

# Power Supply Upgrade

## DC Feeder Upgrade Project – Newtown

### Community Notification – May 2022

Transport for NSW is making improvements to electrical infrastructure to meet expected power requirements for Sydney's future rail network and new fleet of air-conditioned trains. As part of this, Transport for NSW is carrying out power supply upgrade work through our DC Feeder Upgrade Project.

### Project overview

The DC Feeder Upgrade Project will improve power delivery to the railway and involves the replacement of electrical cables and overhead wiring infrastructure across a number of sites in the rail network, including at Newtown.

### Weekend work

Construction work will take place from **7am to 6pm on Saturday 14 May 2022**. Please see work location map overleaf for details on the work area.

These works are in line with current Public Health Orders and a COVID-19 Safe Plan is in place for all activity in the work area, including masks and QR codes.

**The work in your area will not be continuous. Every effort will be made to keep the construction noise to a minimum and reduce impacts to the community whenever possible.**

Work activities include structure and footing investigation and drilling. Workers will access the corridor from Station Street, Newtown.

Equipment will include a generator, auger drill rig and various handheld power tools.

### What you may notice

Transport for NSW is committed to minimising noise impacts on the community. We switch off equipment when it is not being used, place equipment as far away from properties as possible and monitor our work activities to make sure noise levels are being managed effectively.

### Keeping the community informed

If you would like to speak with the project team about this work, please contact TfNSW through the details provided below. Thank you for your patience and understanding during these important upgrades to the rail network.
