

# AC Feeder Upgrade – Sefton and Birrong

## Power Supply Upgrade

May 2023

Transport for NSW acknowledges the Darug and Eora Nations as the Traditional Custodians of the lands on which we work and pay respects to Elders past and present.

The AC Feeder Upgrade Project is part of the Power Supply Upgrade which is designed to meet expected power requirements for Sydney's future rail network and the new fleet of airconditioned trains. The work involves upgrades to substations, section huts, overhead wiring, and feeders as well as the construction of new infrastructure across the network.

### What work are we doing?

In our recent community notification about the AC Feeder power supply upgrade work at Sefton, Birrong and Yagoona, we informed you of works taking place in May 2023. Further to this notification, out-of-hours work is now confirmed and is detailed below.

### Before the weekend, during standard construction hours, we will be:

- establishing our temporary work sites
- delivering machinery and materials to temporary work sites
- trimming and removing vegetation
- using an auger (a specialised drill) to pre-drill holes for new power poles, stay poles and new earthing rods. Temporary covers will be placed over the holes and temporary fencing will be placed around the holes for safety until the new power poles are installed.

### Weekend work

Weekend working hours will be **6am to 6pm Saturday 20 May and Sunday 21 May 2023** for the main work inside the rail corridor at **Sefton Triangle**, including two

locations near Auburn Road. Testing and commissioning will be from 6pm Sunday to 2am Monday 22 May.

Weekend work will include:

- replacing poles
- restringing conductors (wires)
- defect rectification works
- restoring locations
- testing and commissioning services.

A map of the work area is shown on the next page.

### What will this mean for you?

Access to properties will not be affected. For your safety, please follow the direction of traffic controllers in attendance.

You may notice construction vehicle movements within and near the rail corridor work areas and there may be some daytime noise. We apologise for any inconvenience this work may cause.

### Equipment to be used

Machinery and equipment expected to be used include cranes, elevated work platforms, service and delivery vehicles, electrical and hand tools.
