

DC Feeder Upgrade Project – Ashfield

Power Supply Upgrade

July 2023

Transport for NSW acknowledges the Gadigal and Wangal people as the Traditional Custodians of the lands on which we work and pay respects to Elders past and present.

Transport for NSW is making improvements to electrical infrastructure to meet expected power requirements for Sydney's future rail network and new fleet of air-conditioned trains. As part of this, Transport for NSW is carrying out power supply upgrade work through our DC Feeder Upgrade Project.

What work are we doing?

The DC Feeder Upgrade Project will improve power delivery to the railway across a number of sites on the rail network, including at Ashfield. In July 2023, the project team will install cables, overhead wiring and metal fixings inside the rail corridor. In connection with the work, there will be a temporary site compound established and vegetation removal inside the rail corridor near the site access points on Alt Street and Nixon Avenue.

When and where we'll be working?

Standard construction hours are between **7am and 6pm Monday to Friday and 8am and 1pm on Saturdays**. Some work will take place outside these hours from **10pm Friday 14 July through to 2am Monday 17 July 2023**.

We schedule work outside of standard construction hours to take place during Sydney Trains trackwork periods when no trains are running, minimising disruptions to commuter services and improving the safety of our construction team and customers.

Workers will access the rail corridor and site compound from Alt Street, Nixon Avenue and the corner of Station and Wood streets, Ashfield. Please refer to the map overleaf for the work area.

What will this mean for you?

You may notice:

- increased workers and vehicles
- noise from machinery and equipment
- traffic controllers on Alt Street, Ashfield.

Managing our impacts

We understand construction activities may cause disruption for the community and thank you for your patience during the upcoming work. We'll seek to minimise impacts as much as possible and adhere to strict environmental conditions relating to noise, vibration and dust management.
