Is_{(50)}$(I)	Irregular Point Load Strength Index (MPa)
U(X)	Undisturbed Sample (X) mm diameter
UP	Undisturbed Piston Sample
DS	Disturbed Sample
BS	Bulk Sample
E	Environmental Sample
RQD	Rock Quality Designation (%)

Symbol	Description
SCR	Solid Core Recovery (%)
TCR	Total Core Recovery (%)
DCP	Dynamic Cone Penetration Resistance (blows/100 mm)
PSP	Perth Sand Penetrometer Resistance (blows/ 150 mm)
PID	Photoionization Detector

Water

Symbol	Description
▼	Water level (static)
▽	Water level (during drilling)
▷	Water inflow
◁	Water outflow
◀	Complete water loss

Drilling Method

Drilling Method Symbol	Description
ADV	Auger Drilling – V-Bit (100mm)
AS	Auger Screwing
WB	Wash Boring
B	Blank Bit*
T	Tungsten Carbide Bit*
RR	Rock Roller/Tricone
DHH	Down Hole Hammer
PD	Percussion Drilling
CT	Cable Tool
HA	Hand Auger
DT	Diatube (114mm)
NMLC	NMLC Size Core – Triple Tube (50mm diameter)
NQ3, HQ3, PQ3	Wireline Size Core – Triple Tube (45mm, 61mm, 83mm diameter)
NQ, HQ, PQ	Wireline Size Core – Double Tube (48mm, 64mm, 85mm diameter)
RC	Reverse Circulation
CA	Casing Advancer
VC	Vibro Coring
SC	Sonic Coring
GP	Geoprobe Continuous Sampling

*Drill bit symbol used as suffix to drilling method symbol, e.g. ADV indicates auger drilling with V-bit

Drilling Support

Symbol	Description
U	Unsupported
C	Casing
M	Mud
W	Water

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Shane Merrell	Laboratory Technician	Newcastle - Inorganics, Mayfield West, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EK040: Poor matrix spike recovery due to matrix effect, to confirm duplicate sample was spiked giving the same poor recovery.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- NSW-WCG: Where reported, Total Chlorinated Hydrocarbons is the sum of the reported concentrations of all Chlorinated Hydrocarbons at or above the LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EG005T: Poor precision was obtained for Zinc on sample ES2337784 #1. Confirmed by re-digestion and reanalysis.
- EP080/EP074: Samples not received in a suitable time frame to conduct the analysis XXX within the recommended holding time.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 001-033. All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- EP075: Where reported, 'Sum of PAH' is the sum of the USEPA 16 priority PAHs
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP132: Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Inter-Laboratory Testing

Analysis conducted by ALS Newcastle, NATA accreditation no. 825, site no. 1656 (Chemistry / Biology).

(SOIL) EK040T: Fluoride Total

QUALITY CONTROL REPORT

Work Order	: **ES2337379**	Page	: 1 of 15
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: JAMES LOONEY	Contact	: Loren Schiavon
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: 60709736	Date Samples Received	: 30-Oct-2023
Order number	: 60709736 CDRL 1100	Date Analysis Commenced	: 07-Nov-2023
C-O-C number	: ----	Issue Date	: 02-Sep-2024
Sampler	: JAMES LOONEY		
Site	: WYONG TOWN CENTRE		
Quote number	: EN/004/23		
No. of samples received	: 23		
No. of samples analysed	: 6		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Shane Merrell	Laboratory Technician	Newcastle - Inorganics, Mayfield West, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH (1:5)	EA002	SOIL	In house: Referenced to Rayment and Lyons 4A1 and APHA 4500H+. pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM Schedule B(3).
Electrical Conductivity (1:5)	EA010	SOIL	In house: Referenced to Rayment and Lyons 3A1 and APHA 2510. Conductivity is determined on soil samples using a 1:5 soil/water leach. This method is compliant with NEPM Schedule B(3).
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Metals by ICPAES (Microwave Digestion)	EG005T-MW	SOIL	In house: Referenced to USEPA SW846 - 3051 (Microware Digestion); APHA 3120; USEPA SW846 - 6010. Metals in solids are determined following a microware digestion. The ICPAES technique ionizes selected elements. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass / charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS (Microwave Digestion)	EG035T-MW	SOIL	In house: Referenced to USEPA SW846 - 3051 (Microware Digestion); APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following a microware digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
WAD Cyanide by Segmented Flow Analyser	EK028SF	SOIL	In house: Referenced to APHA 4500-CN C&O / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Hydrogen cyanide is liberated from a slightly acidified (pH 4.5) and is dialysed. Tight cyanide complexes that would not be amenable to oxidation by chlorine are not converted. Iron cyanide complexes are precipitated with zinc acetate. Liberated HCN diffuses through a membrane into a stream of sodium hydroxide where it is carried as CN- The cyanide in caustic solution is buffered to pH 5.2 and further converted to cyanogen chloride by reaction with chloramine-T. Cyanogen chloride subsequently reacts with 4-pyridine carboxylic and 1,3-dimethylbarbituric acids to give a red colour complex. This colour is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride	EK040T	SOIL	(In-house) Total fluoride is determined by ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction (Silica Gel Clean Up)	EP071SG-S	SOIL	In house: Referenced to USEPA SW 846 - 8015. Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Low level CHC (SIM)	EP074E(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Semivolatile Organic Compounds	EP075	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Semivolatile Compounds by GCMS(SIM - Ultra-trace)	EP132	SOIL	In house: Referenced to USEPA 8270 GCMS Capiliary column, SIM mode.

Analytical Methods	Method	Matrix	Method Descriptions
Phenoxyacetic Acid Herbicides (LCMS - Standard DL)	EP202	SOIL	In house: LCMS (Electrospray in negative mode). Residues of acid herbicides are extracted from soil samples under the alkaline condition. An aliquot of the alkaline aqueous phase is taken and acidified before a SPE cleanup. After eluting off from the SPE cartridge, residues of acid herbicides are dissolved in HPLC mobile phase prior to instrument analysis.
NSW Waste Classification Guidelines - Aggregate Sums	* NSW-WCG	SOIL	In house: This method provides rounded sums for diverse trace organics to suit NSW Waste Classification Guidelines.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
Microwave Digest for Metals in Soils, Sediments and Sludges	EN31	SOIL	In house: Referenced to USEPA SW 846 - 3051. Microwave Assisted Nitric Acid Digestion 1.0g of sample is mixed with 10 mL conc. Nitric acid in a closed, high pressure vessel, and heated using a specific program. Digest is appropriate for selected metals analysis in sludge, sediments, soils and oils. This method is compliant with NEPM Schedule B(3).
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Extraction for Phenoxy Acid Herbicides in Soils.	EP202-PR	SOIL	In-House: Alkaline extract followed by SPE clean up of acidified portion of the sample extract.
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids/ Acetylation	ORG17A-AC	SOIL	In house: Mechanical agitation (tumbler). 20g of sample, Na2SO4 and surrogate are extracted with 150mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to 1 mL with exchange into cyclohexane. Phenolic compounds are reacted with acetic anhydride to yield phenyl acetates suitable for ultra-trace analysis.

Dates

Date Samples Received	: 30-Oct-2023 16:03	Issue Date	: 02-Sep-2024
Client Requested Due Date	: 10-Nov-2023	Scheduled Reporting Date	: **10-Nov-2023**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 2	Temperature	: 11.5'C, 0.5'C, -1.2'C - Ice present
Receipt Detail	:	No. of samples received / analysed	: 23 / 6

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Sample 14, QC400_28/10/23 and sample 15 QC400_29/10/23 was split into ALS spikes, blanks & spike controls**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Fluoride analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2337379-016 : [23-Oct-2023] : TSC - TRIP SPIKE CONTROL 15
ES2337379-019 : [23-Oct-2023] : TSC - TRIP SPIKE CONTROL 14

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Importance: High

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

Hi Loren,
Can you please schedule the following analysis:

ACM-TP03_0.5-06 – Waste Class (P-7/3 long) / ENM (P-18/1)

ACM-TP05_0.1-0.2 - Waste Class (P-7/3 long) / ENM (P-18/1)

ACM-TP08_0.5-0.6 - Waste Class (P-7/3 long) / ENM (P-18/1)

I assume there will be cost savings due to the duplication of analytes in the above mentioned suite? (i.e. less than the quote for each suite).

Thanks

Regards,

Mark Tiedeman

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EN33: Where leachable PFAS analysis is requested, centrifugation rather than pressure filtration is used as the default approach for removal of particulates, in line with AS 4439.3.

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

				Laboratory Duplicate (DUP) Report					
Laboratory sample ID	*Sample ID*	*Method: Compound*	*CAS Number*	*LOR*	*Unit*	*Original Result*	*Duplicate Result*	*RPD (%)*	*Acceptable RPD (%)*
EG005(ED093)C: Leachable Metals by ICPAES (QC Lot: 5465875)

ES2341104-009	Anonymous	EG005C: Arsenic	7440-38-2	0.1	mg/L	<0.1	<0.1	0.0	No Limit
		EG005C: Lead	7439-92-1	0.1	mg/L	4.6	4.6	0.0	0% - 20%

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report			
					Spike	Spike Recovery (%)	Acceptable Limits (%)	
Method: Compound	CAS Number	LOR	Unit	Result	Concentration	LCS	Low	High
EG005(ED093)C: Leachable Metals by ICPAES (QCLot: 5465875)								
EG005C: Arsenic	7440-38-2	0.1	mg/L	<0.1	0.1 mg/L	118	80.0	124
EG005C: Lead	7439-92-1	0.1	mg/L	<0.1	0.1 mg/L	112	80.0	118

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

				Matrix Spike (MS) Report			
				Spike	SpikeRecovery(%)	Acceptable Limits (%)

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	*Method*	*Matrix*	*Method Descriptions*
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Leachable Metals by ICPAES	EG005C	SOIL	In house: referenced to APHA 3120; USEPA SW 846 - 6010: The ICPAES technique ionises leachate sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM Schedule B(3).

Preparation Methods	*Method*	*Matrix*	*Method Descriptions*
Digestion for Total Recoverable Metals in TCLP Leachate	EN25C	SOIL	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
TCLP for Non & Semivolatile Analytes - Plastic Leaching Vessel	EN33a-P	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **This work order is a rebatch of samples 2,4 & 8 from work order ES2337379.**
- **Sample ID ACM-TP03_0.5-0.6 on the COC was received labelled as ACM-TP03_0.4-0.5 on the Asbestos bag.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Asbestos analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2341039-001 : [28-Oct-2023] : ACM-TP03_0.5-0.6 - ACM-TP03_0.4-0.5

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Hi Mark,

I'll arrange to have this testing added for you.

The packages would show up as a single line item in our system, but I will ask our invoicing team to manually adjust the invoices so as to avoid any duplications.

Thanks.

Kind regards,

right solutions. right partner.

Subject: [EXTERNAL] - RE: ES2337379 - COC ON HOLD
Importance: High

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

Hi Loren,
Can you please schedule the following analysis:

ACM-TP03_0.5-06 – Waste Class (P-7/3 long) / ENM (P-18/1)

ACM-TP05_0.1-0.2 - Waste Class (P-7/3 long) / ENM (P-18/1)

ACM-TP08_0.5-0.6 - Waste Class (P-7/3 long) / ENM (P-18/1)

I assume there will be cost savings due to the duplication of analytes in the above mentioned suite? (i.e. less than the quote for each suite).

Thanks

Regards,

Mark Tiedeman

Subject: FW: ES2337379 - COC ON HOLD

Hi Mark/Campbell,

See below CoC for Wyong from the weekend. Are you able to schedule the lab testing?

Thanks

Fahim Rashid

Subject: ES2337379 - COC ON HOLD

Hi Fahim,
Sample receipt has let me know of another work order we currently have on hold. Can you please provide an updated COC with analysis at your earliest convenience?
Thanks.

CERTIFICATE OF ANALYSIS

Work Order	: **ES2341790**	Page	: 1 of 34
Amendment	: **6**

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Aleksandar Vujkovic	Laboratory Technician	Newcastle - Inorganics, Mayfield West, NSW

Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG005T: Poor precision was obtained for Lead on sample ES2344316 #14. Confirmed by redigestion and reanalysis.
- EA155: Potentially asbestos containing bulk solid material was found in sample ES2341790-028 when conducting the FMT analysis and this will be tested separately as sample ES2341790-034.
- **EA200 Legend**
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: Analysis of asbestos from swabs and tapes is not covered under the current scope of NATA accreditation.
- EP080: Samples not received in a suitable time frame to conduct the analysis XXX within the recommended holding time.
- Amendment (22/01/2023): This report has been amended and re-released to allow the reporting of additional analytical data, for samples QC300_20231130 & QC300_20231101 previously on hold.
- Amendment (01/02/2024): This report has been amended and re-released to allow the reporting of additional analytical data, specifically method EG005T, EG035T, and EA155 for samples 022, and 028.
- Amendment (08/02/2024): This report has been amended and re-released to allow the reporting of additional analytical data, specifically method EA200B on sample A-BH16B_0.0-1.0 fragment.
- Amendment (21/02/2024): This report has been amended and re-released to allow the reporting of additional analytical data, specifically EA155-ENM for sample 28, A-BH16B_0.0-1.0

- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 002, 022-025, 028-031, 034. All analysis results are as per the previous report.
- Amendment (22/12/2023): This report has been amended following the addition of analysis to samples previously on HOLD as an updated COC has been provided by Eric Serttas.
- EA200N: Asbestos weights and percentages are not covered under the Scope of NATA Accreditation.
  Weights of Asbestos are based on extracted bulk asbestos, fibre bundles, and/or ACM and do not include respirable fibres (if present)
  The Asbestos (Fines and Fibrous) weight is calculated from the extracted Fibrous Asbestos and Asbestos Fines as an equivalent weight of 100% Asbestos
  Percentages for Asbestos content in ACM are based on the 2013 NEPM default values.
  All calculations of percentage Asbestos under this method are approximate and should be used as a guide only.
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200N: ALS laboratory procedures and methods used for the identification and quantitation of asbestos are consistent with AS4964-2004 and the requirements of the 2013 NEPM for Assessment of Site Contamination
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H+ + Al3+).
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EA200: N/A - Not Applicable

Sampler	: AECOM Geotech Team		
Site	: WYONG		
Quote number	: ME/624/21 - AMPOL		
No. of samples received	: 34		
No. of samples analysed	: 21		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2341790**	Page	: 1 of 13
Amendment	: **6**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Telephone	: +6138549 9645
Project	: 60709736 - CDRL 400	Date Samples Received	: 01-Dec-2023
Site	: WYONG	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team	No. of samples received	: 34
Order number	: 60709736 - CDRL 400	No. of samples analysed	: 21

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH (1:5)	EA002	SOIL	In house: Referenced to Rayment and Lyons 4A1 and APHA 4500H+. pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM Schedule B(3).
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Foreign Material Content	EA155	SOIL	In house: Referenced to RTA T276. Foreign Material Content
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Asbestos Classification and Quantitation per NEPM 2013	* EA200N	SOIL	Asbestos Classification and Quantitation per NEPM with Confirmation of Identification by AS 4964 - Gravimetric determination of Asbestos Containing Material, Fibrous Asbestos, Asbestos Fines and sample weight and calculation of percentage concentrations per NEPM protocols. Asbestos (Fines and Fibrous FA+AF) is reported as the equivalent weight in the sample received after accounting for sub-sampling (where applicable for the <7mm and/or <2mm fractions).
Exchangeable Cations	ED007	SOIL	In house: Referenced to Rayment & Lyons Method 15A1. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM Schedule B(3).
Exchangeable Cations with pre-treatment	ED008	SOIL	In house: Referenced to Rayment & Lyons Method 15A2. Soluble salts are removed from the sample prior to analysis. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).

Analytical Methods	Method	Matrix	Method Descriptions
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Asbestos Identification in Bulk Solids	EA200	SOLID	In house: Referenced to AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Pesticides by GCMS	EP068	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
Exchangeable Cations Preparation Method	ED007PR	SOIL	In house: Referenced to Rayment & Lyons method 15A1. A 1M NH4Cl extraction by end over end tumbling at a ratio of 1:20. There is no pretreatment for soluble salts. Extracts can be run by ICP for cations.
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which indicates the addition of FMT analysis to sample 29.
- This is an updated SRN which indicates the new scheduled release date for this work order.
- **FMT bags for samples #003, 010, 014, 017 not received. Clay Content analysis can't be conducted for samples #003, 010 & 017.**
- **Sample #20 'QC300_20231130' & #21 'QC300_20231201' are unable to be analysed due to all sample containers missing.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- Sample A-BH14_2.0-3.0 was not received due to the following reason: Not received
- **Asbestos, FMT, PSD analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2341790-032 : [01-Dec-2023] : QC100_011223 - Received as extra
ES2341790-033 : [01-Dec-2023] : QC200_011223 - Received as extra

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Proactive Holding Time Report

The following table summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory.

Matrix: **SOIL** Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Client Sample ID(s)	Container	Due for extraction	Due for analysis	Samples Received		Instructions Received	
				Date	Evaluation	Date	Evaluation
EA002: pH (1:5)							
R-BH20B_1.5-1.6	Soil Glass Jar - Unpreserved	07-Dec-2023	12-Dec-2023	01-Dec-2023	✓	08-Dec-2023	×

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

Hi ALS,

Can you please analyse;

- QC300_20231130 for TRH/BTEXN/8 Metals, and
- QC300_20231101 for TRH/BTEXN/PAH/Ph/OC/OP/PCB/8 metals.

Please proceed with the analysis on standard TAT.

Thank you,

Eric Serttas
He / Him

Receipt Detail	:	No. of samples received / analysed	: 20 / 8

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which indicates the addition of asbestos analysis for sample 1.
- This is an updated SRN which indicates the new scheduled release date for this work order.
- **Asbestos bags have been compromised and contaminated as bags were not closed properly or had holes.**
- **Samples QC300_20231204, A-BH09_2.0-3.0, A-BH09_3.0_4.0 and QC300_20231207 were not received.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **The final report will be completed by the scheduled reporting date listed in this SRN. A Preliminary report will be available on 19/12/2023 with the exception of asbestos analysis**
- **Asbestos analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 004, 016-019. All analysis results are as per the previous report.
- EA200N: Asbestos weights and percentages are not covered under the Scope of NATA Accreditation.
  Weights of Asbestos are based on extracted bulk asbestos, fibre bundles, and/or ACM and do not include respirable fibres (if present)
  The Asbestos (Fines and Fibrous) weight is calculated from the extracted Fibrous Asbestos and Asbestos Fines as an equivalent weight of 100% Asbestos
  Percentages for Asbestos content in ACM are based on the 2013 NEPM default values.
  All calculations of percentage Asbestos under this method are approximate and should be used as a guide only.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200N: ALS laboratory procedures and methods used for the identification and quantitation of asbestos are consistent with AS4964-2004 and the requirements of the 2013 NEPM for Assessment of Site Contamination

- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.

No. of samples analysed	: 8		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report			
					Spike	Spike Recovery (%)	Acceptable Limits (%)	
Method: Compound	CAS Number	LOR	Unit	Result	Concentration	LCS	Low	High

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2343534**	Page	: 1 of 11
Amendment	: **2**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 08-Dec-2023
Site	: Wyong	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech	No. of samples received	: 20
Order number	: 60709736	No. of samples analysed	: 8

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Asbestos Classification and Quantitation per NEPM 2013	* EA200N	SOIL	Asbestos Classification and Quantitation per NEPM with Confirmation of Identification by AS 4964 - Gravimetric determination of Asbestos Containing Material, Fibrous Asbestos, Asbestos Fines and sample weight and calculation of percentage concentrations per NEPM protocols. Asbestos (Fines and Fibrous FA+AF) is reported as the equivalent weight in the sample received after accounting for sub-sampling (where applicable for the <7mm and/or <2mm fractions).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Buchi Ammonia	EK055	SOIL	In house: Referenced to APHA 4500-NH3 B&G, H Samples are steam distilled (Buchi) prior to analysis and quantified using titration, FIA or Discrete Analyser.
Nitrite as N - Soluble by Discrete Analyser	EK057G	SOIL	In house: Referenced to APHA 4500-NO3- B. Nitrite in a water extract is determined by direct colourimetry by Discrete Analyser.
Nitrate as N - Soluble by Discrete Analyser	EK058G	SOIL	In house: Referenced to APHA 4500-NO3- F. Nitrate in the 1:5 soil:water extract is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results.
Nitrite and Nitrate as N (NOx)- Soluble by Discrete Analyser	EK059G	SOIL	In house: Thermo Scientific Method D08727 and NEMI (National Environmental Method Index) Method ID: 9171. This method covers the determination of total oxidised nitrogen (NOx-N) and nitrate (NO3-N) by calculation, Combined oxidised Nitrogen (NO2+NO3) in a water extract is determined by direct colourimetry by Discrete Analyser.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).

Analytical Methods	Method	Matrix	Method Descriptions
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of reagent grade water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)

Preparation Methods	*Method*	*Matrix*	*Method Descriptions*
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG020: Poor matrix spike recovery was obtained for Copper on sample ES2343141-#001. Confirmed by reanalysis.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 008-014, . All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.

Sampler	: AECOM Geotech Team		
Site	: Wyong		
Quote number	: EN/004/23		
No. of samples received	: 14		
No. of samples analysed	: 7		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

Contact	: Eric Serttas	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 14-Dec-2023
Site	: Wyong	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team	No. of samples received	: 14
Order number	: 60709736_1.0	No. of samples analysed	: 7

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
Polychlorinated Biphenyls (PCB)	EP066	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Pesticides by GCMS	EP068	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Sample ID R-BH26A_0.0-0.2 & R-BH26A_0.5-0.8 was not received.**
- **Sample 14 received as extra.**
- **The sampling date listed on the COC is 08/12/23, however the bottles were all dated 28/11/23 for samples 11 and 12.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2343795-008 : [08-Dec-2023] : QC100_20231208 - NULL
ES2343795-009 : [07-Dec-2023] : QC200_20231208 - NULL

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which indicates the addition of analysis as per updated COC.
- **TRH(SV)/PAH cannot be conducted for sample 11 as no orange amber bottle was provided.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Asbestos analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2343853-006 : [13-Dec-2023] : QC300_20231213 - NULL
ES2343853-011 : [14-Dec-2023] : QC300_20231214 - NULL
ES2343853-014 : [11-Dec-2023] : Trip Control Spike - 9

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP080: Poor duplicate precision due to sample heterogeneity. Confirmed by re-extraction and re-analysis.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 006, 011-013, . All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.

- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Order number	: 60709736	Date Analysis Commenced	: 21-Dec-2023
C-O-C number	: ----	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team		
Site	: Wyong		
Quote number	: EN/004/23		
No. of samples received	: 14		
No. of samples analysed	: 5		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 14-Dec-2023
Site	: Wyong	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team	No. of samples received	: 14
Order number	: 60709736	No. of samples analysed	: 5

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Duplicate (DUP) RPDs							
EP080/071: Total Recoverable Hydrocarbons - NEPM 2	ES2343935--001	Anonymous	**C6 - C10 Fraction**	C6_C10	94.5 %	0% - 50%	**RPD exceeds LOR based limits**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).

Preparation Methods	*Method*	*Matrix*	*Method Descriptions*
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- **EA200 Legend**
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: Analysis of asbestos from swabs and tapes is not covered under the current scope of NATA accreditation.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 001, 005, 009, 021, 024-025. All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2

- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EA200: N/A - Not Applicable
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QUALITY CONTROL REPORT

Work Order	: **ES2343854**	Page	: 1 of 19
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Contact	: Loren Schiavon
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 14-Dec-2023
Order number	: 60709736	Date Analysis Commenced	: 22-Dec-2023
C-O-C number	: ----	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team		
Site	: Wyong		
Quote number	: EN/004/23		
No. of samples received	: 28		
No. of samples analysed	: 10		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2343854**	Page	: 1 of 10
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 14-Dec-2023
Site	: Wyong	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team	No. of samples received	: 28
Order number	: 60709736	No. of samples analysed	: 10

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.
Asbestos Identification in Bulk Solids	EA200	SOLID	In house: Referenced to AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.

Analytical Methods	Method	Matrix	Method Descriptions
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.4, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Date Samples Received	: 14-Dec-2023 19:00	Issue Date	: 02-Sep-2024
Client Requested Due Date	: 04-Jan-2024	Scheduled Reporting Date	: **04-Jan-2024**

Delivery Details

Mode of Delivery	: Client Drop Off	Security Seal	: Not Available
No. of coolers/boxes	: 2	Temperature	: 16.4'C, 17.2'C, 15.9'C - Ice Bricks present
Receipt Detail	: Large esky	No. of samples received / analysed	: 28 / 10

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- This is an updated SRN which indicates the addition of analysis as per updated COC.
- **MIS-SOL: Coal tar analysis to be conducted by Envirolab.**
- **Asbestos analysis cannot be done for sample 12 'A-BH03_0.0-0.2' as not bag was received.**
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Asbestos analysis will be conducted by ALS Newcastle.**
- Please direct any queries you have regarding this work order to the above ALS laboratory contact.
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (3 weeks), Solid (2 months ± 1 week) from receipt of samples.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

ES2343854-005 : [12-Dec-2023] : QC300_20231212 - NULL
ES2343854-026 : [11-Dec-2023] : Trip Spike Control - 7
ES2343854-028 : [11-Dec-2023] : Trip Spike Control - 8

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Sampler	: AECOM Geotech Team		
Site	: Wyong		
Quote number	: EN/004/23		
No. of samples received	: 20		
No. of samples analysed	: 14		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Aleksandar Vujkovic	Laboratory Technician	Newcastle - Inorganics, Mayfield West, NSW
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Dian Dao	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP080/EP074: Samples not received in a suitable time frame to conduct the analysis within the recommended holding time.
- EP080: Samples not received in a suitable time frame to conduct the analysis within the recommended holding time.
- Amendment (02/09/2024): This report has been amended as a result of a request to change sample identification numbers (IDs) received from Fahim Rashid on 29/08/2024, for samples 010-012, 017-019. All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- EA200N: Asbestos weights and percentages are not covered under the Scope of NATA Accreditation.
  Weights of Asbestos are based on extracted bulk asbestos, fibre bundles, and/or ACM and do not include respirable fibres (if present)
  The Asbestos (Fines and Fibrous) weight is calculated from the extracted Fibrous Asbestos and Asbestos Fines as an equivalent weight of 100% Asbestos
  Percentages for Asbestos content in ACM are based on the 2013 NEPM default values.
  All calculations of percentage Asbestos under this method are approximate and should be used as a guide only.

- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200N: ALS laboratory procedures and methods used for the identification and quantitation of asbestos are consistent with AS4964-2004 and the requirements of the 2013 NEPM for Assessment of Site Contamination
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H+ + Al3+).
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Contact	: Loren Schiavon
Address	: LEVEL 21 420 GEORGE STREET SYDNEY NSW, AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 19-Dec-2023
Order number	: 60709736	Date Analysis Commenced	: 22-Dec-2023
C-O-C number	: ----	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team		
Site	: Wyong		
Quote number	: EN/004/23		
No. of samples received	: 20		
No. of samples analysed	: 14		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Aleksandar Vujkovic	Laboratory Technician	Newcastle - Inorganics, Mayfield West, NSW
Ankit Joshi	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Dian Dao	Senior Chemist - Inorganics	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2344222**	Page	: 1 of 14
Amendment	: **1**		
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: Eric Serttas	Telephone	: +61 2 8784 8555
Project	: 60709736 - CDRL 400	Date Samples Received	: 19-Dec-2023
Site	: Wyong	Issue Date	: 02-Sep-2024
Sampler	: AECOM Geotech Team	No. of samples received	: 20
Order number	: 60709736	No. of samples analysed	: 14

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.
