

New South Wales (NSW) is making a record investment in transport infrastructure, services and technology to make way for the future and respond to new and emerging technologies.

- We have legislation in place that enables the trialling and deployment of highly and fully automated vehicles on the state's roads, providing flexibility to operate a single vehicle or a fleet of fully automated vehicles (including heavy vehicles) for any period on any road in the state.
- We were also an early adopter of innovation in point to point transport systems, with a legislative framework which would permit commercial automated ride share passenger services in NSW.

We want to partner with industry, start-ups and researchers from around the world to understand how we can enable our vision for a connected and automated future that benefits our customers.

## Working with us in NSW is just 4 simple steps away

### 1 Contact the Future Mobility Team

Transport for NSW's Future Mobility Team will guide you through the process to gain approval and get your vehicles on the road.

[Contact us](#) with details such as intended trial scope, location and type of technology to get the conversation started.

### 2 Consider the NSW regulatory landscape and National Guidelines

We will help you understand [National Trial Guidelines](#), vehicle import approval [processes](#) and the relevant NSW enabling legislation for [Automated Vehicle Trials](#) and [Point to Point Transport](#).

### 3 Demonstrate safety

We will seek evidence to demonstrate how your trial will operate safely in the selected local environment. This can include evidence from previous trials and other safety assurance processes or initiatives.

Our Safety Assurance Framework is available on request.

### 4 Approval

Based on the information provided through these steps your trial will be approved with certain conditions of operation.

An example trial approval can be seen [here](#).
